Featuring helpful checklists, templates and photocopiable resources, this book provides guidance and practical strategies for identifying and supporting young people with dyslexia that will be of use to teachers, TAs, SENCOs and other educational professionals.

AI and education Miao, Fengchun,Holmes, Wayne,Ronghuai Huang,Hui Zhang,UNESCO,2021-04-08 Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovate teaching and learning practices, and ultimately accelerate the progress towards SDG 4. However, these rapid technological developments inevitably bring multiple risks and challenges, which have so far outpaced policy debates and regulatory frameworks. This publication offers guidance for policy-makers on how best to leverage the opportunities and address the risks, presented by the growing connection between AI and education. It starts with the essentials of AI: definitions, techniques and technologies. It continues with a detailed analysis of the emerging trends and implications of AI for teaching and learning, including how we can ensure the ethical, inclusive and equitable use of AI in education, how education can prepare humans to live and work with AI, and how AI can be applied to enhance education. It finally introduces the challenges of harnessing AI to achieve SDG 4 and offers concrete actionable recommendations for policy-makers to plan policies and programmes for local contexts. A Whole New Mind Daniel H. Pink,2006-03-07 New York Times Bestseller An exciting--and encouraging--exploration of creativity from the author of *When: The Scientific Secrets of Perfect Timing* The future belongs to a different kind of person with a different kind of mind: artists, inventors, storytellers-creative and holistic right-brain thinkers whose abilities mark the fault line between who gets ahead and who doesn't. Drawing on research from around the world, Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*) outlines the six fundamentally human abilities that are absolute essentials for professional success and personal fulfillment--and reveals how to master them. *A Whole New Mind* takes readers to a daring new place, and a provocative and necessary new way of thinking about a future that's already here.

The Unspoken Rules Gorick Ng,2021-04-27 Named one of 10 Best New Management Books for 2022 by Thinkers50 A Wall Street Journal Bestseller ...this guide provides readers with much more than just early careers advice; it can help everyone from interns to CEOs. — a Financial Times top title You've landed a job. Now what? No one tells you how to navigate your first day in a new role. No one tells you how to take ownership, manage expectations, or handle workplace politics. No one tells you how to get promoted. The answers to these professional unknowns lie in the unspoken rules—the certain ways of doing things that managers expect but don't explain and that top performers do but don't realize. The problem is, these rules aren't taught in school. Instead, they get passed down over dinner or from mentor to mentee, making for an unlevel playing field, with the insiders getting ahead and the outsiders stumbling along through trial and error. Until now. In this practical guide, Gorick Ng, a first-generation college student and Harvard career adviser, demystifies the unspoken rules of work. Ng distills the wisdom he has gathered from over five hundred interviews with professionals across industries and job types about the biggest mistakes people make at work. Loaded with frameworks, checklists, and talking points, the book provides concrete strategies you can apply immediately to your own situation and will help you navigate inevitable questions, such as: How do I manage my time in the face of conflicting priorities? How do I build relationships when I'm working remotely? How do I ask for help without looking incompetent or lazy? *The Unspoken Rules* is the only book you need to perform your best, stand out from your peers, and set yourself up for a fulfilling career.

Educational Research John W. Creswell,2015 Educational Research: Planning, Conducting, and Evaluating Quantitative and Qualitative Research offers a truly balanced, inclusive, and integrated overview of the processes involved in educational research. This text first examines the general steps in the research process and then details the procedures for conducting specific types of quantitative, qualitative, and mixed methods studies. Direct guidance on reading research is offered throughout the text, and interactive features provide opportunities for practice.--Publisher's description.

Developing Reading and Writing in Second-language Learners Diane August,Timothy Shanahan,2008 Reporting the findings of the National Literacy Panel on Language-Minority Children and Youth, this book concisely summarises what is known from empirical research about the development of literacy in language-minority children and youth, including development, environment, instruction, and assessment.

Practical Research Paul D. Leedy,Jeanne Ellis Ormrod,2013-07-30 For undergraduate or graduate courses that include planning, conducting, and evaluating research. A do-it-yourself, understand-it-yourself manual designed to help students understand the fundamental structure of research and the methodical process that leads to valid, reliable results. Written in uncommonly engaging and elegant prose, this text guides the reader, step-by-step, from the selection of a problem, through the process of conducting authentic research, to the preparation of a completed report, with practical suggestions based on a solid theoretical framework and sound pedagogy. Suitable as the core text in any introductory research course or even for self-instruction, this text will show students two things: 1) that quality research demands planning and design; and, 2) how their own research projects can be executed effectively and professionally.

Writing Your Journal Article in Twelve Weeks Wendy Laura Belcher,2009-01-20 This book provides you with all the tools you

need to write an excellent academic article and get it published.

How People Learn II National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on How People Learn II: The Science and Practice of Learning, 2018-09-27 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Assessment and Feedback in Higher Education: A Guide for Teachers Teresa McConlogue, 2020-05-01 Teachers spend much of their time on assessment, yet many higher education teachers have received minimal guidance on assessment design and marking. This means assessment can often be a source of stress and frustration. *Assessment and Feedback in Higher Education* aims to solve these problems. Offering a concise overview of assessment theory and practice, this guide provides teachers with the help they need.

Learning, Creating, and Using Knowledge Joseph D. Novak, 2010-02-02 This fully revised and updated edition of *Learning, Creating, and Using Knowledge* recognizes that the future of economic well being in today's knowledge and information society rests upon the effectiveness of schools and corporations to empower their people to be more effective learners and knowledge creators. Novak's pioneering theory of education presented in the first edition remains viable and useful. This new edition updates his theory for meaningful learning and autonomous knowledge building along with tools to make it operational – that is, concept maps, created with the use of CMapTools and the V diagram. The theory is easy to put into practice, since it includes resources to facilitate the process, especially concept maps, now optimised by CMapTools software. CMapTools software is highly intuitive and easy to use. People who have until now been reluctant to use the new technologies in their professional lives will find this book particularly helpful. *Learning, Creating, and Using Knowledge* is essential reading for educators at all levels and corporate managers who seek to enhance worker productivity.

National Education Technology Plan Arthur P. Hershaft, 2011 Education is the key to America's economic growth and prosperity and to our ability to compete in the global economy. It is the path to higher earning power for Americans and is necessary for our democracy to work. It fosters the cross-border, cross-cultural collaboration required to solve the most challenging problems of our time. The National Education Technology Plan 2010 calls for revolutionary transformation. Specifically, we must embrace innovation and technology which is at the core of virtually every aspect of our daily lives and work. This book explores the National Education Technology Plan which presents a model of learning powered by technology, with goals and recommendations in five essential areas: learning, assessment, teaching, infrastructure and productivity.

Improving Adult Literacy Instruction National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Learning Sciences: Foundations and Applications to Adolescent and Adult Literacy, 2012-04-26 A high level of literacy in both print and digital media is required for negotiating most aspects of 21st-century life, including supporting a family, education, health, civic participation, and competitiveness in the global economy. Yet, more than 90 million U.S. adults lack adequate literacy. Furthermore, only 38 percent of U.S. 12th graders are at or above proficient in reading. *Improving Adult Literacy Instruction* synthesizes the research on literacy and learning to improve literacy instruction in the United States and to recommend a more systemic approach to research, practice, and policy. The book focuses on individuals ages 16 and older who are not in K-12 education. It identifies factors that affect literacy development in adolescence and adulthood in general, and examines their implications for strengthening literacy instruction for this population. It also discusses technologies for learning that can assist with multiple aspects of teaching, assessment, and accommodations for learning. There is inadequate knowledge about effective instructional practices and a need for better assessment and ongoing monitoring of adult students' proficiencies, weaknesses, instructional environments, and progress, which might guide instructional planning. *Improving Adult Literacy Instruction* recommends a program of research and innovation to validate, identify the boundaries of, and extend current knowledge to improve instruction for adults and adolescents outside school. The book is a valuable resource for curriculum developers, federal agencies such as the Department of Education, administrators, educators, and funding agencies.

Working with Academic Literacies Theresa Lillis, Kathy Harrington, 2015-11-04 The editors and contributors to this collection explore what it means to adopt an “academic literacies” approach in policy and pedagogy. Transformative practice is illustrated through case studies and critical commentaries from teacher-researchers working in a range of higher education contexts—from undergraduate to postgraduate levels, across disciplines, and spanning geopolitical regions including Australia, Brazil, Canada, Cataluña, Finland, France, Ireland, Portugal, South Africa, the United Kingdom, and the United States.

OECD Reviews of Evaluation and Assessment in Education Synergies for Better Learning An International Perspective on Evaluation and Assessment OECD, 2013-04-11 This report provides an international comparative analysis and policy advice to countries on how evaluation and assessment arrangements can be embedded within a consistent framework to improve the quality, equity and efficiency of school education.

How People Learn National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Developments in the Science of Learning with additional material from the Committee on Learning Research and Educational Practice, 2000-08-11 First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children

learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Evidence Check 1, 2009 This report (HCP 44, session 2009-10, ISBN 9780215542663) from the Science and Technology Committee looks at literacy programmes evidence check and concludes that expectations by the Department for Children, Schools and Families of the quality of the evidence base for reading programmes are worryingly low. It urges the Government to commission randomised controlled trials (RCTs). The Committee also states it is particularly concerned about the quality of evidence demonstrating cost-effectiveness of different programmes and further recommends that the Government reviews its guidelines on RCT design; it says even Wikipedia is more thorough and informative. The Committee also concludes, that: the Government's focus on early literacy interventions and phonics-based teaching is based on the best available evidence; the use of Reading Recovery is based on a lower quality of evidence than the Committee is comfortable with and that the decision to introduce Reading Recovery nationally is not evidence based. The Committee further expressed alarm that there was a complete lack of randomised controlled trials using standardised test scores for the Reading Recovery programme in the UK school system, before national implementation of the programme.
