What Matters Most Leonard Sweet,2012-03-13 Belief can exist in isolation, but faith requires a relationship Why wade in the shallows of belief when you can plunge into the depths of faith? Belief involves a different way of thinking, but faith brings about a new way of living. It grows through direct experience and a close relationship, both of which come as you follow Jesus. As Christians we often talk about developing a "personal relationship" with Christ, but instead of pursuing a relationship, we pursue knowledge. We are tempted to place confidence in our definite, settled beliefs, which offer a pale substitute for the daily adventure of an honest relationship with Jesus. In What Matters Most, Leonard Sweet presents a challenging and compelling approach to belief that is joined by dynamic engagement with God. You are invited to explore the uncharted regions of faith by following Jesus, completely on his terms. Once you begin, you will never go back to mere belief.

Efficient Learning Machines Mariette Awad,Rahul Khanna,2015-04-27 Machine learning techniques provide cost-effective alternatives to traditional methods for extracting underlying relationships between information and data and for predicting future events by processing existing information to train models. Efficient Learning Machines explores the major topics of machine learning, including knowledge discovery, classifications, genetic algorithms, neural networking, kernel methods, and biologically-inspired techniques. Mariette Awad and Rahul Khanna's synthetic approach weaves together the theoretical exposition, design principles, and practical applications of efficient machine learning. Their experiential emphasis, expressed in their close analysis of sample algorithms throughout the book, aims to equip engineers, students of engineering, and system designers to design and create new and more efficient machine learning systems. Readers of Efficient Learning Machines will learn how to recognize and analyze the problems that machine learning technology can solve for them, how to implement and deploy standard solutions to sample problems, and how to design new systems and solutions. Advances in computing performance, storage, memory, unstructured information retrieval, and cloud computing have coevolved with a new generation of machine learning paradigms and big data analytics, which the authors present in the conceptual context of their traditional precursors. Awad and Khanna explore current developments in the deep learning techniques of deep neural networks, hierarchical temporal memory, and cortical algorithms. Nature suggests sophisticated learning techniques that deploy simple rules to generate highly intelligent and organized behaviors with adaptive, evolutionary, and distributed properties. The authors examine the most popular biologically-inspired algorithms, together with a sample application to distributed datacenter management. They also discuss machine learning techniques for addressing problems of multi-objective optimization in which solutions in real-world systems are constrained and evaluated based on how well they perform with respect to multiple objectives in aggregate. Two chapters on support vector machines and their extensions focus on recent improvements to the classification and regression techniques at the core of machine learning.

Ontologies for Knowledge modeling in construction planning Vito Getuli,2022-10-14 Nowadays, there is an increasing recognition of the value of knowledge management in the construction projects and ontology-based semantic modelling is seen as an important means of addressing this problem, even if a knowledge-base which maps the construction planning and scheduling domains, in a formal and machine-readable way, is still missing. Addressing this issue, the book is divided in two parts. Part I, theory, is a theoretical introduction of on ontologies concepts and expert systems. Part II, application, presents a research of ontologies development for semantic modelling of construction scheduling, workspace, product and time domains. The last chapter presents the architecture of an ontology-based expert system, to show how ontologies can support automated planning mechanisms.

The Rise of Early Rome Francesca Fulminante,2023-05-31 The trajectory of Rome from a small village in Latium vetus, to an emerging power in Italy during the first millennium BC, and finally, the heart of an Empire that sprawled throughout the Mediterranean and much of Europe until the 5th century CE, is well known. Its rise is often presented as inevitable and unstoppable. Yet the factors that contributed to Rome's rise to power are not well understood. Why Rome and not Veii? In this book, Francesca Fulminante offers a fresh approach to this question through the use of a range of methods. Adopting quantitative analyses and a novel network perspective, she focuses on transportation systems in Etruria and Latium Italy from ca. 1000–500 BC. Fulminante reveals the multiple factors that contributed to the emergence and dominance of Rome within these regional networks, and the critical role they in the rise of the city and, ultimately, Roman imperialism.
