Blindsight Peter Watts,2006-10-03 Hugo and Shirley Jackson award-winning Peter Watts stands on the cutting edge of hard SF with his acclaimed novel, *Blindsight* Two months since the stars fell... Two months of silence, while a world held its breath. Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a biologist so radically interfaced with machinery that he sees x-rays and tastes ultrasound. You send a pacifist warrior in the faint hope she won't be needed. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. And you send a synthesist—an

informational topologist with half his mind gone—as an interface between here and there. Pray they can be trusted with the fate of a world. They may be more alien than the thing they've been sent to find. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Before the Lights Go Out Maggie Koerth-Baker,2012-02-21 What you need to know now about America's energy future Hi, I'm the United States and I'm an oil-oholic. We have an energy problem. And everybody knows it, even if we can't all agree on what, specifically, the problem is. Rising costs, changing climate, peaking oil, foreign oil, public safety?if the fears are this complicated, then the solutions are bound to be even more confusing. Maggie Koerth-Baker?science editor at the award-winning blog BoingBoing.net?finally makes some sense out of the madness. Over the next 20 years, we'll be forced to cut 20 quadrillion BTU worth of fossil fuels from our energy budget, by wasting less and investing in alternatives. To make it work, we'll need to radically change the energy systems that have shaped our lives for 100 years. And the result will be neither business-as-usual, nor a hippie utopia. Koerth-Baker explains what we can do, what we can't do, and why The Solution is really a lot of solutions working together. This isn't about planting a tree, buying a Prius, and proving that you're a good person. Economics and social incentives

got us a country full of gas-guzzling cars, long commutes, inefficient houses, and coal-fired power plants out in the middle of nowhere, and economics and incentives will be the things that build our new world. Ultimately, change is inevitable. Argues we're not going to solve the energy problem by convincing everyone to live like it's 1900 because that's not a good thing. Instead of reverting to the past, we have to build a future where we get energy from new places, use it in new ways, and do more with less. Clean coal? Natural gas? Nuclear? Electric cars? We'll need them all. When you look at the numbers, you'll find that we'll still be using fossil fuels, nuclear, and renewables for decades to come. Looks at new battery technology, smart grids, passive buildings, decentralized generation, clean coal, and carbon sequestration. These are buzzwords now, but they'll be a part of your world soon. For many people, they already are. Written by the cutting edge Science Editor for Boing Boing, one of the ten most popular blogs in America

Strengthening Forensic Science in the United States National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community, 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However,

they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Reminiscences of Los Alamos 1943-1945 Lawrence Badash, J.O. Hirschfelder, H.P. Broida, 2012-12-06 Although the World War II efforts to develop nuclear weapons have inspired a very large literature, it struck us as noteworthy that virtually nothing existed in the form of firsthand accounts. Now It Can Be Told, by General Leslie Groves, the Manhattan Project's military commander, is probably the most prominent exception, but the scientists themselves seem to have shown little interest in publishing their

reminiscences. Believing that it would be not only worthwhile for posterity, but extremely interesting for the present generation to hear about the aspirations, fears, and activities of those who participated in this watershed of science and government collaboration, we arranged the public lecture series represented by this book. We chose to focus upon Los Alamos since the project's efforts culminated there. The isolated laboratory in New Mexico was created to design and construct the first atomic bombs. More scientific brainpower was accumulated there than at any time since Isaac Newton dined alone, and the interactions with this community are of sociological interest, as the results of their work are of political import.

aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.
