Television Alexander B. Magoun, 2007-06-30 For better or worse, television has been the dominant medium of communication for 50 years. Almost all American households have a television set; many have more than one. Transmitting images and sounds electronically is a relatively recent invention, one that required passionate inventors, determined businessmen, government regulators, and willing consumers. This volume in the Greenwood Technographies series covers the entire history of television from 19th-century European conceptions of transmitting moving images electrically to the death of TV as a discrete system in a digital age. Magoun also discusses the changing face of television in the displays that people watch around the globe. *Television: The Life Story of a Technology* appeals to students and lay readers alike in highlighting key events and people: the American engineers and entrepreneurs such as Vladimir Zworykin and David Sarnoff who ignited the television industry; the bloom of programming choices in tandem with the Baby Boom generation; the development of cable and satellite TV; the Asians who innovated American inventions in

videorecording and flat-panel displays; the use of TV in wartime; and the new worlds of digital and high-definition television. Based on the latest research, this crisply written, sometimes provocative survey includes a glossary, timeline, and bibliography for further information.

The book's chapters begin with introductions of leading companies with significant e-commerce expertise and at least two small case studies. They include 10 or more hands-on exercises, encouraging readers to explore and analyze sites, and a list of key terms and bibliographic citations. They conclude with 25-30 review questions and 6-10 projects for further investigation. Offers a generalist's overview of the field and its major players for people with little or no technical background Every chapter starts with an industry profile and two information boxes, which serve as case studies and point to practical applications Projects and hands-on exercises conclude each chapter

The Second World War and the 'Other British Isles' Daniel Travers, 2018-06-28 What is often held to be Britain's 'finest hour' - the Second World War - was not experienced so uniformly

across the British Isles. On the margins, the war was endured in profoundly different ways. While D-Day or Dunkirk is embedded in British collective memory, how many Britons can recall that Finns were interned on the Isle of Man, that enemy soldiers developed British infrastructure in Orkney, or that British subjects were sent to concentration camps from Guernsey? Such experiences, tangential to the dominant British war narrative, are commemorated elsewhere in the 'other British Isles'. In this remarkable contribution to British Island Studies, Daniel Travers pursues these histories and their commemoration across numerous local sites of memory: museums, heritage sites and public spaces. He examines the way these island identities assert their own distinctiveness over the British wartime story, and ultimately the way they fit into the ongoing discourse about how the memory of the Second World War has been constructed since 1945.

Organic Electroluminescence Zakya H. Kafafi, 2018-10-03

Organic light-emitting diode(OLED) technology has achieved significant penetration in the commercial market for small, low-voltage and inexpensive displays. Present and future novel technologies based on OLEDs involve rigid and flexible flat panel displays, solid-state lighting, and lasers. Display applications may range from hand-held devices to large flat panel screens that can be rolled up or hung flat on a wall or a ceiling. Organic Electroluminescence gives an overview of the on-going research in the field of organic light-emitting materials and devices, covering the principles of electroluminescence in organic thin films, as well as recent trends, current applications, and future potential uses. The book begins by giving a background of organic electroluminescence in terms of history and basic principles. It offers details on the mechanism(s) of electroluminescence in thin organic films. It presents in-depth discussions of the parameters that control the external electroluminescence quantum efficiency including the photoluminescence quantum yield, the light-output

coupling factor, carrier/charge injection and transport, and electron and hole recombination processes in organic semiconductors. The authors address the design and the characterization of amorphous charge transport materials with high glass transition temperatures, light-emitting small molecules and conjugated polymers. The book covers state-of-the-art concepts and technologies such as fluorescent and phosphorescent OLEDs, various approaches for patterning organics, and active matrix organic emissive displays including their back panel thin film transistors and pixel electronics. It concludes by summarizing future directions for OLEDs in organic light-emitting displays, large area distributed solid state light sources, and lasers using organic thin films, nanostructures, and photonic crystals. Organic Electroluminescence is an excellent resource and reference for stu

Glazed America Paul R. Mullins,2008-09-07 Everybody loves a good doughnut. The magic combination of soft dough, hot oil, and sugar coating--with or without sprinkles--inspires a wide range of surprisingly powerful memories and cravings. Yet we are embarrassed by our desire; the favorite food of Homer Simpson, caricatured as the dietary cornerstone of cops, a symbol of our collective descent into obesity, doughnuts are, in the words of one California consumer, a food of shame. Paul Mullins turns his attention to the simple doughnut in order to learn more about North American culture and society. Both a breakfast staple and a snack to eat any time of day or night, doughnuts cross lines of gender, class, and race like no other food item. Favorite doughnut shops that were once neighborhood institutions remain unchanged--even as their surrounding neighborhoods have morphed into strip clubs, empty lots, and abandoned housing. Blending solid scholarship with humorous insights, Mullins offers a

look into doughnut production, marketing, and consumption. He confronts head-on the question of why we often paint doughnuts in moral terms, and shows how the seemingly simple food reveals deep and complex social conflicts over body image and class structure. In Mullins's skillful hands, this simple pastry provides surprisingly compelling insights into our eating habits, our identity, and modern consumer culture.

Videogame Graphics, BigData & Analytics Eamonn Killian, 2013-12-17 ABSTRACT The purpose of this coffee shop read is to attempt to highlight the criticality of videogames as a component of the "Convergence" of some amazing technologies

(in particular: Cloud, Gaming/MMOG, Gamification and BigData) that is clear to many inside the IT world. I am not a deep technical “guru” I am a businessman that seeks to understand these technologies in order to find a mean by which they can be leveraged ultimately for commercial gain. This short book is the output from my investigation of videogames and Massively Multi-user Online Games (MMOG) and is written in as much a chronological order as could be achieved to try to take other business, non-IT, and non-programming literate readers on the journey I took which resulted in a deepening of my understanding of why the once humble graphics processing capabilities have become part of the bedrock for our future exploitation of computer processing as a whole. In doing so it is hoped this short book has answered some seemingly simple questions during the journey, namely: Why GPU’s were developed? Why triangles are so important to graphics processing? Why high degrees of parallelism are becoming increasingly important? How GPU’s are being utilized to deliver significant gains in industries and market sectors far beyond the original design criteria for the GPU? and Why GPU’s cannot wholly replace CPU’s and that the future is most likely a symbiosis of the two capabilities leveraging each for their inherent strengths? For much more on the Convergence of these technologies please review my website: www.eamonkillian.com
