Transport Revolutions Richard Gilbert,Anthony Pearl,2012-05-16 Transport Revolutions: Moving People and Freight without Oil sets out the challenges to our growing dependence on transport fuelled by low-priced oil. These challenges include an early peak in world oil production and profound climate change resulting in part from oil use. It proposes responses to ensure effective, secure movement of people and goods in ways that make the best use of renewable sources of energy while minimizing environmental impacts. Transport Revolutions synthesizes engineering, economics, environment, organization, policy and technology, and draws extensively on current data to present important conclusions. The authors argue that land transport in the first half of the 21st century will feature at least two revolutions. One will involve the use of electric drives rather than internal combustion engines. Another will involve powering many of these drives directly from the electric grid - as trains and trolley buses are powered today - rather than from on-board fuel. They go on to discuss marine transport, whose future is less clear, and aviation, which could see the most dramatic breaks from current practice. With its expert analysis of the politics and business of transport, Transport Revolutions is essential reading for professionals and students in transport, energy, town planning and public policy.

Facebook Nation Newton Lee,2014-10-16 Facebook's psychological experiments and Edward Snowden's NSA leaks epitomize a world of increasing information awareness in the social media ecosystem. With over a billion monthly active users, Facebook as a nation is overtaking China as the largest country in the world. President Barack Obama, in his 2011 State of the Union Address, called America "the nation of Edison and the Wright brothers" and "of Google and Facebook." U.S. Chief Information Officer Steven VanRoekel opines that America has become a "Facebook nation" that demands increased transparency and interactivity from the federal government. Ubiquitous social networks such as Facebook, Google+, Twitter, and YouTube are creating the technologies, infrastructures, and big data necessary for Total Information Awareness - a controversial surveillance program proposed by DARPA after the 9/11 attacks. NSA's secret PRISM program has reinvigorated WikiLeaks founder Julian Assange's accusation that "Facebook is the most appalling spying machine that has ever been invented." Facebook CEO Mark Zuckerberg once said, "We exist at the intersection of technology and social issues." This book offers discourse and practical advice on the privacy issue in the age of big data, business intelligence in social media, e-government and e-activism, as well as personal total information awareness. This expanded edition also includes insights from Wikipedian Emily Temple-Wood and Facebook ROI experts Dennis Yu and Alex Houg.

Flying in the Face of Criminalization Sofia Michaelides-Mateou,Andreas Mateou,2016-04-15 Two parallel investigations take place after every aviation accident: one technical, one judicial. The former must be conducted with the sole intention of making safety recommendations to prevent the recurrence of similar accidents. The judicial investigation, however, has the intention of identifying those parties that have been at fault and to apportion blameworthiness for criminal and civil liability. Consequently, this results in a predicament for those parties that have been identified as having played a role in the accident, a dilemma between not supplying information aimed at enhancing safety and preventing future accidents and, on the other hand, supplying such information which may possibly be used against them in subsequent criminal prosecution. The situation is compounded by inconsistent approaches between different legal systems; aviation professionals may find themselves faced with criminal charges in one country but not in another, and they may also be unsure as to whether statements given during the technical investigation could be used against them in a court of law. Aviation safety is, to a large extent, built upon the trust placed by pilots, ATCOs and other aviation professionals in the process of accident investigation. This book examines the growing trend to criminalize these same people following an accident investigation and considers the implications this has for aviation safety.
