The Fingerprint U. S. Department Justice,2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Naturaleza y Paisaje en las Artes Plásticas del Siglo XX. Estudio de la Obra "La Biblioteca del Bosque" de Miguel Ángel Blanco Ana Esther Maqueda Cuenca,2015-06-03 Tesis Doctoral / Disertación del año 2014 en eltema Arte - Escultura, plástica, Nota: SOBRESALIENTE CUM LAUDE, , Idioma: Español, Resumen: Hemos realizado un recorrido en la primera parte de nuestra tesis por las definiciones de los conceptos como naturaleza o paisaje, y la evolución de los mismos dentro el mundo del arte, donde aclaramos la complejidad que ha supuesto establecer un criterio unánime para definir el momento dentro de la historia de la pintura occidental, en la que ésta comienza a considerarse como pintura de paisaje. Concluyendo que aunque la temática del paisaje supone una inmersión paulatina desde que en 1508 Giorgione pintara La tempestad, es en Alemania, en el período del romanticismo, con representates como Caspar David Friedrich o Carl Gustav Carus, donde la representación del paisaje en la pintura se consolida como tal género. Hemos tratado este mismo aspecto en el mundo de la escultura, es decir, cómo la escultura comienza a relacionarse con el espacio natural en su historia, donde encontramos entre los expertos mayor unanimidad de criterios. Han sido esclarecedores los estudios que han centrado sus intereses en la transformación del pedestal, pues concluimos que este elemento y la evolución del mismo en la trayectoria propuesta por Brancusi, precedida de Rodin, será determinante en la relación que a partir de este momento se podrá establecer entre escultura y paisaje, conjuntamente con las transformaciones socio-culturales que se dieron en su momento. Comenzamos la introducción de esta investigación persiguiendo dar respuesta a una observación realizada sobre una obra de arte del orfismo respecto de otra ubicada dentro de las coordenadas del land art. Intuíamos la presencia de factores políticos, sociales y culturales que condicionarían los cambios necesarios para que el artista produjera en sus resultados plásticos, obras de arte tan distanciadas tanto en sus aspectos procesuales como conceptuales o formales, por mencionar alguno. Los dos ejemplos de los que partíamos (Delaunay Circular Forms, 1930 y Robert Smithson Espiral Jetty, 1970) han servido visualmente para marcar dos puntos dentro de la historia donde concluimos que el primero, estaría situado dentro de las coordenadas de la modernidad, mientras que el segundo, queda ubicado dentro de una etapa posterior denominada posmodernidad y de ahí las diferencias. Estos dos ejemplos de práctica artística, sirven como reflejo de los complejos procesos que tuvieron que darse dentro y fuera del mundo del arte para que éste pudiera comenzar a darse con otros nuevos comportamientos, metodologías, conceptos y resultados.

eCulture Alfredo M. Ronchi,2009-03-10 Do virtual museums really provide added value to end-users, or do they just contribute to the abundance of images? Does the World Wide Web save endangered cultural heritage, or does it foster a society with less variety? These and other related questions are raised and answered in this book, the result of a long path across the digital heritage landscape. It provides a comprehensive view on issues and achievements in digital collections and cultural content.

With this book, you'll learn how to solve statistical problems with Python code instead of mathematical formulas, using discrete probability distributions rather than continuous mathematics. Once you get the math out of the way, the Bayesian fundamentals will become clearer and you'll begin to apply these techniques to

real-world problems. Bayesian statistical methods are becoming more common and more important, but there aren't many resources available to help beginners. Based on undergraduate classes taught by author Allen B. Downey, this book's computational approach helps you get a solid start. Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation, prediction, decision analysis, evidence, and Bayesian hypothesis testing Get started with simple examples, using coins, dice, and a bowl of cookies Learn computational methods for solving real-world problems

Tapping State Government Information Sources Lori L. Smith,Daniel C. Barkley,Daniel D. Cornwall,Eric W. Johnson,J. Louise Malcomb,2003-11-30 Each state government produces large varieties and quantities of useful information that are largely unknown outside their state of origin. This book leads the public to the most useful information sources produced by each state, as well as to depository libraries that will facilitate more effective research. For each of the 50 states, important publications are detailed, along with information on how to obtain them. The publications' topics range from crime statistics to vital statistics, business statistics, health information, statistical abstracts, education directories, state budgets, economic indicators, state laws and legal information, and more. Tapping State Government Information Sources has a broader focus than previously published books in this subject area, most of which have focused solely on depository laws, useful state publications, or indexes to state publications. This book covers all three. The first chapter describes print and electronic sources that provide information about all 50 states. Each state's resources are then described in individual chapters. When possible, information about how to order a copy of the source is given, as are Web addresses for titles that are available online. At the beginning of each state chapter, the state's legal definition of public document or its equivalent is given, which may be of interest to librarians in states that are reexamining their own depository laws.

Metadata for Semantic and Social Applications Jane Greenberg,Wolfgang Klas,2008 Metadata is a key aspect of our evolving infrastructure for information management, social computing, and scientific collaboration. DC-2008 will focus on metadata challenges, solutions, and innovation in initiatives and activities underlying semantic and social applications. Metadata is part of the fabric of social computing, which includes the use of wikis, blogs, and tagging for collaboration and participation. Metadata also underlies the development of semantic applications, and the Semantic Web -- the representation and integration of multimedia knowledge structures on the basis of semantic models. These two trends flow together in applications such as Wikipedia, where authors collectively create structured information that can be extracted and used to enhance access to and use of information sources. Recent discussion has focused on how existing bibliographic standards can be expressed as Semantic Web vocabularies to facilitate the ingration of library and cultural heritage data with other types of data. Harnessing the efforts of content providers and end-users to link, tag, edit, and describe their information in interoperable ways (participatory metadata) is a key step towards providing knowledge environments that are scalable, self-correcting, and evolvable. DC-2008 will explore conceptual and practical issues in the development and deployment of semantic and social applications to meet the needs of specific communities of practice.

Biomarkers in Liver Disease Victor R. Preedy,Vinood B. Patel,2017-07-14 In the past decade there has been a major sea change in the way disease is diagnosed and investigated due to the advent of high throughput technologies, such as microarrays, lab on a chip, proteomics, genomics, lipomics, metabolomics etc. These advances have enabled the discovery of new and novel markers of disease relating to autoimmune disorders, cancers, endocrine diseases, genetic disorders, sensory damage, intestinal diseases etc. In many instances these developments have gone hand in hand with the discovery of biomarkers elucidated via traditional or conventional methods, such as histopathology or clinical biochemistry. Together with microprocessor-based data analysis, advanced statistics and bioinformatics these markers have been used to identify individuals with active disease or pathology as well as those who are refractory or have distinguishing pathologies. New analytical methods that have been used to identify markers of disease and is suggested that there may be as many as 40 different platforms. Unfortunately techniques and methods have not been readily transferable to other disease states and sometimes diagnosis still relies on single analytes rather than a cohort of markers. There is thus a demand for a comprehensive and focused evidenced-based text and scientific literature that addresses these issues. Hence the formulation of Biomarkers in Disease The series covers a wide number of areas including for example, nutrition, cancer, endocrinology, cardiology, addictions, immunology, birth defects, genetics, and so on. The chapters are written by national or international experts and specialists.
