📖 **INTERNET OF THINGS FROM HYPE TO REALITY** Ammar Rayes, Samer Salam, 2016-10-22 This book comprehensively describes an end-to-end Internet of Things (IoT) architecture that is comprised of devices, network, compute, storage, platform, applications along with management and security components. It is organized into five main parts, comprising of a total of 11 chapters. Part I presents a generic IoT reference model to establish a common vocabulary for IoT solutions. This includes a detailed description of the Internet protocol layers and the things (sensors and actuators) as well as the key business drivers to realize the IoT vision. Part II focuses on the IoT requirements that impact networking protocols and provides a layer-by-layer walkthrough of the protocol stack with emphasis on industry progress and key gaps. Part III introduces the concept of fog computing and describes the drivers for the technology, its constituent elements, and how it relates and differs from cloud computing. Part IV discusses the IoT services platform, the cornerstone of the solution followed by the security functions and requirements. Finally, Part V provides a treatment of the topic of connected ecosystems in IoT along with practical applications. It then surveys the latest IoT standards and discusses the pivotal role of open source in IoT. "Faculty will find well-crafted questions and answers at the end of each chapter, suitable for review and in classroom discussion topics. In addition, the material in the book can be used by engineers and technical leaders looking to gain a deep technical understanding of IoT, as well as by managers and business leaders looking to gain a competitive edge and understand innovation opportunities for the future." Dr. Jim Spohrer, IBM "This text provides a very compelling study of the IoT space and achieves a very good balance between engineering/technology focus and business context. As such, it is highly-recommended for anyone interested in this rapidly-expanding field and will have broad appeal to a wide cross-section of readers, i.e., including engineering professionals, business analysts, university students, and professors." 📖 **SOFTWARE QUALITY - ECSQ 2002** Jyrki Kontio, Reidar Conrad, 2003-08-01 Software professionals and companies live in a new world today. Increasingly complex systems need to be built faster and cheaper. While many of the established approaches in software quality are still valid, the software quality community is going through a paradigm shift that requires a re-assessment of our current method and tool portfolio, as well as creating new and more effective solutions. We have selected two themes for this conference to highlight this paradigm shift. Our first theme, "production of attractive and reliable software at internet speed" sums up the dilemma many software organisations face. In order to be competitive, software should contain advanced features and run reliably – yet it should be developed quickly and cost effectively for the right market window. Finding the right balance between these objectives is a critical question that will determine business success in the years to come. Our second theme, "production of software with a dynamic partnership network" highlights the current trend of using partnerships and

SUBCONTRACTORS AS INTEGRAL PLAYERS IN THE SOFTWARE DEVELOPMENT PROCESS. PARTNERSHIPS SOMETIMES NEED TO BE CREATED QUICKLY TO RESPOND TO A MARKET OPPORTUNITY, YET THE COSTS AND SPEED OF COOPERATION MUST BE COMPETITIVE. DIFFERENT COMPANIES HAVE DIFFERENT PROCESSES, QUALITY TOOLS AND CULTURES, YET THEY SHOULD COOPERATE SEAMLESSLY FOR THE BEST RESULT.
