Human Security in Disease and Disaster Natasha Lindstaedt, 2021-09-19 This timely new textbook lays bare the ways in which disease and disaster can turn politicians into global leaders or national liabilities. It explains the impact of crises on development and human security and explores how states and societies can respond more effectively. Written primarily for the student of politics, but also drawing from public health, public policy, and environmental studies, the book investigates the threats posed by disease and disasters, and demonstrates how states can shape the ways in which these crises unfold. Case studies include:

- Diseases such as Covid-19 and Ebola
- Natural disasters such as Typhoon Haiyan and the 2010 Haiti earthquake
- Manmade disasters such as the Yemen and Congo civil wars or famine

The book

dives deep into how state response to these challenges can impact political and economic stability and ends by exploring the role played by international institutions and international cooperation in addressing common challenges. This introductory textbook is perfect for undergraduate and masters courses exploring the expanding politics and human security issues surrounding disease and disasters. It will also be of interest to think tanks and policy communities looking for fresh insights to bring into professional practice.

Fibrous Proteins: Structures and Mechanisms David A.D. Parry, John M. Squire, 2017-01-18 This book provides the readers with an up-to-date review of the design, structure and function of a representative selection of fibrous proteins in both health and disease. The importance of the α -helical coiled coil, a conformational motif based on the heptad repeat in the amino acid sequence of all α -fibrous proteins (and parts of some globular proteins) is underlined by three Chapters devoted to its design, structure, function and topology. Specific proteins covered in the text and which depend on the coiled coil for their structure and function, include the intermediate filament proteins, tropomyosin, myosin, paramyosin, fibrin and members of the spectrin superfamily. Also described are fibrous proteins based on the β -pleated sheet and collagen conformations. Recombinant structural proteins, especially of silk and collagen, are discussed in the context of developing new biomaterials with varied applications. Established researchers and

postgraduate students in the fields of protein chemistry, biochemistry and structural biophysics will find *Fibrous Proteins: Structures and Mechanisms* to be an invaluable collection of topical reviews that describe the basic advances made in the field of fibrous proteins over the past decade. This book, written by recognized authorities in the field, provides a clear account of the current status of fibrous protein research and, in addition, establishes the basis for deciding the most appropriate directions for future activity, including the applications of protein engineering and the commercial exploitation of new biomaterials.

Toni Morrison Box Set Toni Morrison, 2019-10-29 A box set of Toni Morrison's principal works, featuring *The Bluest Eye* (her first novel), *Beloved* (Pulitzer Prize winner), and *Song of Solomon* (National Book Critics Award winner). Staring unflinchingly into the abyss of slavery, *Beloved* transforms history into a story as powerful as *Exodus* and as intimate as a lullaby. This spellbinding novel tells the story of Sethe, a former slave who escapes to Ohio, but eighteen years later is still not free. In *The New York Times* bestselling novel, *The Bluest Eye*, Pecola Breedlove, a young black girl, prays every day for beauty and yearns for normalcy, for the blond hair and blue eyes, that she believes will allow her to finally fit in. Yet as her dream grows more fervent, her life slowly starts to disintegrate in the face of adversity and strife. With *Song of Solomon*, Morrison transfigures the coming-of-age story as she follows Milkman Dead from his rustbelt city to the place of his family's origins, introducing an entire cast of strivers and seeresses, liars and assassins, the inhabitants of a fully realized black world. This beautifully designed slipcase will make the perfect holiday and perennial gift.

The Connections Between Ecology and Infectious Disease Christon J.

Hurst, 2018-08-30 This book summarizes current advances in our understanding of how infectious disease represents an ecological interaction between a pathogenic microorganism and the host species in which that microbe causes illness. The contributing authors explain that pathogenic microorganisms often also have broader ecological connections, which can include a natural environmental presence; possible transmission by vehicles such as air, water, and food; and interactions with other host species, including vectors for which the microbe either may or may not be pathogenic. This field of science has been dubbed disease ecology, and the chapters that examine it have been grouped into three sections. The first section introduces both the role of biological community interactions and the impact of biodiversity on infectious disease. In turn, the second section considers those diseases directly affecting humans, with a focus on waterborne and foodborne illnesses, while also examining the critical aspect of microbial biofilms. Lastly, the third section presents the ecology of infectious diseases from the perspective of their impact on mammalian livestock and wildlife as well as on humans. Given its breadth of coverage, the volume offers a valuable resource for microbial ecologists and biomedical scientists alike.

Uses of Inorganic Chemistry in Medicine Nicholas P Farrell, 2007-10-31
Metal-based drugs are a commercially important sector of the pharmaceutical business, yet most bioinorganic textbooks lack the space to cover comprehensively the subject of metals in medicine. *Uses of Inorganic Chemistry in Medicine* approaches an understanding of the topic in a didactic and systematic manner. The field of inorganic chemistry in medicine may

usefully be divided into two main categories - drugs which target metal ions in some form, whether free or protein-bound, and secondly, metal-based drugs where the central metal ion is usually the key feature of the mechanism of action. This latter category can further be subdivided into pharmacodynamic and chemotherapeutic applications, as well as those of imaging. The book summarises the chemical and biological studies on clinically used agents of lithium, gold and platinum, as well as highlighting the research on prospective new drugs, including those based on vanadium and manganese. The coverage allows a clear distinction between pharmacodynamic and therapeutic properties of metal-based drugs and focuses not only on those clinical agents in current use, but also on new drugs and uses. This book serves to fill an important niche, bridging bioinorganic and medicinal chemistry and will undoubtedly be of use to senior undergraduates and postgraduates, as well as being an invaluable asset for teachers and researchers in the discipline.

Enlivenment Andreas Weber, 2019-03-05 A new understanding of the Anthropocene that is based on mutual transformation with nature rather than control over nature. We have been told that we are living in the Anthropocene, a geological era shaped by humans rather than by nature. In *Enlivenment*, German philosopher Andreas Weber presents an alternative understanding of our relationship with nature, arguing not that humans control nature but that humans and nature exist in a commons of mutual transformation. There is no nature-human dualism, he contends, because the

fundamental dimension of existence is shared in what he calls aliveness. All subjectivity is intersubjectivity. Self is self-through-other. Seeing all beings in a common household of matter, desire, and imagination, an economy of metabolic and economic transformation, is "enlivenment." This perspective allows us to move beyond Enlightenment-style thinking that strips material reality of any subjectivity. To take this step, Weber argues, we need to supplant the concept of techné with the concept of poiesis as the element that brings forth reality. In a world not divided into things and ideas, culture and nature, reality arises from the creation of relationships and continuous fertile transformations; any thinking in terms of relationships comes about as a poetics. The self is always a function of the whole; the whole is equally a function of the individual. Only this integrated freedom allows humanity to reconcile with the natural world. This first English edition of Enlivenment has been expanded and updated from the German edition.
