The Sea David Farrell Krell,2019-02-27 Humankind has a profound and complex relationship with the sea, a relationship that is extensively reflected in biology, psychology, religion, literature and poetry. The sea cradles and soothes us, we visit it often for solace and inspiration, it is familiar, being the place where life ultimately began. Yet the sea is also dark and mysterious and often spells catastrophe and death. The sea is a set of contradictions: kind, cruel, indifferent. She is a blind will that will 'have her way'. In exploring this most capricious of phenomena, David Farrell Krell engages the work of an array of thinkers and writers including, but not limited to, Homer, Thales, Anaximander, Heraclitus, Plato, Aristotle, Hölderlin, Melville, Woolf, Whitman, Nietzsche, Heidegger, Schelling, Ferenczi, Rank and Freud. The Sea explores the significance in Western civilization of the catastrophic and generative power of the sea and what humankind's complex relationship with it reveals about the human condition, human consciousness, temporality, striving, anxiety, happiness and mortality.

Biochemistry of Brain Sudhir Kumar,2013-10-22 Biochemistry of Brain is a collection of articles dealing with the developments in the biochemistry of the brain. This book gives a comprehensive and critical discussion of important developments in studies concerning the above subject. This text discusses the structure, function, and metabolism of glycosphingolipids, which are related to the study of sphingolipid storage diseases. Inborn defects of metabolism are found in Gaucher's and Fabry's disease, which are characterized by lipid accumulation in the brain. Another paper reviews the chemical and genetics of critically lysosomal hydrolase deficiencies that can cause the storage of sphingolipids. This book then explains the role of myelin basic protein in lipids in vivo that the weak bonding of the protein is not a major component of myelin stability. Another paper discusses the procedures for isolating subfractions of myelin and myelin-related membranes, with some attention given on the alterations in the subfractionation of myelin in pathological hypomyelinating and demyelinating conditions. Another article discusses the biochemical and enzymatic composition of lysosomes and the biosynthesis, intracellular transport, storage, and the degradation of lysosomal constituents. This collection of papers will benefit scientists doing research in microbiology, microchemistry, molecular genetics, and neurochemistry.

Environmental Security and Ecoterrorism Hami Alpas, Simon M. Berkowicz, Irina Ermakova,2011-05-19 In recent years, the concept of environmental security has been adapted to include preparedness for acts of ecoterrorism. This latter term has now become synonymous with environmental terrorism where the perpetrator uses the environment as a weapon to harm an opponent. The intended outcome is usually large-scale deaths, severe damage to the environment, and instilling fear in the general population. This book explores various facets of ecoterrorism including the role of the state in pursuing and maintaining environmental security, a review of the concept of ecoterrorism, food security challenges and weaknesses, technological countermeasures to

enable rapid detection or response, and existing pollution sources and hazards that may serve as targets for terrorist acts. In sum, this volume provides a useful overview for both the layperson and experienced researchers.

Parallel Logic Programming Evan Tick,1991 Highly parallel machines have been available for many years but, because advances in hardware have always outpaced progress in software development, designers and users of these machines have yet to realize their full potential. Until recently there have been few, if any, high-class parallel programming languages that could be implemented on the wide variety of parallel processing systems in use. This book helps to redress the balance by teaching programming techniques as well as performance analysis of parallel programming languages and architectures using logic programming; specifically, it focuses on the Prolog-like languages OR-parallel Prolog and AND-parallel FGHC. Parallel Logic Programming brings to light practical applications of a previously esoteric/theoretical area of parallel logic programming and is unique in presenting programming hand-in-hand with performance analysis of real empirical measurements. Its quantitative approach to symbolic parallel programming provides students and professionals with tools for implementing and critically evaluating larger projects. The book includes useful chapter summaries, programming projects, and a glossary.

Admixtures in Crystallization Jaroslav Nyvlt,Joachim Ulrich,2008-07-11 This unique book is the most exhaustive and up-to-date treatment of the subject of admixtures in crystallization available today. The introduction, particularly suitable for newcomers but also helpful for more advanced readers, discusses concisely current theory and experience and provides about 250 references for further reading. The main section provides a detailed survey of the effects of over 200 organic and inorganic admixtures on the crystallization of over 300 organic and inorganic substances. The data, which has been gathered together from almost all the available papers, books and journals, are presented in accessible tables alongside the more than 1600 relevant literature references. Chemists and chemical engineers, whether in education, research, or production, are sure to find this book an indispensable reference work.

Cholesterol Binding and Cholesterol Transport Proteins: J. Robin Harris,2010-03-10 Knowledge of cholesterol and its interaction with protein molecules is of fundamental importance in both animal and human biology. This book contains 22 chapters, dealing in depth with structural and functional aspects of the currently known and extremely diverse unrelated families of cholesterol-binding and cholesterol transport proteins. By drawing together this range of topics the Editor has attempted to correlate this broad field of study for the first time. Technical aspects are given considerable emphasis, particularly in relation cholesterol reporter molecules and to the isolation and study of membrane cholesterol- and sphingomyelin-rich raft domains. Cell biological, biochemical and clinical topics are included in this book, which serve to emphasize the acknowledged and important benefits to be gained from the study of cholesterol and cholesterol-binding proteins within the biomedical sciences and the involvement of cholesterol in several clinical disorders. It is hoped that by presenting this topic in this integrated manner that an appreciation of the fact that there is much more that needs to be taken into account, studied and understood than the widely discussed bad and good cholesterol associated, respectively, with the low- and high-density lipoproteins, LDL and HDL.

Multicultural Organizations in Asia Heidi Dahles,Loh Wei Leng,2014-02-04 A new study of how Asian Pacific organizations and private enterprises are expanding into markets beyond their national bases by transforming themselves in multinational and transnational directions. It shows how multicultural relations are fundamental to such shifts. It explains the organizational processes that

characterize economic restructuring and the transgression of state borders by organizations seeking economic opportunities. It shows how these ambitions require boundaries to be overcome both inside and outside of organizations. This study also details the trend towards fluidity and complexity of boundaries – both physical and symbolic – within and without of organizations due to the speeding up of key processes. This, however, does not imply that boundaries are disappearing. Organizational change always challenges identities and sets new targets for this very identification. Mergers, acquisitions and strategic alliances all generate new organizational forms and necessitate the redefinition and renegotiation of organizational boundaries. The manifold ways in which organizational boundaries are affected by economic restructuring and at the same time affect social processes within and between organizations, in particular in the context of the booming economies of the Asia Pacific area is the focus of this volume. This book was previously published as a special issue of the Asian Pacific Business Review.

Nutrition for Healthy Hair Ralph M. Trüeb, 2020-11-22 The quantity and quality of the hair are closely related to the nutritional state of an individual. And yet, there is hardly another field with so much prejudice, misconception, and debate as diet and health, let alone hair health. Pharmacy aisles and Internet drugstores are full of nutritional supplements promising full, thick, luscious hair for prices that range from suspiciously cheap to dishearteningly exorbitant. Since there lies an important commercial interest in the nutritional value of various nutritional supplements, a central question that arises is whether increasing the content of an already adequate diet with nutrients may further promote hair growth and quality. This book aims at distinguishing facts from fiction, and at providing a sound scientific basis for nutrition-based strategies for healthy hair, at the same time acknowledging the problems and limitations of our current understanding and practice.

Advanced Piezoelectric Materials Kenji Uchino, 2010-09-27 Piezoelectric materials produce electric charges on their surfaces as a consequence of applying mechanical stress. They are used in the fabrication of a growing range of devices such as transducers (used, for example, in ultrasound scanning), actuators (deployed in such areas as vibration suppression in optical and microelectronic engineering), pressure sensor devices (such as gyroscopes) and increasingly as a way of producing energy. Their versatility has led to a wealth of research to broaden the range of piezoelectric materials and their potential uses. *Advanced piezoelectric materials: science and technology* provides a comprehensive review of these new materials, their properties, methods of manufacture and applications. After an introductory overview of the development of piezoelectric materials, Part one reviews the various types of piezoelectric material, ranging from lead zirconate titanate (PZT) piezo-ceramics, relaxor ferroelectric ceramics, lead-free piezo-ceramics, quartz-based piezoelectric materials, the use of lithium niobate and lithium in piezoelectrics, single crystal piezoelectric materials, electroactive polymers (EAP) and piezoelectric composite materials. Part two discusses how to design and fabricate piezo-materials with chapters on piezo-ceramics, single crystal preparation techniques, thin film technologies, aerosol techniques and manufacturing technologies for piezoelectric transducers. The final part of the book looks at applications such as high-power piezoelectric materials and actuators as well as the performance of piezoelectric materials under stress. With its distinguished editor and international team of expert contributors *Advanced piezoelectric materials: science and technology* is a standard reference for all those researching piezoelectric materials and using them to develop new devices in such areas as microelectronics, optical, sound, structural and biomedical engineering. Provides a comprehensive review of the new materials, their properties and methods of manufacture and application Explores the development of piezoelectric materials from the historical background to the present status Features an overview of

manufacturing methods for piezoelectric ceramic materials including design considerations

Organic Chemicals in the Environment Alasdair H. Neilson, Ann-Sofie Allard, 2012-09-05 Addressing the persistent environmental threat of organic chemicals with a fresh approach to degradation and transformation processes, *Organic Chemicals in the Environment: Mechanisms of Degradation and Transformation*, Second Edition examines a wide range of compounds as well as abiotic and microbiological reactions mediated by microorganisms. The book emphasizes the pathways used and the broad classes of enzymes involved. It provides an overview of experimental procedures with detailed coverage of the organic compounds that are considered to be xenobiotics. The book begins by providing a broad perspective on abiotic and biotic reactions, including the significance of a range of environmental determinants. The following chapters briefly introduce experimental procedures and emphasize those procedures for establishing the structure of metabolites using isotopes and physical methods. Next, the authors outline details of biochemical reactions involved in the biodegradation of the major groups of aliphatic, carbocyclic aromatic, and heterocyclic compounds. They end with coverage of bioremediation that has attracted increasing concern because of the hazard presented by the disposal of unwanted chemicals or by-products from their manufacture. Broad and comprehensive, this book provides a cohesive treatment of the subject. It contains an extensive set of literature references and numerous illustrative figures. The authors use a mechanistic approach with emphasis on the pathways, and the principles that emerge provide a guide not only for specific compounds but also for those having a more remote structural resemblance.
