Fluorescence Spectroscopy, Imaging and Probes Ruud Kraayenhof,Antonie J.W.G. Visser,Hans C. Gerritsen,2012-12-06 The increased use of fluorescence techniques is greatly enhanced by the improved instrumentation pioneered by inventive scientists and now made available commercially by several high-tech companies. Moreover, the design and development of many new molecular probes with higher selectivity for specific microenvironmental properties has stimulated many new researchers to employ fluorescence techniques for solving their problems. This topic book, the second in his series, reflects this exciting scientific progress and deals, among others, with new approaches and new probes in fluorescence spectroscopy, single molecule fluorescence, applications in biomembrane and enzyme studies and imaging of living cells.

Advanced Time-Correlated Single Photon Counting Techniques Wolfgang Becker,2005-12-19 In 1984 Desmond O'Connor and David Phillips published their comprehensive book „Time-correlated Single Photon Counting“. At that time time-correlated single photon counting, or TCSPC, was used

primarily to record fluorescence decay functions of dye solutions in cuvettes. From the beginning, TCSPC was an amazingly sensitive and accurate technique with excellent time-resolution. However, acquisition times were relatively slow due to the low repetition rate of the light sources and the limited speed of the electronics of the 70s and early 80s. Moreover, TCSPC was intrinsically one-dimensional, i.e. limited to the recording of the waveform of a periodic light signal. Even with these limitations, it was a wonderful technique. More than 20 years have elapsed, and electronics and laser techniques have made impressive progress. The number of transistors on a single chip has approximately doubled every 18 months, resulting in a more than 1,000-fold increase in complexity and speed. The repetition rate and power of pulsed light sources have increased by about the same factor.

Gladiators Roger Dunkle, 2013-09-13 The games comprised gladiatorial fights, staged animal hunts (venationes) and the executions of convicted criminals and prisoners of war. Besides entertaining the crowd, the games delivered a powerful message of Roman power: as a reminder of the wars in which Rome had acquired its empire, the distant regions of its far-flung empire (from where they had obtained wild beasts for the venatio), and the inevitability of Roman justice for criminals and those foreigners who had dared to challenge the empire's authority. Though we might see these games as bloodthirsty, cruel and reprehensible condemning any alien culture out of hand for a sport that offends our sensibilities smacks of cultural chauvinism. Instead one should judge an ancient sport by the standards of its contemporary cultural context. This book offers a fascinating, and fair historical appraisal of gladiatorial combat, which will bring the games alive to the reader and help them see them through the eyes of the ancient Romans. It will answer questions about gladiatorial combat such as: What were its origins? Why did it disappear? Who were gladiators? How did they become gladiators? What was their training like? How did the Romans view gladiators? How were gladiator shows produced and advertised? What were the different styles of gladiatorial fighting? Did gladiator matches have referees? Did every match end in the death of at least one gladiator? Were gladiator games mere entertainment or did they play a larger role in Roman society? What was their political significance?

Time-correlated single photon counting Desmond O'Connor, 2012-12-02 Time-correlated Single Photon Counting has been written in the hope that

by relating the authors' experiences with a variety of different single photon counting systems, they may provide a useful service to users and potential users of this formidably sensitive technique. Of all the techniques available to obtain information on the rates of depopulation of excited electronic singlet states of molecular species, monitoring of fluorescence provides, in principle, the simplest and most direct measure of concentration. This volume comprises eight chapters, with the first focusing on the time dependence and applications of fluorescence. Succeeding chapters go on to discuss basic principles of the single photon counting lifetime measurement; light sources; photomultipliers; electronics; data analysis; nanosecond time-resolved emission spectroscopy; time dependence of fluorescence anisotropy. This book will be of interest to practitioners in the field of chemistry.
