How to Write a Successful Research Grant Application Willo Pequegnat, Ellen Stover, Cheryl Anne Boyce,2010-11-02 Over the last fifty years behavioral and medical research has been generously supported by the federal government, private foundations, and other philanthropic organizations contributing to the development of a vibrant public health system both in the United States and worldwide. However, these funds are dwindling and to stay competitive, investigators must understand the funding environment and know how to translate their hypotheses into research grant applications that reviewers evaluate as having scientific merit. The Second Edition of 'How to Write a Successful Research Grant Application' is the only book of its kind written by federal research investigators which provides technical assistance for researchers applying for biobehavioral and psychosocial research funding and can give them an edge in this competitive environment. The book provides invaluable tips on all aspects of the art of grantsmanship, including: how to determine research opportunities and priorities, how to develop the different elements of an application, how to negotiate the electronic submission and review processes, and how to disseminate the findings. Charts, visual aids, Web links, an extensive real-world example of a research proposal with budget, and a So You Were Awarded Your Grant—Now What? chapter show prospective applicants how to: - Formulate a testworthy—and interesting—hypothesis. - Select the appropriate research mechanism. - Avoid common pitfalls in proposal writing. - Develop an adequate control group. - Conduct a rigorous qualitative inquiry. - Develop a budget justification of costs. - Develop a human subjects of animal welfare plan. - Write a data analytic plan. - Design a quality control/assurance program. - Read between the lines of a summary of the review of your application. Although its focus is on Public Health Service funding, 'How to Write a Successful Research Grant' is equally useful for all research proposals, including graduate students preparing a thesis or dissertation proposal. Service providers in community-based organizations and public health agencies will also find this a useful resource in preparing a proposal to compete for grant funds from state and community resources, non-government organizations, and foundations.

Making Beautiful Deep-Sky Images Greg Parker,2007-09-20 This book is based around the author's beautiful and

sometimes awe-inspiring color images and mosaics of deep-sky objects. The book describes how similar Hubble class images can be created by amateur astronomers in their back garden using commercially available telescopes and CCD cameras. Subsequent processing and image enhancement in the electronic darkroom is covered in detail as well. A range of telescopes and equipment is considered, from the author's 11-inch with Hyperstar camera, down to more affordable instruments. Appendices provide links to free software – not available from a single source – and are themselves an invaluable resource.

Finding Funding Ernest W. Brewer, 2001-01-24 The materials collected, developed, and compiled in this volume are mostly related to grant-proposal development for education, but the push for uniformity in grants among the various federal agencies means that the materials have wider application. Some of the ideas and tips may be of general interest and value to a grantwriter; some ideas about project management should benefit anyone operating a project. The book is divided into three major parts and several additional supporting sections: Part I discusses the planning and some of the major tools of the trade needed to get started in the grant/project field and to use the Internet to access funding resources. Part II covers some important steps in developing a successful grant application. Part III discusses both closing out a project annually and the often difficult but realistic element of terminating the project at the end of external support. This handbook includes problem definition, analysis of need, goals and objectives, activities, some management details (timelines, personnel, budget, reports) evaluation, and dissemination of results. The work is about exploring, writing, implementing, and terminating an idea as a strong proposal and as an operating project. Appendixes include list abbreviations, state points of contact, and a glossary. (Contains 51 references.) (DFR)

People, Nations and Traditions in a Comparative Frame DMaris Coffman, Harold James, Nicholas Di Liberto, 2021-03-10 If the turn of the twenty-first century was characterised by the 'history wars' in which bitter internecine battles raged between different historical schools, Jonathan Steinberg was noteworthy for his methodological pluralism. His own historical work spanned diplomatic history, military history, the social history of war, biography, social history, banking history, political culture and genocide studies. He often employed a comparative historical approach, which teased out deep historical explanations by examining personalities, nations and traditions simultaneously. This book offers a critical appreciation of his contribution to modern historical practice with contributions by former students and colleagues, whose own interests are as diverse as those of Steinberg himself.

Evaluating Participatory Mapping Software Charla M. Burnett, 2023-04-21 This volume provides a framework for evaluating geospatial software for participatory mapping. The evaluation is based on ten key indicators: ethics, cost, technical level, inclusiveness, data accuracy, data privacy, analytical capacity, visualization capacity, openness, and accessibility (i.e., mobile friendly or offline capabilities). Each application is evaluated by a user and cross analyzed with specific case studies of the software's real-world application. This framework does not discriminate against assessing volunteered geographic information (VGI) applications, as a form of participatory mapping, in circumstances that its application is spearheaded by underrepresented groups with the intent to empower and spark political or behavioral change within formal and informal institutions. Each chapter follows a strict template to ensure that the information within the volume can be updated periodically to match the ever-changing technological environment. The book covers ten different mapping applications with the goal of creating a comparative evaluation framework that can be easily interpreted by convening institutions and novice users. This will also help identify gaps in software for participatory mapping which will help to inform application development in the future and updates to current geospatial software.

Psychotherapy for Families after Brain Injury Pamela S. Klonoff, 2014-04-18 Whether caused by illness, accident, or incident, brain injury requires multi-tiered resources for the patient and considerable external care and support. When recovery is sidelined by depression, anger, grief, or turmoil, family members and the support network have critical roles to play and need their own guidance and compassionate therapeutic interventions. Psychotherapy for Families after Brain Injury offers theoretical frameworks and eclectic techniques for working effectively with adult patients and their families at the initial, active and post-treatment phases of rehabilitation. This practical reference clarifies roles and relationships of the support network in interfacing with the loved one and addresses the understandably devastating and sometimes derailing emotions and psychosocial adversities. The content promotes psychoeducation and guided exercises, delineates "helpful hints" and coping tools and proffers multimedia resources to overcome hurdles. Constructs of awareness, acceptance and realism for all parties are woven throughout, along with ideas to enhance the support network's commitment, adjustment, positivity, hope and longevity. Case excerpts, instructive quotes from caregivers and nuggets of clinical advice assist in analyzing these and other topics in salient detail: The impact of brain injury on different family members. Treatment themes in early family sessions. Family therapy for moderate to severe brain injury, concussion and postconcussion syndrome. Family therapy after organic brain injury: stroke, anoxia, tumor, seizure disorders. Family group treatment during active rehabilitation. End-of-life and existential considerations and positive aspects of care giving. Aftercare group therapy for long-term needs. The hands-on approach demonstrated in Psychotherapy for Families after Brain Injury will enhance the demanding work of a range of professionals,

including neuropsychologists, clinical psychologists, rehabilitation psychologists, family therapists, marriage and family counselors, psychiatrists, behavioral/mental health counselors, clinical social workers, rehabilitation specialists such as speech-language pathologists, physical and occupational therapists, and graduate students in the helping professions.
