*Splitting the Atom* Alan Morton, 2008 *Splitting the Atom* investigates the theories and practical developments that led to the turning-point in nuclear science -the realisation that splitting the nucleus of an atom created energy that could be harnessed, for good and for ill.

*Advanced Topics in Theoretical Chemical Physics* J. Maruani, Roland Lefebvre, Erkki J. Brändas, 2013-11-27 *Advanced Topics in Theoretical Chemical Physics* is a collection of 20 selected papers from the scientific presentations of the Fourth Congress of the International Society for Theoretical Chemical Physics (ISTCP) held at Marly-le-Roi, France, in July 2002. *Advanced Topics in Theoretical Chemical Physics* encompasses a broad spectrum in which scientists place special emphasis on theoretical methods in chemistry and physics. The chapters in the book are divided into five sections: I: Advances Chemical Thermodynamics II: Electronic Structure of Molecular Systems III: Molecular Interaction and Dynamics IV: Condensed Matter V: Playing with Numbers This book is an invaluable resource for all academics and researchers interested in theoretical, quantum or statistical, chemical physics or physical chemistry. It presents a selection of some of the most advanced methods, results and insights in this exciting area.

**The Philosophical Foundations of Classical Chinese Medicine** Keekok Lee, 2017-05-04 This book makes Classical Chinese Medicine (CCM) intelligible to those who are not familiar with the tradition, many of whom may choose to dismiss it off-hand or to assess it negatively) . Keekok Lee uses two related strategies: arguing that all science and therefore medicine cannot be understood without excavating its philosophical presuppositions and showing what those presuppositions are in the case of CCM compared with those of biomedicine. Such excavations enable Lee in turn to demonstrate the following theses: (1) the metaphysical/ontological core of a medical system entails its own methodology, how to understand, diagnose and treat an illness/disease; (2) CCM rests on process-ontology, is Wholist, its general mode of thinking is Contextual-dyadic, its implicit logic is multi-valent, its model of causality is non-linear and multi-factorial; (3) Biomedicine (in the main) rests on thing-ontology and dualism, is Reductionist, its logic is classical bi-valent, its model of causality is linear and monofactorial; (4) hence to condemn CCM as “unscientific”/“pseudo-scientific”/plain “mumbo-jumbo” while privileging Biomedicine as the Gold Standard of scientificity is as absurd as to judge a cat to be inferior to a dog, using the criteria of “goodness” embodied in a dog-show.

**The Semantic Web – ISWC 2006** Isabel Cruz, Stefan Decker, Dean Allemang, Chris Preist, Daniel Schwabe, Peter Mika, Mike Uschold, Lora Aroyo, 2006-11-03 This book constitutes the refereed proceedings of the 5th International Semantic Web Conference, ISWC 2006, held in Athens, GA, USA in November 2006. It features more than 52 papers that address all current issues in the field of the semantic Web, ranging from theoretical aspects to various applied topics. An additional 14 papers detail applications in government, public health, public service, academic, and industry.

**The Physics and Chemistry of the Interstellar Medium** A. G. G. M. Tielens, 2005-08-25 This work provides a comprehensive overview of our theoretical and observational understanding of the interstellar medium of galaxies.

With emphasis on the microscopic physical and chemical processes in space, and their influence on the macroscopic structure of the interstellar medium of galaxies, the book includes developments in this area of molecular astrophysics. The various heating, cooling, and chemical processes relevant for the rarefied gas and submicron-sized dust grains that constitute the interstellar medium are discussed in detail. This provides a firm foundation for an in-depth understanding of the ionized, neutral atomic, and molecular phases of the interstellar medium. The physical and chemical properties of large polycyclic aromatic hydrocarbon molecules and their role in the interstellar medium are highlighted, and the physics and chemistry of warm and dense photodissociation regions are discussed. This is an invaluable reference source for advanced undergraduate and graduate students, and research scientists.

*Human Chemistry (Volume One)* Libb Thims, 2007-09-01 Human chemistry is the study of bond-forming and bond-breaking reactions between people and the structures they form. People often speak of having either good or bad chemistry together: whereby, according to consensus, the phenomenon of love is a chemical reaction. The new science of human chemistry is the study of these reactions. Historically, human chemistry was founded with the 1809 publication of the classic novella *Elective Affinities*, by German polymath Johann von Goethe, a chemical treatise on the origin of love. Goethe based his human chemistry on Swedish chemist Torbern Bergman's 1775 chemistry textbook *A Dissertation on Elective Attractions*, which itself was founded on Isaac Newton's 1687 supposition that the cause of chemical phenomena may 'all depend upon certain forces by which the particles of bodies, by some causes hitherto unknown, are either mutually impelled towards each other, and cohere in regular figures, or are repelled and recede from one another'; which thus defines life.

*Teaching Science to English Language Learners* Joyce Nutta, Nazan U. Bautista, Malcolm B. Butler, 2010-09-13 Books in the Teaching English Language Learners (ELLs) across the Curriculum Series are written specifically for pre- and in-service teachers who may not have been trained in ELL techniques, but still find themselves facing the realities and challenges of today's diverse classrooms and learners. Each book provides simple and straightforward advice on how to teach ELLs through a given subject area, and how to teach content to ELLs who are at different levels of English language proficiency than the rest of their class. Authored by both language and content area specialists, each volume arms readers with practical, teacher-friendly strategies, and subject-specific techniques. *Teaching Science to English Language Learners* offers science teachers and teacher educators a straightforward approach for engaging ELLs learning science, offering examples of easy ways to adapt existing lesson plans to be more inclusive. The practical, teacher-friendly strategies and techniques included here are proven effective with ELLs, and many are also effective with all students. The book provides context-specific strategies for the full range of the secondary sciences curriculum, including physical science, life science, earth and space science, science as inquiry, and history and nature of science and more. A fully annotated list of web and print resources completes the book, making this a one volume reference to help science teachers meet the challenges of including all learners in effective instruction. Special features: practical examples of science exercises make applying theory to practice simple when teaching science to ELLs an overview of the National Science Education Standards offers useful guidelines for effective instructional and assessment practices for ELLs in secondary grades graphs, tables, and illustrations provide additional access points to the text in clear, meaningful ways.

**Variation and change in the lexicon** Mark Kaunisto, 2015-07-14 The present volume is a corpus-based study of the occurrence, variation, and change in the use of English adjective pairs in -ic and -ical over several centuries.

The study involves the analysis of large, multi-million-word corpora representing the English language at various stages. It examines the nature of competition between the two affixes: what kind of rivalry existed, what kinds of words entered into competition, and in what ways the rivalry was resolved. The book presents close studies of six notably differentiated -ic/-ical adjective pairs, namely classic/classical, comic/comical, economic/economical, electric/electrical, historic/historical, and magic/magical, as well as commentaries on some 40 other -ic/-ical pairs, which manifest different types of shifts in use through history. It also includes critical discussion of general perceptions on and approaches to the practical use of corpora, stressing the importance of close and careful study of the materials under analysis. It further emphasises the value of consulting a variety of sources alongside corpora, including dictionaries and language usage manuals. This volume is of interest to language scholars in many fields, including corpus linguistics, diachronic linguistics, semantic change, lexicology, and word formation.

*Mysteries of the Universe and Planet Earth* Herman R. Habegger, 2013-08-21 You will find in Herm Habegger's book a challenge to your thinking about the Universe, and you will discover thoughts and facts which support faith in God the Creator. It is not often that someone will attempt to write such a treatise; but Herm has attacked this age old subject with thoughtful research and supporting material. It will allow you to study, think and draw your own conclusion as to the Author and Finisher of the Universe and Planet Earth. I encourage you to read and study Herman Habegger's book! Dennis W. Dawes, FACHE Retired President/CEO Hendricks Regional Health Herman has written a gem of a book! He shows us, non-Christians and Christians alike, that we have nothing to fear from the Bible AND Science. They, in fact, complement each other in our understanding of the world in which we live, and how it was formed. Our universe, Planet Earth and all living things have and are constantly changing. They are evolving according to God the Creator's divine plan and nothing in science has disproved it, nor will. Through Science, the unfathomable complexity and magnificence is manifested. COL Charles Allen Holt, D.O., FAAFP Board-certified, Family Practice physician University of Kansas, Kirksville College of Osteopathic Medicine Herman Habegger's work serves as a worthy introduction to some of the amazing marvels of our complex universe from the unfathomable vastness of the cosmos down to the subatomic level of the Higgs boson or "God particle." The reader will come to appreciate our planet's uniqueness and fine-tuning for the support of life, the advent of life from the irreducible complexity of the genetic code and other cell components working together, giving glory to the Creator. The elegantly designed structures of life forms, especially those of humans, are examples of divine engineering that are incontrovertible evidence for purposeful creation by God. Brian D. Clarke, M.D. Diplomate of the American Board of Internal Medicine, Gastroenterology Indiana University School of Medicine

**Maria Goeppert Mayer** Joseph Ferry, 2003 A biography of Maria Goeppert Mayer, a physicist who contributed to the development of the atomic bomb and who, in 1963, was cowinner of the Nobel Prize in Physics for her work on the nuclear shell model theory.

*Unforgotten Hero* Jim Escalle, 2013-07-27 *Unforgotten Hero* tells the captivating life story of Second Lieutenant Jimmy L. Escalle, a U.S. Air Force fighter pilot who became missing in action during the Korean War. Growing up in a small farming town in California's San Joaquin Valley during the 1930s and 1940s, Jim was a devoted son, a caring older brother, a talented athlete, and a young man of moral character who always put others first. He

started high school as the Second World War was at its peak, and graduated during a time of transition within America and around the world. He had always wanted to fly airplanes someday, and with the introduction of jet propulsion during his high school years, he dreamed of becoming a jet pilot. Called to serve his country after the Korean War began, his dream became a reality when he joined the Air Force and eventually got the opportunity to fly the F-86 Sabre, regarded as the most advanced jet fighter of its time. Soon after arriving in Korea he went on his first missions, which were MiG Alley sweeps. However, since Jim was assigned to a fighter-bomber squadron, the majority of his combat missions were air-to-ground. These were the most dangerous missions. In Korea, more pilots had been killed or listed as MIA due to being shot down by ground fire rather than enemy aircraft. For Jim, this fact was realized only five weeks before the armistice was signed. He paid the ultimate price for freedom when he disappeared while on a combat mission over North Korea and was never seen or heard from again.

Presidents from Eisenhower through Johnson, 1953-1969 John King, John R. Vile, 2005-12-30 Throughout the 1950s and 1960s Communism and the Cold War pervaded almost every aspect of American policy and concern. Eisenhower's Highway Act sought to strengthen America with the sort of roads system and military advantage Germany's Autobahn provided in World War II; Kennedy looked to space, the Peace Corps, and the schools to improve America's actual and perceived status in the eyes of the world; LBJ continually found concerns about Southeast Asia pressing in upon him notwithstanding his desire to found a new Great Society in the United States. However, despite the Cold War and demands of international politics, these three presidents were continually involved in critical debates about the domestic future of America, and their roles and victories in these debates have left deep impressions upon American society. This volume provides readers with access to the primary documents—both foreign and domestic—that reflect the debates that have had such a strong influence in shaping the United States. This resource covers thirty-two key issues and initiatives of the Eisenhower, Kennedy, and Johnson presidencies. An introductory overview of each president's administration provides a useful window through which to assess the specific debates and documents addressed, and each of these individual issues is also supplemented by a brief introductory discussion. Among the issues covered are: Eisenhower's attempt to establish a new look for national defense, the Eisenhower doctrine, and the National Defense Education Act; Kennedy's Alliance for Progress and Peace Corps programs, his role in Cuba, his plans for America in space, and his work on arms control and the Limited Test Ban Treaty; and Johnson's Civil Rights Act, Model Cities Program, war on poverty, and role in the ground and air wars in Vietnam. A timeline provides a chronological backdrop for the subject, and recommended readings following each section offer helpful direction for further study.

Atom.htm: Bestsellers in 2023 The year 2023 has witnessed a noteworthy surge in literary brilliance, with numerous captivating novels enthralling the hearts of readers worldwide. Lets delve into the realm of bestselling books, exploring the fascinating narratives that have charmed audiences this year. Atom.htm : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Atom.htm : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This captivating historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's absorbing storytelling and compelling characters

transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and gripping novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
