CLOUD AND INTERNET SECURITY Binh Nguyen, A while back I wrote two documents called 'Building a Cloud Service' and the 'Convergence Report'. They basically documented my past experiences and detailed some of the issues that a cloud company may face as it is being built and run. Based on what had transpired since, a lot of the concepts mentioned in that particular document are becoming widely adopted and/or are trending towards them. This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to security. Once again, we will use past experience, research, as well as current events trends in order to write this particular report. Personal experience indicates that keeping track of everything and updating large scale documents is difficult and depending on the system you use extremely cumbersome. The other thing readers have to realise is that a lot of the time even if the writer wants to write the most detailed book ever written it's quite simply not possible. Several of my past works (something such as this particular document takes a few weeks to a few months to write depending on how much spare time I have) were written in my spare time and between work and getting an education. If I had done a more complete job they would have taken years to write and by the time I had completed the work updates in the outer world would have meant that the work would have meant that at least some of the content would have been out of date. Dare I say it, by the time that I have completed this report itself some of the content may have come to fruition as was the case with many of the technologies with the other documents? I very much see this document as a starting point rather than a complete reference for those who are interested in technology security. Note that the information contained in this document is not considered to be correct nor the only way in which to do things. It's a mere guide to how the way things are and how we can improve on them. Like my previous work, it should be considered a work in progress. Also, note that this document has gone through many revisions and drafts may have gone out over time. As such, there will be concepts that may have been picked up and adopted by some organisations while others may have simply broken cover while this document was being drafted and sent out for comment. It also has a more strategic/business slant when compared to the original document which was more technically orientated. No illicit activity (as far as I know and have researched) was conducted during the formulation of this particular document. All information was obtained only from publicly available resources and any information or concepts that are likely to be troubling has been redacted. Any relevant vulnerabilities or flaws that were found were reported to the relevant entities in question (months have passed). Feedback/credit on any ideas that are subsequently put into action based on the content of this document would be appreciated. Any feedback on the content of this document is welcome. Every attempt has been made to ensure that the instructions and information herein are accurate and reliable. Please send corrections, comments, suggestions and questions to the author. All trademarks and copyrights are the property of their owners, unless otherwise indicated. Use of a term in this document should not be regarded as affecting the validity of any trademark or service mark. The author would appreciate and consider

it courteous if notification of any and all modifications, translations, and printed versions are sent to him. Please note that this is an organic document that will change as we learn more about this new computing paradigm. The latest copy of this document can be found either on the author's website, blog, and/or <http://www.tldp.org/>

Linux+ David Engle, Cisco Learning Institute, 2011-02-22 A preparatory text for the CompTia Linux+ (Exam# XK0-001). The purpose of this textbook is to prepare the reader to successfully complete the latest CompTIA Linux+ Certification Exam, which requires that the person seeking certification possess a working knowledge of Planning and Implementation, Installation, Configuration, Administration, Systems Maintenance, and Troubleshooting. These specific areas of required knowledge are provided inside the front cover of this book. It is suitable for readers and students in computer engineering technology, electrical engineering technology, networking technology and telecommunications technology programs, corporations, and government agencies. Linux has become popular over a relatively short period of time. There are literally thousands of programmers who have an active role in developing Linux, with hundreds of ongoing projects using Linux and various hardware for many purposes. This product is a blended educational and training solution that combines a printed text, a lab experience and an online web-based curriculum that can

be delivered anytime and anywhere there is an internet connection. Students are provided with ample resource information in the text as well as from the online course. The online course includes hundreds of FLASH animations and graphics that allow a level of engagement not possible by using a text alone. It includes an online component that allows students to take the tests electronically. Once the student completes the exam it is graded; the grades are stored in the instructor's electronic gradebook and the student is provided with a Personalized Feedback that leads them to the points missed on the exam. This feature helps students and teachers ensure that the appropriate level of proficiency is reached for each objective. The Cisco Learning Institute is a 501 C3 not-for-profit corporation dedicated to helping teachers and students use technology to enhance the learning experience. It has developed a variety of e-learning tools over the past five years for the purpose of authoring and delivering e-learning course material. The Cisco Networking Academy Program is a worldwide deployment of e-learning courses in the IT area with over 12,000 sites and 500,000 students currently taking courses, translating into the largest e-learning deployment in the world. The content delivery tools developed by the Cisco Learning Institute called Virtuoso deliver the content to the students and teachers in this extraordinarily successful program, and now the benefit of those tools is available to teachers and students preparing for CompTIA certification exams. The products developed by Cisco Learning Institute for Prentice Hall are all powered by Virtuoso.

HTML and CSS Jon Duckett, 2011-11-08 A full-color introduction to the basics of HTML and CSS! Every day, more and more people want to learn some HTML and CSS. Joining the professional web designers and programmers are new audiences who need to know a little bit of code at work (update a content management system or e-commerce store) and those who want to make their personal blogs more attractive.
