Learn Electronics with Arduino Don Wilcher, 2012-11-27 Have you ever wondered how electronic gadgets are created? Do you have an idea for a new proof-of-concept tech device or electronic toy but have no way of testing the feasibility of the device? Have you accumulated a junk box of electronic parts and are now wondering what to build? Learn Electronics with Arduino will answer these questions to discovering cool and innovative applications for new tech products using modification, reuse, and experimentation techniques. You'll learn electronics concepts while building cool and practical devices and gadgets based on the Arduino, an inexpensive and easy-to-program microcontroller board that is changing the way people think about home-brew tech innovation. Learn Electronics with Arduino uses the discovery method. Instead of starting with terminology and abstract concepts, You'll start by building prototypes with solderless breadboards, basic components, and scavenged electronic parts. Have some old blinky toys and gadgets lying around? Put them to work! You'll discover that there is no mystery behind how to design and build your own circuits, practical devices, cool gadgets, and electronic toys. As you're on the road to becoming an electronics guru, you'll build practical devices like a servo motor controller, and a robotic arm. You'll also learn how to make fun gadgets like a sound effects generator, a music box, and an electronic singing bird.

The Predictive Retailer Andrew Pearson, 2017-10-23 The Predictive Retailer is a retail company that utilizes the latest technological developments to deliver an exceptional personalized experience to each and every customer. Today, technology such as AI, Machine Learning, Augmented Reality, IoT, Real-time stream processing, social media, and wearables are altering the Customer Experience (CX) landscape and retailers need to jump aboard this fast moving technology or run the risk of being left out in the cold. The Predictive Retailer reveals how these and other technologies can help shape the customer journey. The book details how the five types of analytics-descriptive, diagnostic, predictive, prescriptive, and edge analytics-affect not only the customer journey, but also just about every operating function of the retailer. An IoT connected retailer can make its operations smart. Connected devices can help with inventory optimization, supply chain management, labor management, waste management, as well as keep the retailer's data centers green and its energy use smart. Social media is no longer a vanity platform, but rather it is a place to both connect with current customers as well as court new ones. It is also a powerful branding channel that can be utilized to both understand a retailer's position in the market, as well as a place to benchmark its position against its competitors. Today, technology moves at break-neck speed and it can offer the potential of anticipatory capabilities, but it also comes with a confusing variety of technological terms--Big Data, Cognitive Computing, CX, Data Lakes, Hadoop, Kafka, Personalization, Spark, etc., etc. The Predictive Retailer will help make sense of it all, so that a retail executive can cut through the confusing technological jargon and understand why a Spark-based real-time stream processing data stream might be preferable to a TIBCO Streambase one, or an IBM Streaming Analytics one. This book will help retail executives break through the technological clutter so that they can deliver an unrivaled customer experience to each and every patron that comes through their doors.

Computer Graphics Through OpenGL® Sumanta Guha,2018-12-19 COMPREHENSIVE COVERAGE OF SHADERS AND THE PROGRAMMABLE PIPELINE From geometric primitives to animation to 3D modeling to lighting, shading and texturing, *Computer Graphics Through OpenGL®: From Theory to Experiments* is a comprehensive introduction to computer graphics which uses an active learning style to teach key concepts. Equally emphasizing theory and practice, the book provides an understanding not only of the principles of 3D computer graphics, but also the use of the OpenGL® Application Programming Interface (API) to code 3D scenes and animation, including games and movies. The undergraduate core of the book takes the student from zero knowledge of computer graphics to a mastery of the fundamental concepts with the ability to code applications using fourth-generation OpenGL®. The remaining chapters explore more advanced topics, including the structure of curves and surfaces, applications of projective spaces and transformations and the implementation of graphics pipelines. This book can be used for introductory undergraduate computer graphics courses over one to two semesters. The careful exposition style attempting to explain each concept in the simplest terms possible should appeal to the self-study student as well. Moon-face and Other Stories Jack London,1906 JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. The son of the Wolf (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, *The Call of the Wild* (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including *The Sea-Wolf* (1904), *White Fang* (1906), *South Sea Tales* (1911), and *Jerry of the South Seas* (1917). One of

London's most interesting novels is the semi-autobiographical *Martin Eden* (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

On the Turn Bárbara Arizti, Silvia Martínez-Falquina, 2007 *On the Turn: The Ethics of Fiction in Contemporary Narrative in English* is an attempt to listen to the various voices that participate in the current dialogue on the relationship between fiction and ethics. The editors's (TM) introduction investigates the current state of affairs on the return to ethics in critical and literary consideration, and it opens up the way for the variety of approaches that follows. Participants include internationally recognized scholars like Andrew Gibson, Patricia Waugh, or Native American fiction writer and poet Gordon Henry, winner of the American Book Award in 1995. All in all, contributors cover a significant geographical diversity, and their approaches also vary from general theory to particular examples, from traditional interpretations to post-deconstruction ethics. Authors analyze texts both mainstream and marginal, colonial and postcolonial; they examine the ethics of race, gender and sexuality; the ethics of self-positioning and orientation; the ethics of style; the ethics of reception; the ethics of mode and genre; the ethics of extreme situations of evil, disease and fascism. In its search for a better understanding of the global/nationalistic world of today, *On the Turn* therefore moves beyond the scope of literary criticism into issues of wider, more urgent relevance. What should I, ought I, may I, must I, do, if anything, on the basis of reading, when I have read a literary work? What does reading a literary work authorize, or even command, me to do? Writing an essay about the work would be one response. *On the Turn* is a wonderfully diverse, learned, challenging, provocative, even sometimes controversial, collection of essays on the ethical dimensions of literature. This book is testimony to the continued lively interest in the ethical turn in literary studies. The authors are, for the most part, concerned with ethical theory and with ethically charged situations in postmodern novels in English, as they shape readers's (TM) values and judgments. Poetry and non-print media are, however, also discussed. J. Hillis Miller UCI Distinguished Research Professor of Comparative Literature and English, University of California at Irvine *The Ethics of Fiction* is an important and exciting volume that explores with energy and rigour the connections between ethics and literature. Relating literature to philosophy, neurobiology, politics, religion, deconstruction and psychoanalysis, the twenty two contributors richly advance â~the ethical turnâ (TM) recently embraced by many critics. Works by authors such as Ian McEwan, A.S. Byatt, Charles Palliser, Hanif Kureishi, J.M. Coetzee, David Malouf, George Orwell, E.L. Doctorow, Flannery Oâ (TM) Connor, Toni Morrison and Paul Auster are presented in a new light and complex topics such as territoriality, the nature of love, Islamophobia and the politics of representation are tackled with imagination and intellectual integrity. This book is essential reading for anyone interested in the dialogue between ethics and literature. Avril Horner, Professor of English, Kingston University
