Get Goodness Mike Hickey, 2011-06-16 This book looks at virtue as the power to do good from the theological, philosophical, and poetic perspective. None of us should be seeking virtuous perfection in orienting ourselves to the good in this life; we should only be seeking change. The journey is the goal.

Under Arrest Bob Tarantino, 2007-08-30 Did you know that Canada's Criminal Code still has provisions outlawing the practice of witchcraft and crafty sciences? Did you know that blasphemy is a crime in Canada? And did you know that putting a picture of a red poppy on your website could get you in trouble with the Royal Canadian Legion? Lawyer and author Bob Tarantino takes readers on an entertaining and informative romp through Canada's legal labyrinths in a book that spotlights the country's past and present strange-but-true laws and legal history. He examines odd statutes and arcane jurisprudence across the spectrum of Canadian endeavours, from war and religion to sex and culture to politics and business. Frequently, he demonstrates the parallels between yesterday's prohibitions and today's trends such as the edict against duelling and the legalities of twenty-first-century hockey slugfests, or the confiscation of so-called crime comics in the 1950s and the controversy surrounding violence in contemporary video games.

Testicular Cancer Kathleen Verville, 2009 Testicular Cancer explores the various forms of the disease, discusses its detection, diagnosis, and treatment, and gives an overview of current clinical and laboratory research. This relatively rare form of cancer is seen most often in young men in their late teens, 20s, and 30s. The disease, which once killed most patients, now has a survival rate greater than 90 percent, making it one of the success stories in the history of cancer treatment. Important historical research breakthroughs in the fight against testicular cancer are highlighted, as well as important questions and challenges facing scientists in the future.

Romantik Dönem Viyola Sonatlarına Müzikal ve Teknik Bakış Füsün Naz Altınal , 2023-05-04 Bu kitap romantik viyola sonatlarının yorumlanmasında orta ve ileri düzey icracılar için eşsiz bir kaynak oluşturması amacı ile yazılmıştır. 19.yy'da virtüözite kavramının da ortaya çıkması ile doruk noktasına ulaşmış olan keman repertuarının gelişiminin ardından besteciler yeni arayışlara girmiş, o güne kadar göz ardı etmiş oldukları viyola için de eserler yazmaya başlamışlardır. 19.yy boyunca orijinali viyola için yazılmış veya diğer enstrümanlardan transkripsiyonları yapılmış olan sonatlardan günümüz viyola repertuarında oldukça popüler olan ve sıklıkla seslendirilen, temel yaylı çalgı teknikleri ve yorumculuk açısından da önemli yedi sonat seçilerek bu kitapta incelenmiş, yorumcular için faydalı olabilecek öneriler sunulmuştur. Bu sonatlar, Felix Bartholdy Mendelssohn "Sonata for Viola and Piano in C minör", Henri Vieuxtemps "Sonata for Viola Op. 36", Franz Schubert "Sonata for Arpeggione", Mikhail Glinka "Sonata for Viola and Piano", Anton Rubinstein "Sonata for Viola and Piano", Johannes Brahms "Sonata for Viola and Piano Op.120 No.1" ve "Op.120 No.2" olarak belirlenmiştir. Keman ve viyolanın teknik benzerliğinden yola çıkarak, 19. yy'ın en önemli virtüözleri ve pedagogları olarak bilinen Ivan Galamian, Yehudi Menuhin ve William Primrose'un keman ve viyola tekniğine getirdikleri yenilikler üzerinde durulmuştur. Romantik viyola müziğini derinden keşfetmek ve yorumculuğun uçsuz bucaksız diyarlarında yolculuğa çıkmak isteyenlerin yolunun bu kitaptan geçmesi dileğiyle.

Realising REDD+ Arild Angelsen, 2009-01-01 REDD+ must be transformational. REDD+ requires broad institutional and governance reforms, such as tenure, decentralisation, and corruption control. These reforms will enable departures from business as usual, and involve communities and forest users in making and implementing policies that affect them. Policies must go beyond forestry. REDD+ strategies must include policies outside the forestry sector narrowly defined, such as agriculture and energy, and better coordinate across sectors to deal with non-forest drivers of deforestation and degradation. Performance-based payments are key, yet limited. Payments based on performance directly incentivise and compensate forest owners and users. But schemes such as payments for environmental services (PES) depend on conditions, such as secure tenure, solid carbon data and transparent governance, that are often lacking and take time to change. This constraint reinforces the need for broad institutional and policy reforms. We must learn from the past. Many approaches to REDD+ now being considered are similar to previous efforts to conserve and better manage forests, often with limited success. Taking on board lessons learned from past experience will improve the prospects of REDD+ effectiveness. National circumstances and uncertainty must be factored in. Different country contexts will create a variety of REDD+ models with different institutional and policy mixes. Uncertainties about the shape of the future global REDD+ system, national readiness and political consensus require flexibility and a phased approach to REDD+ implementation.

Programming Collective Intelligence Toby Segaran, 2007-08-16 Want to tap the power behind search rankings, product recommendations, social bookmarking, and online matchmaking? This fascinating book demonstrates how you can build Web 2.0 applications to mine the enormous amount of data created by people on the Internet. With the sophisticated algorithms in this book, you can write smart programs to access interesting datasets from other web sites, collect data from users of your own applications, and analyze and understand the data once you've found it. *Programming Collective Intelligence* takes you into the world of machine learning and statistics, and explains how to draw conclusions about user experience, marketing, personal tastes, and human behavior in general -- all from information that you and others collect every day. Each algorithm is described clearly and concisely with code that can immediately be used on your web site, blog, Wiki, or specialized application. This book explains: Collaborative filtering techniques that enable online retailers to recommend products or media Methods of clustering to detect groups of similar items in a large dataset Search engine features -- crawlers, indexers, query engines, and the PageRank algorithm Optimization algorithms that search millions of possible solutions to a problem and choose the best one Bayesian filtering, used in spam filters for classifying documents based on word types and other features Using decision trees not only to make predictions, but to model the way decisions are made Predicting numerical values rather than classifications to build price models Support vector machines to match people in online dating sites Non-negative matrix factorization to find the independent features in a dataset Evolving intelligence for problem solving -- how a computer develops its skill by improving its own code the more it plays a game Each chapter includes exercises for extending the algorithms to make them more powerful. Go beyond simple database-backed applications and put the wealth of Internet data to

work for you. Bravo! I cannot think of a better way for a developer to first learn these algorithms and methods, nor can I think of a better way for me (an old AI dog) to reinvigorate my knowledge of the details. -- Dan Russell, Google Toby's book does a great job of breaking down the complex subject matter of machine-learning algorithms into practical, easy-to-understand examples that can be directly applied to analysis of social interaction across the Web today. If I had this book two years ago, it would have saved precious time going down some fruitless paths. -- Tim Wolters, CTO, Collective Intellect

Night Hunters William Pace Head, 2014-03-18 In *Night Hunters*, air power historian William P. Head provides the first detailed study of the development and deployment of the AC-130 gunship. While other airframes and other types of close air support (CAS) and interdiction weapon systems preceded or flew with the AC-130s, this four-engine cargo airframe proved to be not only the longest serving fixed-wing gunship but also the most effective by far. During the Vietnam War, the US military developed new tactics and weapons systems to counter a diversity of enemy tactics and geographic features, the difficult climate, and the shifting diplomatic context. One of the most important was the development of the AC-130. Its ability to transport heavier payloads at higher altitudes across longer distances made it the logical choice to be the final Vietnam-era fixed-wing gunship and the only one that continues to fly missions in the twenty-first century. In addition, it employed many of the most advanced weapons, sensors, targeting devices, and fire control systems of the 1970s or of any era. By recounting both the technical development and the combat operations of the plane, and by looking at the proposed alternatives for its use in the War on Terror, *Night Hunters* offers a clear view of the role of gunships and of close air support in US wars. In today's never-ending brushfire wars, the AC-130s continue to uphold their reputation for excellence.

Fighting Terrorism in the Liberal State Samuel Peleg, Wilhelm F. Kempf, 2006 Contains papers that illustrate the balanced dichotomy between terrorism and counter-terrorism against the background of the liberal state.
