Author Matthew MacDonald teaches you the fundamentals of creating, maintaining, and updating an effective, attractive, and visitor-friendly web site--from scratch or from an existing site that's a little too simple or flat for your liking. Creating Web Sites: The Missing Manual doesn't only cover how to create a well-designed, appealing, smart web site that is thoroughly up to date and brimming with the latest features. It also covers why it's worth the effort by explaining the rationale for creating a site in the first place and discussing what makes a given web site particularly aesthetic, dynamic, and powerful. It further helps you determine your needs and goals and make well informed design and content decisions. Creating Web Sites: The Missing Manual includes a basic primer on HTML, working with JavaScript, and incorporating services like Paypal's shopping cart, Amazon's associate program, and Google AdSense and AdWords. It delivers advanced tricks for formatting, graphics, audio and video, as well as Flash animation and dynamic content. And you'll learn how to identify and connect with your site's audience through forms, forums, meta tags, and search engines. This isn't just another dry, uninspired book on how to create a web site. Creating Web Sites: The Missing Manual is a witty and intelligent guide for all of you who are ready to make your ideas and vision a web reality.

Fundamentals of Plan Making Edward J. Jepson, Jr.,Jerry Weitz,2015-12-07 Urban and regional planning programs aspire to prepare practitioners to write and implement plans, primarily at the local level of government. These programs are very much professional in their aspirations, as opposed to research oriented. Yet, academic planning programs often place greater emphasis on theory than practice. For decades, the planning academy has acknowledged a major disconnect between what the planning academy teaches students and the techniques and skills needed to be a successful professional practitioner. Fundamentals of Plan Making will give planning students an understanding of research design as it applies to planning, develop familiarity with various data sources, and help them acquire knowledge and the ability to conduct basic planning analyses such as population projections, housing needs assessments, development impact analyses, and land use plans. Students will also learn how to implement the various citizen participation methods used by planners and develop an appreciation of the values and roles of practicing planners. In Fundamentals of Plan Making, Edward Jepson and Jerry Weitz bring their extensive experience as practicing academics and give planning students the practical, hands on tools they need to implement the various methods used to create and implement real plans and policies. Its chapters on transportation, housing, environment, economic development and other core development topics also make it a handy reference for planning practitioners.

I (Mark) work as a database consultant, teach database theory and practice at two Universities and have written the UK Personal ComputerWorld's database column for more than ten years. We met (at a database conference, not unreasonably, given our interests) in the summer before Access 1. 0 was launched and found that we shared similar views on how databases should be designed and built. Since then we have writtenabooktogetherabouttherelationalmodelthatunderliesAccessandall other relational database systems (see below for the inevitable plug).
