### **Fishery Products** Hartmut Rehbein, Jorg

Oehlschlager, 2009-11-16 Food quality and safety issues continue to dominate the press, with most food companies spending large amounts of money to ensure that the food quality and assessment procedures in place are adequate and produce good and safe food. This holds true for companies and laboratories responsible for the processing of fish into various products, those responsible for researching safe new products, and departments within other companies supporting these functions. Fishery Products brings together details of all the major methodologies used to assess the quality of fishery products in the widest sense. Subject coverage of this important book includes chapters on assessment of authenticity, and several chapters on quality assessment using various methods, such as: Texture measurement Electronic nose and tongue NMR Colour measurement This timely volume will serve as a vital tool for all those working in the processing of fishery and aquaculture products: including laboratory personnel working in regulatory bodies, food

quality control personnel, food scientists, food technologists, nutritionists, seafood trade bodies, seafood labelling regulatory bodies, government food protection agencies and environmental health personnel. Libraries in research establishments and universities where food science, food technology, nutrition, aquaculture, fisheries and biological sciences are studied and taught should have copies of this important publication on their shelves.

**Prostate Cancer Methods and Protocols** Pamela J. Russell, Paul Jackson, Elizabeth A.

Kingsley, 2008-02-01 Prostate cancer is the second leading cancer in men in Western society. A major concern, and an area of intensive research, involves understanding why certain prostate cancers remain localized or indolent, whereas others become aggressive and metastasize. The differences between these cancer types have profound implications for patients and physicians. Indolent disease, which grows very slowly,

generally does not cause any problems to the patient, whereas aggressive disease requires immediate treatment, the earlier the better. At present, there are no markers that discriminate between these two entities, thus causing a dilemma for the management of patients who have recently been diagnosed. The aim of Prostate Cancer Methods and Protocols is to explore cutting-edge molecular methods that may have the potential to reveal markers of disease for use in more accurate diagnoses of prostate cancer and, consequently, to lead to new treatment strategies. This book provides a comprehensive collection of both in vitro and in vivo step-by-step protocols currently used by leaders in prostate cancer research, advice on approaches that can be used in the study of prostate cancer, as well as reviews covering areas less amenable to laboratory research, such as environmental factors in prostate cancer, to provide the reader with an overview of the prostate cancer research field as it currently stands.

**Membrane Proteomics** Matthew J. Peirce, Robin Wait, 2010-11-19 The membranes surrounding cells and organelles constitute their interface with the local environment. The functions of membrane proteins include cell/cell and cell/extracellular matrix recognition, the reception and transduction of extracellular signals, and the transport of proteins, solutes and water molecules. Abnormal membrane protein expression has profound biological effects and may, for example, underlie phenotypic and functional differences between normal and tumour cells. Moreover the accessibility, particularly of plasma proteins traversing the plasma membrane of cells, makes them of particular utility to the therapeutic intervention in disease. Indeed, it is estimated that of all currently licensed pharmaceuticals, approximately 70% target proteins resident in the plasma membrane. In theory, unbiased technologies such as proteomics have the power to define patterns of membrane protein expression characteristic of distinct states of cellular development, differentiation or disease, and thereby identify novel markers of, or targets for intervention in, disease. However, although about 25% of open reading frames in fully sequenced genomes are estimated to encode integral membrane proteins, global analysis of membrane protein expression has proved problematic. Membrane protein analysis poses unique challenges at the level of extraction, solubilization, and separation in particular, and to a lesser extent of identification and quantitation. These challenges have, however, fostered creativity, in-

vation, and technical advances, many of which are brought together in Membrane P- teomics.

*Microbial Factories* Vipin Chandra

Kalia, 2016-02-16 This book highlights the efforts made by distinguished scientific researchers world-wide to meet two key challenges: i) the limited reserves of polluting fossil fuels, and ii) the ever-increasing amounts of waste being generated. These case studies have brought to the foreground certain innovative biological solutions to real-life problems we now face on a global scale: environmental pollution and its role in deteriorating human health. The book also highlights major advances in microbial metabolisms, which can be used to produce bioenergy, biopolymers, bioactive molecules, enzymes, etc. Around the world, countries like China, Germany, France, Sweden and the US are now implementing major national programs for the production of biofuels. The book provides information on how to meet the chief technical challenges – identifying an industrially robust microbe and cheap raw material as feed. Of the various possibilities for generating bioenergy, the most attractive is the microbial production of biohydrogen, which has recently gained significant recognition worldwide, due to its high efficiency and eco-friendly nature. Further, the book highlights factors that can make these bioprocesses more economical, especially the cost of the feed. The anaerobic digestion (AD) process

is more advantageous in comparison to aerobic processes for stabilizing biowastes and producing biofuels (hydrogen, biodiesel, 1,3-propanediol, methane, electricity), biopolymers (polyhydroxyalkanoates, cellulose, exopolysaccharides) and bioactive molecules (such as enzymes, volatile fatty acids, sugars, toxins, etc.) for biotechnological and medical applications. Information is provided on how the advent of molecular biological techniques can provide greater insights into novel microbial lineages. Bioinformatic tools and metagenomic techniques have extended the limits to which these biological processes can be exploited to improve human welfare. A new dimension to these scientific works has been added by the emergence of synthetic biology. The Big Question is: How can these Microbial Factories be improved through metabolic engineering and what cost targets need to be met?

**Damage Control Resuscitation** Philip C.

Spinella, 2019-08-12 This book provides a comprehensive overview of damage control resuscitation (DCR), an evidence-based approach to the resuscitation of patients with severe life-threatening hemorrhage (LTH). It focuses on both civilian and military applications as DCR is utilized in civilian trauma situations as well as combat casualty care settings. The book covers the history of fluid resuscitation for bleeding, epidemiology of severe traumatic injuries, prediction of life-threatening hemorrhage, pathophysiology and diagnosis of blood failure, and permissive hypotension. Chapters provide in-depth detail on hemostatic resuscitation

principles, dried plasma, dried platelet surrogates, and recent developments in frozen red blood cells and oxygen carriers. The book also discusses how DCR principles can be used in a variety of situations such as when there are large numbers of patients with hemorrhagic lesions, non-trauma scenarios, and on distinct populations such as children. Finally, it concludes with a discussion of training and education methods for the implementation of DCR and remote DCR principles as well as learning healthcare system principles to facilitate the implementation of DCR and ultimately improve outcomes for patients with life-threatening hemorrhage. *Damage Control Resuscitation: Identification and Treatment of Life-Threatening Hemorrhage* is an essential resource for physicians and related professionals, residents, nurses and medical students in emergency medicine, anesthesia, surgery, and critical care, as well as civilian and military EMS providers.

**Sustainable Biotechnology- Enzymatic Resources of Renewable Energy** Om V. Singh, Anuj K. Chandel, 2019-01-25 Nature offers abundant renewable resources that can be used to partially replace fossil fuels and commodity chemicals but issues of cost, technology readiness levels, and compatibility with existing distribution networks remain huge challenges. Cellulosic ethanol and biodiesel are the most immediately obvious target fuels, with hydrogen, methane and butanol as other potentially viable products. This book continues to bridge the technology gap and focus on critical aspects of lignocellulosic biomolecules and the respective mechanisms regulating their bioconversion to liquid fuels into energy and value-added products of industrial significance. This book is a collection of reviews elucidating several broad-ranging areas of progress and challenges in the utilization of sustainable resources of renewable energy, especially in biofuels. This book comes just at a time when government and industries are accelerating their

efforts in the exploration of alternative energy resources, with expectations of the establishment of long-term sustainable alternatives to petroleum-based liquid fuels. Apart from liquid fuel this book also emphasizes the use of sustainable resources for value-added products, which may help in revitalizing the biotechnology industry at a broader scale. This book also provides a comprehensive review of basic literature and advance research methodologies to graduate students studying environmental microbiology, chemical engineering, bio-economy and microbial biotechnology.

*China's State-owned Enterprises* Hong Sheng, Nong Zhao, 2013 The Nature, the Performance, and the Reform of State-owned Enterprises provides a detailed description of state-owned enterprises (SOEs) in China with respect to both efficiency and income distribution. It shows that state ownership in the form of SOEs does not use resources efficiently and has a poor record in income distribution. Moreover, SOEs are found to enjoy unfair advantages in their competition with other firms. To illustrate the point, the book presents data revealing how favored policies, monopolistic powers, and subsidies benefit SOEs. These advantages are worth several trillion yuans a year. It is a sad irony that such wealth of the people is used to beef up the revenues of the SOEs, making their accounts look much better than they should be. This book, with its rich empirical data and information, is an authoritative reference for researchers interested in SOEs. It is also a good read for students of social

sciences and the public to learn more about SOEs.

**I Know What I Saw** Linda S Godfrey, 2019-07-16  
Which came first--the monster or the myth?  
Journalist Linda Godfrey investigates present-day encounters with mysterious creatures of old. The monsters of ancient mythology, folklore, and more contemporary urban legend have long captured the popular imagination. While most people in America today relegate monsters to just that--our imaginations--we continue to be fascinated by the unknown. Linda Godfrey is one of the country's leading authorities on modern-day monsters and has interviewed countless eyewitnesses to strange phenomena. Monsters evolve, taking on both new and familiar forms over time and across cultures. In this well-researched book, Godfrey explores uncanny encounters with werewolves, goatmen, Bigfoot, and more. In more than twenty-five years spent chasing monsters, Godfrey has found that it often remains unclear whether the sightings are simply mistaken animals, hoaxes, or coincidence. When all the speculation is said and done, one question remains for fans and researchers: Are the creatures real, or are they entirely other-world? Godfrey suspects that it isn't an either/or question--our reality operates on a scale from dense matter to realms the human eye cannot see. As Godfrey investigates unexplained phenomena, her search for answers will fascinate casual observers and enthusiasts alike.

*Life Cycle Assessment of Renewable Energy*

*Sources* Anoop Singh, Deepak Pant, Stig Irving Olsen, 2013-09-02 Governments are setting challenging targets to increase the production of energy and transport fuel from sustainable sources. The emphasis is increasingly on renewable sources including wind, solar, geothermal, biomass based biofuel, photovoltaics or energy recovery from waste. What are the environmental consequences of adopting these other sources? How do these various sources compare to each other? Life Cycle Assessment of Renewable Energy Sources tries to answer these questions based on the universally adopted method of Life Cycle Assessment (LCA). This book introduces the concept and importance of LCA in the framework of renewable energy sources and discusses the key issues in conducting their LCA. This is followed by an in-depth discussion of LCA for some of the most common bioenergy sources such as agricultural production systems for biogas and bioethanol, biogas from grass, biodiesel from palm oil, biodiesel from used cooking oil and animal fat, Jatropha biodiesel, lignocellulosic bioethanol, ethanol from cassava and sugarcane molasses, residential photovoltaic systems, wind energy, microalgal biodiesel, biohydrogen and biomethane. Through real examples, the versatility of LCA is well emphasized. Written by experts all over the globe, the book is a cornucopia of information on LCA of bioenergy systems and provides a platform for stimulation of new ideas and thoughts. The book is targeted at practitioners of LCA and will become a useful tool for researchers working on different aspects of bioenergy.
