Genealogy 101 Barbara Renick,2003-04-23 A recent Maritz Poll reported that 60% of Americans are interested in their family history. And with good reason. Through genealogy, you can go back into history to meet people who have had more influence on your life than any others -- your ancestors. And the better you get to know your ancestors, the better you will get to know yourself: the who's and what's and why's of you. Barbara Renick, a nationally-known lecturer on genealogy, tells the uninitiated researcher the steps needed to find out who their ancestors really were, and brings together for even the more experienced genealogical researchers the important principles and practices. She covers such topics as the importance of staying organized and how to go about it; where and how to look for information in libraries, historical societies, and on the internet; recognizing that just because something is in print doesn't mean it's right; and how to prepare to visit the home where your ancestors lived. Genealogy 101 is the first book to read when you want to discover who your ancestors were, where they lived, and what they did.

Geofluids Vratislav Hurai,Monika Huraiová,Marek Slobodník,Rainer Thomas,2015-05-14 Geofluids: Developments in Microthermometry, Spectroscopy, Thermodynamics, and Stable Isotopes is the definitive source on paleofluids and the migration of hydrocarbons in sedimentary basins—ideal for researchers in oil and gas exploration. There's been a rapid development of new non-destructive analytical methods and interdisciplinary research that makes it difficult to find a single source of content on the subject of geofluids. Geoscience researchers commonly use multiple tools to interpret geologic problems, particularly if the problems involve fluid-rock interaction. This book perfectly combines the techniques of fluid inclusion microthermometry, stable isotope analyses, and various types of spectroscopy, including Raman analysis, to contribute to a thorough approach to research. Through a practical and intuitive step-by-step approach, the authors explain sample preparation, measurements, and the interpretation and analysis of data related to thermodynamics and mineral-fluid equilibria. Features working examples in each chapter with step-by-step explanations and calculations Broad range of case studies aid the analytical and experimental data Includes appendices with equations of state, stable isotope fractionation equations, and Raman identification tables that aid in identification of fluid inclusion minerals Authored by a team of expert scientists who have

more than 60 years of related experience in the field and classroom combined

Bennett-Kapusniak,2018-06-01 Inspired by trends in U.S. public libraries, this book teaches librarians how to create a welcoming environment that enriches, enlightens, and engages their library's growing aging community. The number of adults aged 50+ coming to public libraries is steadily increasing. These patrons include active, healthy, tech-savvy professionals; people who have little or no computer training; retirees; travelers; and those who have age-related health and behavior issues. Managing Agricultural Greenhouse Gases Mark Liebig,A.J. Franzluebbers,Ronald F Follett,2012-10-16 Global climate change is a natural process that currently appears to be strongly influenced by human activities, which increase atmospheric concentrations of greenhouse gases (GHG). Agriculture contributes about 20% of the world's global radiation forcing from carbon dioxide, methane and nitrous oxide, and produces 50% of the methane and 70% of the nitrous oxide of the human-induced emission. Managing Agricultural Greenhouse Gases synthesizes the wealth of information generated from the GRACEnet (Greenhouse gas Reduction through Agricultural Carbon Enhancement network) effort with contributors from a variety of backgrounds, and reports findings with important international applications. Frames responses to challenges associated with climate change within the geographical domain of the U.S., while providing a useful model for researchers in the many parts of the world that possess similar ecoregions Covers not only soil C dynamics but also nitrous oxide and methane flux, filling a void in the existing literature Educates scientists and technical service providers conducting greenhouse gas research, industry, and regulators in their agricultural research by addressing the issues of GHG emissions and ways to reduce these emissions Synthesizes the data from top experts in the world into clear recommendations and expectations for improvements in the agricultural management of global warming potential as an aggregate of GHG emissions
