**Convex Optimization** Stephen P. Boyd,Lieven Vandenberghe,2004-03-08 Convex optimization problems arise frequently in many different fields. This book provides a comprehensive introduction to the subject, and shows in detail how such problems can be solved numerically with great efficiency. The book begins with the basic elements of convex sets and functions, and then describes various classes of convex optimization problems. Duality and approximation techniques are then covered, as are statistical estimation techniques. Various geometrical problems are then presented, and there is detailed discussion of unconstrained and constrained minimization problems, and interior-point methods. The focus of the book is on recognizing convex optimization problems and then finding the most appropriate technique for

solving them. It contains many worked examples and homework exercises and will appeal to students, researchers and practitioners in fields such as engineering, computer science, mathematics, statistics, finance and economics.

*Terrorism and Homeland Security* Paul Viotti,Michael Opheim,Nicholas Bowen,2008-06-17 Despite the fact that the Department of Homeland Security (DHS) has been active since November of 2002, the American homeland is still not secure from terrorist attack. What passes as DHS strategy is often just a list of objectives with vague references to the garnering of national resources, and the marshalling of support from other nations. Drawing on the expertise of several of the nation's leading reseachers and policy experts, *Terrorism and Homeland Security: Thinking Strategically About Policy* provides policymakers with a much needed starting point for the creation of an effective coherent national security strategy. Its origins pre-dating 9-11, this volume grew out of an extensive project featuring the participation of various institutions including the Army War College. The primary goal: develop a strategy that optimizes security with minimal infringement on rights and liberties After addressing points salient to a central strategy,

the book then identifies the domestic and external elements that need to be addressed in building such a strategy. To this end, it examines the nature of terrorist threats, looks at challenges specific to various weapons of mass destruction, and then goes beyond terrorism to discuss safeguarding society and its infrastructure from natural disasters. In concluding, the editors present a number of preliminary suggestions. It is hoped that policymakers and others may take these suggestions into account when developing a comprehensive national security strategy.

*Timber Trafficking in Vietnam* Ngoc Anh Cao,2018-02-09 This book is the first systematic investigation into the problem of timber trafficking in Vietnam, providing a detailed understanding of the typology of, victimization from, and key factors driving this crime. The book first reveals a multifaceted pattern of timber trafficking in Vietnam, comprising five different components: harvesting, transporting, trading, supporting, and processing. It then assesses the crime's victimization from timber trafficking. Thanks to the employment of a broad conceptual framework of human security, Cao reveals that timber trafficking has substantial harmful

impacts on all seven elements of human security: economic, food, health, environmental, personal, community, and political; whilst being closely interconnected, they vary between different groups of victims. Cao concludes by offering five solutions to better control of timber trafficking in the context of Vietnam, which crucially involve refining the current policy framework of forest governance and improving the efficiency of law enforcement. A wide-ranging and timely study, this book will hold particular appeal for scholars of green criminology and environmental harm.
