Innovative Learning Analytics for Evaluating Instruction Theodore W. Frick, Rodney D. Myers, Cesur Dagli, Andrew F. Barrett, 2021-07-19 Innovative Learning Analytics for Evaluating Instruction covers the application of a forward-thinking research methodology that uses big data to evaluate the effectiveness of online instruction. Analysis of Patterns in Time (APT) is a practical analytic approach that finds meaningful patterns in massive data sets, capturing temporal maps of students' learning journeys by combining qualitative and quantitative methods. Offering conceptual and research overviews, design principles, historical examples, and more, this book demonstrates how APT can yield strong, easily generalizable empirical evidence through big data; help students succeed in their learning journeys; and document the extraordinary effectiveness of First Principles of Instruction. It is an ideal resource for faculty and professionals in instructional design, learning engineering, online learning, program evaluation, and research methods.

Economic Dignity Gene Sperling, 2021-10-12 "Timely and important . . . It should be our North Star for the recovery and beyond." —Hillary Clinton "Sperling makes a forceful case that only by speaking to matters of the spirit can liberals root their belief in economic justice in people's deepest aspirations—in their sense of purpose and self-worth." —The New York Times When Gene Sperling was in charge of coordinating economic policy in the Obama White House, he found himself surprised when serious people in Washington told him that the Obama focus on health care was a distraction because it was "not focused on the economy." How, he asked, was the fear felt by millions of Americans of being one serious illness away from financial ruin not considered an economic issue? Too often, Sperling found that we measured economic success by metrics like GDP instead of whether the economy was succeeding in lifting up the sense of meaning, purpose, fulfillment, and security of people. In *Economic Dignity*, Sperling frames the way forward in a time of wrenching change and offers a vision of an economy whose guiding light is the promotion of dignity for all Americans.

Tailspin Steven Brill, 2019-04-02 In this revelatory narrative covering the years 1967 to 2017, Steven Brill gives us a stunningly cogent picture of the broken system at the heart of our society. He shows us how, over the last half century, America's core values—meritocracy, innovation, due process, free speech, and even democracy itself—have somehow managed to power its decline into dysfunction. They have isolated our best and brightest, whose positions at the top have never been more secure or more remote. The result has been an erosion of responsibility and accountability, an epidemic of shortsightedness, an increasingly hollow economic and political center, and millions of Americans gripped by apathy and hopelessness. By examining the people and forces behind the rise of big-money lobbying, legal and financial engineering, the demise of private-sector unions, and a hamstrung bureaucracy, Brill answers the question on everyone's mind: How did we end up this way? Finally, he introduces us to those working quietly and effectively to repair the damages. At once a diagnosis of our national ills, a history of their development, and a prescription for a brighter future, *Tailspin* is a work of riveting journalism—and a welcome antidote to political despair.

The Oxford Handbook of Exercise Psychology Edmund O. Acevedo, 2012-04-13 Awareness of the importance of exercise and physical activity to optimal physical and mental health has never been greater. It is widely acknowledged that physical inactivity is a leading cause of death, yet statistics show less than 50% of Americans participate in regular physical activity. This information highlights the public health challenge of increasing participation in physical activity to enhance physical health and to buoy the psychological benefits associated with physical activity. The *Oxford Handbook of Exercise and Psychology* is an authoritative and comprehensive presentation of the breadth and depth of empirical contributions utilizing state-of-the-science theories and approaches in exercise psychology. Chapters are authored by leading investigators across the globe who have made significant scientific contributions addressing the behavioral aspects of physical activity. Sections of the book address the effects of physical activity on mental health; knowledge gathered utilizing psychobiological perspectives; behavioral factors that impact exercise motivation; scientific contributions addressing the physical activity benefits with special populations, including individuals with physical disabilities, older adults and cancer patients; and promising areas for additional investigation. Each chapter presents a summary of scientific advancements in the topic area as a foundation for future investigation. Fueled by a broad range of disciplines and interdisciplinary approaches, the field of exercise psychology is

growing, and this comprehensive handbook will be the perfect resource for students, researchers, and physicians interested in exercise motivation and the mental health benefits of physical activity.

Middleware 2000 Joseph Sventek,Geoffrey Coulson,2003-06-29 Middleware is everywhere. Ever since the advent of sockets and other virtual-circuit abstractions, researchers have been looking for ways to incorporate high-value concepts into distributed systems platforms. Most distributed applications, especially Internet applications, are now programmed using such middleware platforms. Prior to 1998, there were several major conferences and workshops at which research into middleware was reported, including ICODP (International Conference on Open Distributed Processing), ICDP (International Conference on Distributed Platforms) and SDNE (Services in Distributed and Networked - environments). Middleware'98 was a synthesis of these three conferences. Middleware 2000 continued the excellent tradition of Middleware'98. It provided a single venue for reporting state-of-the-art results in the provision of distributed systems platforms. The focus of Middleware 2000 was the design, implementation, deployment, and evaluation of distributed systems platforms and architectures for future networked environments. Among the 70 initial submissions to Middleware 2000, 21 papers were selected for inclusion in the technical program of the conference. Every paper was reviewed by four members of the program committee. The papers were judged according to their originality, presentation quality, and relevance to the conference topics. The accepted papers cover various subjects such as caching, reflection, quality of service, and transactions.

In-Work Poverty in Europe Luca Ratti,2022-07-06 In-work poverty is a reality for too many persons in the European Union (EU). Although everyone is in agreement that poverty must be reduced, rarely is there a specific focus on the plight of those who, despite working, are poor. This important book is the first to unreservedly meet the challenge of defining, measuring, and comparing the legal regimes to combat in-work poverty in Europe, fully attending to the strengths and shortcomings of indicators and allowing the assessment of comparative best practices among the Member States. The distinguished contributors each describe and analyse this complex and multidimensional phenomenon, with its manifold and intertwined causes, in relation to such factors as the following: employment-related factors (wage, type of contract, atypical employment); worker's socio-demographic characteristics (level of education, gender, age, country of birth); size and composition of household; household work intensity; and institutional factors (childcare, flexible work arrangements, employment protection, housing, technological change). In a major innovation, the book's methodology approaches the 'working poor' by distinctly defining four groups of vulnerable and under-represented persons (VUPs) with detailed statistical information on in-work poverty in each group. Following an in-depth introduction focusing on the definition and ramifications of the concept of in-work poverty - including a discussion of legal scholarship and relevant EU instruments - the situations in seven EU Member States (Belgium, Germany, Italy, Luxembourg, the Netherlands, Poland, and Sweden) are compared, revealing important variations. For each of the VUP groups, these chapters explain their composition at the national level and assess the impact of regulation on the incidence of in-work poverty. The last chapter highlights differences and similarities in an attempt to find patterns and identify common regulatory problems and best practices. The book's comparative perspective greatly assists in understanding in-work poverty determinants, appraising varieties of relevant national policies, and stimulating the development of effective legal measures. With its close analysis of the limitations of existing measurement indicators, the book sheds light on the role of regulation in the prevalence and persistence of the phenomenon and equips policymakers at the EU and national levels with targeted tools to tackle this severe social problem.

Part-Time for All Jennifer Nedelsky,Tom Malleson,2023-05-26 An innovative view of how everyone doing part-time work and part-time caregiving would promote flourishing families, free time, equality, and the true value of care. The way that Western countries approach work and care for others is fundamentally dysfunctional. The amount of time spent at work places unsustainable stress on families, particularly in the face of rising inequality, while those who perform care are underpaid and their labor undervalued. In Part-Time for All, Jennifer Nedelsky and Tom Malleson propose a plan to radically restructure both work and care. As such, they offer a solution to four pressing problems: the inequality of caregivers; family stress from competing demands of work and care; chronic time scarcity; and policymakers who are ignorant about the care that life requires--the care/policy divide. Nedelsky and Malleson argue that no capable adult should do paid work for more than 30 hours per week, so that they can contribute substantial amounts of time to unpaid care for family, friends, or other communities of care. While the authors focus primarily on human-to-human care, they also include care for the earth as a vital part of this shift. All of the elements of Nedelsky and Malleson's proposal already exist piecemeal in various countries. What is needed is to integrate the key reforms and scale them up. The result is an actionable plan to motivate widespread take-up of part-time work and part-time care. Highlighting how these new norms can create synergies of institutional transformation while fostering a cultural shift in the value of care and work, this care manifesto identifies the deep changes that are needed and lays out a feasible path forward.
