Bandung, Global History, and International Law Luis Eslava,Michael

Fakhri,Vasuki Nesiah,2017-11-30 In 1955, a conference was held in Bandung, Indonesia that was attended by representatives from twenty-nine nations. Against the backdrop of crumbling European empires, Asian and African leaders forged new alliances and established anti-imperial principles for a new world order. The conference came to capture popular imaginations across the Global South and, as counterpoint to the dominant world order, it became both an act of collective imagination and a practical political project for decolonization that inspired a range of social movements, diplomatic efforts, institutional experiments and heterodox visions of the history and future of the world. In this book, leading international scholars explore what the spirit of Bandung has meant to people across the world over the past decades and what it means today. It analyzes Bandung's complicated and pivotal impact on global history, international law and, most of all, justice struggles after the end of formal colonialism.

Plant-derived Natural Products Anne E. Osbourn,Virginia Lanzotti,2009-07-07

Plants produce a huge array of natural products (secondary metabolites). These compounds have important ecological functions, providing protection against attack by herbivores and microbes and serving as attractants for pollinators and seed-dispersing agents. They may also contribute to competition and invasiveness by suppressing the growth of neighboring plant species (a phenomenon known as allelopathy). Humans exploit natural products as sources of drugs, flavoring agents, fragrances and for a wide range of other applications. Rapid progress has been made in recent years in understanding natural product synthesis, regulation and function and the evolution of metabolic diversity. It is timely to bring this information together with contemporary advances in chemistry, plant biology, ecology, agronomy and human health to provide a comprehensive guide to plant-derived natural products. Plant-derived natural products: synthesis, function and application provides an informative and accessible overview of the different facets of the field, ranging from an introduction to the different classes of natural products through developments in natural product chemistry and biology to ecological interactions and the significance of plant-derived

natural products for humans. In the final section of the book a series of chapters on new trends covers metabolic engineering, genome-wide approaches, the metabolic consequences of genetic modification, developments in traditional medicines and nutraceuticals, natural products as leads for drug discovery and novel non-food crops.
