The Patent-Competition Interface in Developing Countries Thomas K. Cheng, 2022-01-15 This book proposes an approach to the patent-competition interface for developing countries. It puts forward a theoretical framework after canvassing relevant policy considerations and examines the many reasons why patent protection is not essential for generating innovation incentives in developing countries. These include the tendency of the patent system to overcompensate innovators, the availability of other appropriation mechanisms for innovators to monetize their innovations, and the lack of appropriate technological capacity in many developing countries to take advantage of the incentives generated by the patent system. It also argues that developing countries with a small population need not pay heed to the impact of their patent system on the incentives of foreign innovators. It then proposes a classification of developing countries into production countries, technology adaptation countries, and proto-innovation countries and argues that dynamic efficiency considerations take on different meanings for developing countries depending on their technological capacities. For the vast majority of developing countries bereft of meaningful innovation capacity, foreign technology transfer is the main vehicle for technological progress. The chief dynamic policy consideration for these countries is hence incentives for technology transfer importation incentives. There are three main means of voluntary technology transfer: importation of technological goods, foreign direct investment, and technology licensing. Competition law regulation of patent exploitation practices interacts with these three means of technology transfer in different ways and an appropriate approach to the patent-competition interface for developing countries. The approach is then applied to a number of patent exploitation practices, including unilateral refusal to deal, patent tying, excessive pricing for pharmaceuticals, reverse payment settlements, and restr

Think Bayes Allen B. Downey, 2021-05-18 If you know how to program, you're ready to tackle Bayesian statistics. With this book, you'll learn how to solve statistical problems with Python code instead of mathematical formulas, using discrete probability distributions rather than continuous mathematics. Once you get the math out of the way, the Bayesian fundamentals will become clearer and you'll begin to apply these techniques to real-world problems. Bayesian statistical methods are becoming more common and more important, but there aren't many resources available to help beginners. Based on undergraduate classes taught by author Allen B. Downey, this book's computational approach helps you get a solid start. Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation, prediction, decision analysis, evidence, and Bayesian hypothesis testing Get started with simple examples, using coins, dice, and a bowl of cookies Learn computational methods for solving real-world problems

The Authentic Swing Steven Pressfield,2013-09-24 The Story Behind THE LEGEND OF BAGGER VANCE If you've read his books THE WAR OF ART and TURNING PRO, you know that for thirty years Steven Pressfield (GATES OF FIRE, THE AFGHAN CAMPAIGN etc.) wrote spec novel after spec novel before any publisher took him seriously. How did he finally break through? Ignoring just about every rule of commercial book publishing, Pressfield's first novel not only became a major bestseller (over 250,000 copies sold), it was adapted into a feature film directed by Robert Redford and starring Matt Damon, Will Smith, and Charlize Theron. Where did he get the idea? What magical something did THE LEGEND OF BAGGER VANCE have that his previous manuscripts lacked? Why did Pressfield decide to write a novel when he already had a well established screenwriting career? How does writing a publishable novel really work? Taking a page from John Steinbeck's classic JOURNAL OF A NOVEL, Steven Pressfield offers answers for these and scores of other practical writing guestions in THE AUTHENTIC SWING.

Against Intellectual Monopoly Michele Boldrin, David K. Levine, 2010-01-25 Intellectual property - patents and copyrights - have become controversial. We witness teenagers being sued for pirating music - and we observe AIDS patients in Africa dying due to lack of ability to pay for drugs that are high priced to satisfy patent holders. Are patents and copyrights essential to thriving creation and innovation - do we need them so that we all may enjoy fine music and good health? Across time and space the resounding answer is: No. So-called intellectual property is in fact an intellectual monopoly that hinders rather than helps the competitive free market regime that has delivered wealth and innovation to our doorsteps. This book has broad coverage of both copyrights and patents and is designed for a general audience, focusing on simple examples. The authors conclude that the only sensible policy to follow is to eliminate the patents and copyright systems as they currently exist.

Federated Search Milad Shokouhi, Luo Si, 2011 Web search has significantly evolved in recent years. For many years, web search engines such as Google and Yahoo! were only providing search service over text documents. Aggregated search was one of the first steps to go beyond text search, and was the beginning of a new era for information seeking and retrieval. These days, web search engines support aggregated search

over a number of verticals, and blend different types of documents (e.g. images, videos) in their search results. Moreover, web search engines have started to crawl and search the hidden web. Federated search (federated information retrieval or distributed information retrieval) has played a key role in providing the technology for aggregated search and crawling the hidden web. The application of federated search is not limited to the web search engines. There are many scenarios such as digital libraries in which information is distributed across different sources/servers. Peer-to-peer networks and personalized search are two examples in which federated search has been successfully used for searching multiple independent collections. Federated Search provides a comprehensive summary of the research done to date, looks at some of the challenges still to be faced, and suggests some directions for future research on this important and current topic.

The Lladró Guide Peggy Rose Whiteneck, 2019-11-28 Since its founding in the early 1950s, the Spanish porcelain firm Lladró has attracted a large collector market. This book identifies all known Lladró figurine brand names, differentiates them from Spanish porcelain competitors, addresses some of the mysteries surrounding Lladró's production history, and makes the case for Lladró's right to a place among the most-esteemed names in the history of fine porcelain. In addition to analyzing known models, the book gives a tantalizing photographic glimpse of rare, prototypic, and one-of-a-kind models, including several not found in historical catalogs. Also included are pricing and value factors, the most-recent developments with the brand since its sale out of the family, and details on how to distinguish genuine pieces from Spain's several other companies working in the Lladró style. More than 300 photos provide detailed visual reference.
