The Basics of Media Writing Scott A. Kuehn,Andrew Lingwall,2016-12-08 The Basics of Media Writing: A Strategic Approach helps readers develop the essential writing skills and professional habits needed to succeed in 21st-century media careers. This research-driven, strategy-based media writing textbook digs deeply into how media professionals think and write in journalism, public relations, advertising, and other forms of strategic communication. Authors Scott A. Kuehn and Andrew Lingwall have created two comprehensive writing models to help students overcome their problems in finding and developing story topics by giving them starting points to begin writing. The Professional Strategy Triangle model shows students how to think critically about the audience, the situation, and the message before starting a news story or persuasive piece and the FAJA four-point model asks students a series of questions about their story type (Fact, Analysis, Judgment, or Action) to guide them to the right angle or organizational structure for their message. Rooted in classical rhetorical methods, this step-by-step technique enables readers to strategically approach each writing task, no matter the format.

Women Leading Justice Elaine Gunnison,Jacqueline B. Helfgott,2018-11-02 The women's movement and increasing social consciousness regarding gender disparity and discrimination has helped to make gains over the past several decades to reduce gender disparity for women in the workplace. However, gender discrimination and disparity continue to exist. Women continue to receive lower wages, and fewer opportunities for promotion and professional

advancement — and this is particularly true in male dominated professions such as criminal justice. Building on original qualitative data, this book explores the experiences of female criminal justice professionals who have risen to the top of their professional ladders. The book includes first-hand narrative accounts of high ranking successful professional women working across a range of fields such as policing, courts, corrections, victim and restorative justice services and criminal justice research agencies in the United States and Canada. This book highlights the barriers that successful female criminal justice professionals have to overcome to obtain their positions, and identifies key themes that these women see as having allowed them to break through those barriers and to navigate their professional environments. This book provides students interested in entering the criminal justice field — and working professionals already in the field — with knowledge about women who have risen through the ranks and up the professional ladder to break through the glass and the brass ceilings of their profession.

The Autoimmune Wellness Handbook Mickey Trescott,Angie Alt,2016-11-01 The way autoimmune disease is viewed and treated is undergoing a major change as an estimated 50 million Americans (and growing) suffer from these conditions. For many patients, the key to true wellness is in holistic treatment, although they might not know how to begin their journey to total recovery. The Autoimmune Wellness Handbook, from Mickey Trescott and Angie Alt of Autoimmune-Paleo.com, is a comprehensive guide to living healthfully with autoimmune disease. While conventional medicine is limited to medication or even surgical fixes, Trescott and Alt introduce a complementary solution that focuses on seven key steps to recovery: inform, collaborate, nourish, rest, breathe, move, and connect. Each step demystifies the process to reclaim total mind and body health. With five autoimmune conditions between them, Trescott and Alt have achieved astounding results using the premises laid out in the book. The Autoimmune Wellness Handbook goes well beyond nutrition and provides the missing link so that you can get back to living a vibrant, healthy life.

Computer Simulations of Space Societies William Sims Bainbridge,2018-06-09 At the intersection of astronautics, computer science, and social science, this book introduces the challenges and insights associated with computer simulation of human society in outer space, and of the dynamics of terrestrial enthusiasm for space exploration. Never before have so many dynamic representations of space-related social systems existed, some deeply analyzing the logical implications of social-scientific theories, and others open for experience by the general public as computer-generated virtual worlds. Fascinating software ranges from multi-agent artificial intelligence models of civilization, to space-oriented massively multiplayer online games, to educational programs suitable for schools or even for the world's space exploration agencies. At the present time, when actual forays by humans into space are scarce, computer simulations of space societies are an excellent way to prepare for a renaissance of exploration beyond the bounds of Earth.
