Making a World of Difference National Academy of Engineering,2014-01-01 Fifty years ago, the National Academy of Engineering (NAE) was founded by the stroke of a pen when the National Academy of Sciences Council approved the NAE's articles of organization. Making a World of Difference commemorates the NAE anniversary with a collection of essays that highlight the prodigious changes in people's lives that have been created by engineering over the past half century and consider how the future will be similarly shaped. Over the past 50 years, engineering has transformed our lives literally every day, and it will continue to do so going forward, utilizing new capabilities, creating new applications, and providing ever-expanding services to people. The essays of Making a World of Difference discuss the seamless integration of engineering into both our society and our daily lives, and present a vision of what engineering may deliver in the next half century.

Network Access, Regulation and Antitrust Diana L. Moss,2005-03-04 The rapid growth of network industries has generated much comment amongst academics and policy makers. This timely volume takes an interdisciplinary, case study-based approach to examining network issues and experiences in order to develop recommendations that can inform antitrust, regulatory and legislative policy. Legal, economic, political and institutional aspects of network access are analyzed. The first part of the volume focuses on five topics that are central to reasoned analysis of the access problem. The second part presents ten case studies of network access in the energy, transportation, telecommunications, internet and banking industries. The volume concludes with comparisons and contrasts across the cases and policy recommendations. Network Access, Regulation and Antitrust will prove invaluable to students of business, economics, law and economics and industrial economics, policy makers and academics working in the field.

Free for All Elliot King,Medill School of Journalism,2010-03-29 Traces the development of the news media, from the emergence of newspapers in the 16th century to the rise of broadcasting, the Internet and social media, in book that looks at how technology has changed the journalistic landscape. By the coauthor of The Online Journalist. Original.

Tracing Your Irish Family History on the Internet Chris Paton,2013-10-19 “A thorough and informative guide . . . with as many references to websites for Northern Irish genealogy as for the Republic of Ireland.” —Who Do You Think You Are Magazine Ireland has experienced considerably more tragedy when it comes to the preservation of resources for family historians than its close neighbor Britain. Many of the nation’s primary records were lost during the civil war in 1922 and through other equally tragic means. But in this new book Chris Paton, the Northern-Irish-born author of the bestselling Tracing Your Family History on the Internet, shows that not only has a great deal of information survived, it is also increasingly being made available online. Thanks to the pioneering efforts of the Public Record Office of Northern Ireland, the National Archives of Ireland, organizations such as FindmyPast Ireland, Ancestry.co.uk and RootsIreland, and the massive volunteer genealogical community, more and more of Ireland’s historical resources are accessible from afar. As well as exploring the various categories of records that the family historian can turn to, Chris Paton illustrates their use with fascinating case studies. He fully explores the online records available from both the north and the south from the earliest times to the present day. Many overseas collections are also included, and he looks at social networking in an Irish context where many exciting projects are currently underway. His book is an essential introduction and source of reference for anyone who is keen to trace their Irish roots. “Chris Paton has produced this much-needed book for researchers tracing Irish roots, pulling together all the current online resources and expert advice into one handy guide.” —Family Tree Magazine

All the Facts James W. Cortada,2016-03-16 All the Facts presents a history of the role of information in the United States since 1870, when the nation began a nearly 150-year period of economic prosperity and technological and scientific transformations. James Cortada argues that citizens and their institutions used information extensively as tools to augment their work and private lives and that they used facts to help shape how the nation evolved during these fourteen decades. He argues that information's role has long been a critical component of the work, play, culture, and values of this nation, and no more so than during the twentieth century when its function in society expanded dramatically. While elements of this story have been examined by thousands of scholars---such as the role of radio, newspapers, books, computers, and the Internet, about such institutions as education, big business, expanded roles of governments from town administration to the state house, from agriculture to the services and information industries---All the Facts looks at all of these elements holistically, providing a deeper insight into the way the United States evolved over time. An introduction and 11 chapters describe what this information ecosystem looked like, how it evolved, and how it was used. For another vast layer of information about this subject the reader is directed to the detailed bibliographic essay in the back of this book. It includes a narrative history, case studies in the form of sidebars, and stories illustrating key points. Readers will find, for example, the story of how the US postal system helped create today's information society, along with everything from books and newspapers to TV, computers, and the Internet. The build-up to what many today call the Information Age took a long time to achieve and continues to build momentum. The implications for the world, and not just for the United States, are as profound as any mega-trend one could identify in the history of humankind. All the Facts presents this development thoroughly in an easy-to-digest format that any lover of history, technology, or the history of information and business will enjoy.

History in the Digital Age Toni Weller,2012-11-27 The digital age is affecting all aspects of historical study, but much of the existing literature about history in the digital age can be alienating to the traditional historian who does not necessarily value or wish to embrace digital resources. History in the Digital Age takes a more conceptual look at how the digital age is affecting the field of history for both scholars and students. The printed copy, the traditional archive, and analogue research remain key constitute parts for most historians and for many will remain precious and esteemed over digital copies, but there is a real need for historians and students of history to seriously consider some of the conceptual and methodological challenges facing the field of historical enquiry as we enter the twenty-first century. Including international contributors from a variety of disciplines - History, English, Information Studies and Archivists – this book does not seek either to applaud or condemn digital technologies, but takes a more conceptual view of how the field of history is being changed by the digital age. Essential reading for all historians.

Don't Click on the Blue E! Scott Granneman,2005-04-25 For anyone who has grown disenchanted with Microsoft's Internet Explorer web browser, 'Don't Click on the Blue E!' offers help. It gives non-technical users a convenient roadmap for switching to a better web browser -- Firefox. Covering the switch to Firefox, this is a helpful how-to guide.

Using ICT in History David Gardner,1998 Covering the main areas of ICT that history teachers encounter, from Internet to DTP and creating and using spreadsheets, this book provides a

matrix for teaching opportunities at Key Stage 3 and 4 / GCSE. It combines practical evaluation, advice and instruction, and includes a large selection of activity worksheets and exemplar sheets for specific applications that teachers can adapt and use in their own teaching.

The Computable City Michael Batty,2024-03-26 How computers simulate cities and how they are also being embedded in cities, changing our behavior and the way in which cities evolve. At every stage in the history of computers and communications, it is safe to say we have been unable to predict what happens next. When computers first appeared nearly seventy-five years ago, primitive computer models were used to help understand and plan cities, but as computers became faster, smaller, more powerful, and ever more ubiquitous, cities themselves began to embrace them. As a result, the smart city emerged. In The Computable City, Michael Batty investigates the circularity of this peculiar evolution: how computers and communications changed the very nature of our city models, which, in turn, are used to simulate systems composed of those same computers. Batty first charts the origins of computers and examines how our computational urban models have developed and how they have been enriched by computer graphics. He then explores the sequence of digital revolutions and how they are converging, focusing on continual changes in new technologies, as well as the twenty-first-century surge in social media, platform economies, and the planning of the smart city. He concludes by revisiting the digital transformation as it continues to confound us, with the understanding that the city, now a high-frequency twenty-four-hour version of itself, changes our understanding of what is possible.

The Family History Web Directory Jonathan Scott,2015-10-30 Jonathan Scott's Family History Web Directory is an information-packed reference guide that distils the best of the internet into one easy-to-use format. Themed sections cover different topics, from 'getting started' to specific occupations, and there is an index reproducing all the websites in A-Z order. His handbook is a vital source for less experienced researchers, and a handy aide-memoire for more seasoned campaigners. Web addresses are listed by topic, then in order of importance and usefulness. An extraordinary range of sites that will interest family historians is included from records of births and deaths, tax, crime and religion, to military records and records of work and occupations. Also featured are sites that give information about archives, blogs and forums, social networking and sharing research.The internet can be an overwhelming place for the genealogist. Jonathan Scott's book provides readers with online shortcuts, tips for getting the best from well-known websites, plus the details of all kinds of lesser-known and hard-to-find sources.
