New Trends in Disruptive Technologies, Tech Ethics and Artificial Intelligence Daniel H. de la Iglesia, Juan F. de Paz Santana, Alfonso J. López Rivero, 2022-08-27 This book provides a forum for experts to present their latest research in disruptive technologies, promoting knowledge transfer. Due to the important advances in technologies such as artificial intelligence, big data, the Internet of things, or bioinformatics produced in recent years, it is necessary to conduct a thorough review of current ethical patterns. One of the research fields that is in full expansion and with a broad future is technology ethics or tech ethics. Just a few years ago, this type of research was a small part, and they did not have too many technology researchers involved. At present, due to the explosion of new applications of artificial intelligence, their problems and their legal barriers have flourished innumerable initiatives, declarations, principles, guides, and analyses focused on measuring the social impact of these systems and on the development of a more ethical technology. It is, therefore, a problem that needs to be addressed from an academic and multidisciplinary point of view, where experts in ethics and behavior work together with experts in new and disruptive technologies. The

international conference “Disruptive Technologies Tech Ethics and Artificial Intelligence” (DITTET 2022) provides a forum to present and discuss the latest scientific and technical advances and their implications in the field of ethics. It provides a unique opportunity to bring together experts in different fields, academics, and professionals to exchange their experience in the development and deployment of disruptive technologies, artificial intelligence, and their ethical problems.

Promoting oil seed crops in Pakistan: Prospects and constraints Rana, Abdul Wajid, Gill, Sitara, Akram, Iqra, 2022-03-09 Oilseeds in Pakistan characterizes a policy failure as the production of oilseeds as well as edible oil has been on the decline despite various initiatives. The country has been augmenting growing demand-supply gap through imports since early 1970. The domestic production contributes only 13-15 percent of the total consumption while 85-87 percent is met through imports. Per capita consumption of vegetable oil has risen from 5.31 kg in 1973-74 to 20 kg in 2018 and is likely to move to 22 kg by 2028 projecting total consumption to 6.5 million tons by 2028 against current local production of less than 0.5 million tons, widening the demand-supply gap further. The import bill for these products has reached over US\$4 billion in FY2021 which is straining the balance of trade and the balance of payment. With global uncertainties and challenges facing the oilseeds sector including the sharp price fluctuations and market instability and favorable tariffs for imports, the import bill is likely to move upward underscoring the need for well thought out policy and planning.

Malicious Bots Ken Dunham, Jim Melnick, 2008-08-06 Originally designed as neutral entities, computerized bots are increasingly being used maliciously by online criminals in mass spamming events, fraud, extortion, identity theft, and software theft. *Malicious Bots: An Inside Look into the Cyber-Criminal Underground of the Internet* explores the rise of dangerous bots and exposes the nefarious methods of “botmasters”. This valuable resource assists information security managers in understanding the scope, sophistication, and criminal uses of bots. With sufficient technical detail to empower IT professionals, this volume provides in-depth coverage of the top bot attacks against financial and government networks over the last several years. The book presents exclusive details of the operation of the notorious Thr34t Krew, one of the most malicious bot herder groups in recent history. Largely unidentified by anti-virus companies, their bots spread globally for months, launching massive distributed denial of service (DDoS) attacks and warez (stolen software distributions). For the first time, this story is publicly revealed, showing how the bot herders got arrested, along with details on other bots in the world today. Unique descriptions of the criminal marketplace – how criminals make money off of your computer – are also a focus of this exclusive book! With unprecedented detail, the book goes on to explain step-by-step how a hacker launches a botnet attack, providing specifics that only those entrenched in the cyber-crime investigation world could possibly offer. Authors Ken Dunham and Jim Melnick serve on the front line of critical cyber-attacks and countermeasures as experts in the deployment of geopolitical and technical bots. Their work involves advising upper-level government officials and executives who control some of the largest networks in the world. By examining the methods of Internet predators, information security

managers will be better able to proactively protect their own networks from such attacks.

Analysis and Simulation of Electrical and Computer Systems Damian Mazur, Marek Gołębiowski, Mariusz Korkosz, 2017-10-20 This book addresses selected topics in electrical engineering, electronics and mechatronics that have posed serious challenges for both the scientific and engineering communities in recent years. The topics covered range from mathematical models of electrical and electronic components and systems, to simulation tools implemented for their analysis and further developments; and from multidisciplinary optimization, signal processing methods and numerical results, to control and diagnostic techniques. By bridging theory and practice in the modeling, design and optimization of electrical, electromechanical and electronic systems, and by adopting a multidisciplinary perspective, the book provides researchers and practitioners with timely and extensive information on the state of the art in the field — and a source of new, exciting ideas for further developments and collaborations. The book presents selected results of the XIII Scientific Conference on Selected Issues of Electrical Engineering and Electronics (WZEE 2016), held on May 04-08, 2016, in Rzeszów, Poland. The Conference was organized by the Rzeszów Division of Polish Association of Theoretical and Applied Electrical Engineering (PTETiS) in cooperation with the Faculty of Electrical and Computer Engineering of the Rzeszów University of Technology.

Sexually Transmitted Disease [2 volumes] Jill Ann Grimes MD, Lori Apffel Smith MD, Kristyn Fagerberg MD, 2013-11-12 This up-to-date, two-volume work provides A-Z coverage of all topics

related to sexually transmitted disease, ranging from anatomy to modern legal and social implications to past and present methods of prevention, diagnosis, and treatment. Sexually transmittable diseases are a sensitive and embarrassing subject. Many sexually transmitted diseases are silent, providing no symptoms until they cause serious medical problems. But with one in four Americans over the age of fourteen being infected with a sexually transmitted infection, the topic of sexually transmitted diseases (STDs) is a highly relevant health issue. This work contains over 230 entries that span the history and wide range of topics regarding STDs, from the birth of condoms over 3,000 years ago through discovery of the infectious agents and the invention of effective vaccines to the legal and societal implications of STDs. This two-volume encyclopedia investigates the spectrum of sexually transmitted diseases and related topics and issues, describing their microscopic origins, the chronology of research and medical treatment, the body parts affected, and the modern-day methods of diagnosis, treatment, and prevention of spread. Additionally, this work addresses legal implications of disease transmission, psychosocial impacts, as well as long-term medical consequences such as potential infertility, pelvic inflammatory disease, and chronic pelvic pain.
