Learning Spaces Diana Oblinger,2006 El espacio, ya sea físico o virtual, puede tener un impacto significativo en el aprendizaje. Learning Spaces se centra en la forma en que las expectativas de los alumnos influyen en dichos espacios, en los principios y actividades que facilitan el aprendizaje y en el papel de la tecnología desde la perspectiva de quienes crean los entornos de aprendizaje: profesores, tecnólogos del aprendizaje, bibliotecarios y administradores. La tecnología de la información ha aportado capacidades únicas a los espacios de aprendizaje, ya sea estimulando una mayor interacción mediante el uso de herramientas de colaboración, videoconferencias con expertos internacionales o abriendo mundos virtuales para la exploración. Este libro representa una exploración continua a medida que unimos el espacio, la tecnología y la pedagogía para asegurar el éxito de los estudiantes.

Cell Migration Claire M. Wells,Maddy Parsons,2017-05-04 Cell migration is a key component of many biological processes including embryonic development, immune responses, wound healing, organ regeneration, and cancer cell metastasis, thus making it an exciting and crucial field of study. The aim of Cell Migration: Developmental Methods and Protocols, Second Edition is to bring together a wide range of these techniques from the more basic migration assays, which are still the foundation of many cell migration studies, to state-of-the-art techniques and recent technical advances. Divided into three convenient parts, the volume begins with a number of basic in vitro migration assays including measurements of wound healing, cell scattering, invasion, and chemotaxis, as well as more complex measurements of transendothelial migration, the use of microfluidic chambers, and imaging cell migration in 3D. It continues with procedures for the imaging and measurement of cell migration in vivo including protocols for the use of chick, drosophila, and zebrafish embryos, and methods to measure metastatic spread and angiogenesis in mice, then concludes with a vital section on emerging techniques in the cell migration field including the use of TIRF, FRAP, and FRET microscopy. Written in the highly successful Methods in Molecular BiologyTM series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and notes from the experts on troubleshooting and avoiding known pitfalls. Comprehensive and up-to-date, Cell Migration: Developmental Methods and Protocols, Second Edition provides a comprehensive catalogue of techniques for the study of cell migration that can be used as a useful reference source for any researcher who wishes to explore this significant area of cell biology.

Historical Eclipses and Earth's Rotation F. Richard Stephenson,2008-03-24 The culmination of many years of research, this book discusses ancient and medieval eclipse observations and their importance in studying Earth's past rotation. This is the first major book on this subject in twenty years. The author has specialized for many years in the interpretation of early astronomical records and their application to problems in modern astronomy. The book contains an in-depth discussion of numerous eclipse records from Babylon, China, Europe and the Arab lands. The author provides translations of almost every record studied. He shows that although tides play a dominant long-term role in producing variations in Earth's rate of rotation--causing a gradual increase in the length of the day--there are significant and variable nontidal changes in opposition to the main trend. This book is intended for geophysicists, astronomers (especially those with an interest in history), historians and orientalists.

Clueless in Academe Gerald Graff,2008-10-01 Gerald Graff argues that our schools and colleges make the intellectual life seem more opaque, narrowly specialized, and beyond normal learning capacities than it is or needs to be. Left clueless in the academic world, many students view the life of the mind as a secret society for which only an elite few qualify. In a refreshing departure from standard diatribes against academia, Graff shows how academic unintelligibility is unwittingly reinforced not only by academic jargon and obscure writing, but by the disconnection of the curriculum and the failure to exploit

the many connections between academia and popular culture. Finally, Graff offers a wealth of practical suggestions for making the culture of ideas and arguments more accessible to students, showing how students can enter the public debates that permeate their lives.

The Things of the World James A. Aho,1998-10-30 What does it mean to be a social being in the ordinary life-world? This clear and compelling introduction to social phenomenology examines the experiential features of the basic things comprising our life-world, namely me, you, abstract others (enemies, communities, and associations), and attributes of the lived-body (emotions, pain, and pleasure). Each of these entities is phenomenologically described, with the aim of reducing reports of personal experiences and other primary documents to the presumed prototypical experience of the thing in question—its ideal essence. Another aim of this study is to sociologically account for how the various entities of the life-world have been accomplished, that is, how the prototypical experiences of the things in question have come to be. By showing the life-world to be our joint project rather than a fixed, unalterable coherency, this volume destabilizes our naive attitude towards the things of the world. Examples are drawn from the author's own research on issues such as violence, religion, health, and race; from classic and contemporary anthropological research; and from the works of some of the most innovative philosophers of the twentieth century. This study actually does phenomenology instead of merely arguing for its necessity and will appeal to both social scientists and philosophers.
