Resident Duty Hours Institute of Medicine, Committee on Optimizing Graduate Medical Trainee (Resident) Hours and Work Schedules to Improve Patient Safety, 2009-04-27 Medical residents in hospitals are often required to be on duty for long hours. In 2003 the organization overseeing graduate medical education adopted common program requirements to restrict resident workweeks, including limits to an average of 80 hours over 4 weeks and the longest consecutive period of work to 30 hours in order to protect patients and residents from unsafe conditions resulting from excessive fatigue. Resident Duty Hours provides a timely examination of how those requirements were implemented and their impact on safety, education, and the training institutions. An in-depth review of the evidence on sleep and human performance indicated a need to increase opportunities for sleep during residency training to prevent acute and chronic sleep deprivation and minimize the risk of fatigue-related errors. In addition to recommending opportunities for on-duty sleep during long duty periods and breaks for sleep of appropriate lengths between work periods, the committee also recommends enhancements of supervision, appropriate workload, and changes in the work environment to improve conditions for safety and learning. All residents, medical educators, those involved with academic training institutions, specialty societies, professional groups, and consumer/patient safety organizations will find this book useful to advocate for an improved culture of safety.

Aristotle's On the Soul Aristotle, 2001 In this timeless and profound inquiry, Aristotle presents a view of the psyche that avoids the simplifications both of the materialists and those who believe in the soul as something quite distinct from body. On the Soul also includes Aristotle's idiosyncratic and influential account of light and colors. On Memory and Recollection continues the investigation of some of the topics

introduced in *On the Soul*. Sachs's fresh and jargon-free approach to the translation of Aristotle, his lively and insightful introduction, and his notes and glossaries, all bring out the continuing relevance of Aristotle's thought to biological and philosophical questions.

Onomastics of the "Chanson de Roland" Gustav A. Beckmann, 2023-03-20 This ambitious study of all proper names in the *Chanson de Roland* is based for the first time on a systematic survey of the whole geographical and historical literature from antiquity to after 1100 for the Geographica, and on working through (almost) the entire documentary tradition of France and its neighbouring regions from 778 to the early 12th century for the personal names. The overall result is clear: the surviving song is more tightly and profoundly structured, even in smaller scenes, than generally assumed, it is also richer in depicting reality, and it has a very long prehistory, which can be traced in outline, albeit with decreasing certainty, (almost) back to the Frankish defeat of 778. Here are some individual results: for the first time, a detailed (and ultimately simple!) explanation not only of the 'pagan' catalogue of peoples, but also of the overarching structure of Baligant's empire, the organisation of North Africa, the corpus of the Twelve Anti-Pairs as well as the 'pagan' gods are given, and individual names such as Bramimunde and Jurfaret, toponyms such as Marbrise and Marbrose are explained. From Roland's Spanish conquests (v. 196–200), the course of the elapsed set *anz toz plains* is reconstructed. Even the names of the weapons prove to be a small structured group, in that they are very discreetly adapted to their respective 'pagan' or Christian owner. On the Christian side, the small list of relics in Roland's sword is also carefully devised, not least in what is left out: a relic of the Lord; this is reserved for Charlemagne's Joiuse. The author explains for example, why from the archangel triad only Michael and Gabriel descend to the dying Roland, whereas 'the' angel Cherubin descends in Rafael's place. Munjoie requires extensive discussion, because here a (hitherto insufficiently recorded) toponym has been secondarily charged by the poet with traditional theological associations. The term *Ter(e) major* is attested for the first time in reality, namely in the late 11th century in Norman usage. For the core of France, the fourth cornerstone – along with Besançon, Wissant and Mont-Saint-Michel – is Xanten, and its centre is Aachen. The poet's artful equilibration of Charles's ten *eschieles* and their leaders is traced. The Capetian barrier emerges as a basic fact of epic geography. Approximatively, the last quarter of the study is devoted to the prehistory of the song, going backwards in time: still quite clearly visible is an Angevin Song of Roland from around 1050, in which Marsilie, Olivier, Roland, Ganelon, Turpin and Naimés already have roles similar to those in the preserved Song. Behind it, between about 970 and shortly

after 1000, is the Girart de Vienne from the Middle Rhône, already recognised by Aebischer, with the newly invented Olivier contra Roland. Finally, in faint outlines, an oldest attainable, also Middle Rhône adaptation of the Roland material from shortly after 870 emerges. For the Chanson de Roland, Gaston Paris and Joseph Bédier were thus each right on the main point that was close to their hearts: the surviving song has both the thoroughly sophisticated structure of great art that Bédier recognised in it, and the imposingly long prehistory that Paris conjectured.

Asset Pricing John H. Cochrane, 2009-04-11 Winner of the prestigious Paul A. Samuelson Award for scholarly writing on lifelong financial security, John Cochrane's *Asset Pricing* now appears in a revised edition that unifies and brings the science of asset pricing up to date for advanced students and professionals. Cochrane traces the pricing of all assets back to a single idea--price equals expected discounted payoff--that captures the macro-economic risks underlying each security's value. By using a single, stochastic discount factor rather than a separate set of tricks for each asset class, Cochrane builds a unified account of modern asset pricing. He presents applications to stocks, bonds, and options. Each model--consumption based, CAPM, multifactor, term structure, and option pricing--is derived as a different specification of the discounted factor. The discount factor framework also leads to a state-space geometry for mean-variance frontiers and asset pricing models. It puts payoffs in different states of nature on the axes rather than mean and variance of return, leading to a new and conveniently linear geometrical representation of asset pricing ideas. Cochrane approaches empirical work with the Generalized Method of Moments, which studies sample average prices and discounted payoffs to determine whether price does equal expected discounted payoff. He translates between the discount factor, GMM, and state-space language and the beta, mean-variance, and regression language common in empirical work and earlier theory. The book also includes a review of recent empirical work on return predictability, value and other puzzles in the cross section, and equity premium puzzles and their resolution. Written to be a summary for academics and professionals as well as a textbook, this book condenses and advances recent scholarship in financial economics.

Commentary on Metaphysics: Books 7-12 Saint Thomas (Aquinas), John Patrick Rowan, 2019

Foundational in its consideration of being and the transcendentals, the *Metaphysics* of Aristotle is a dense and difficult work on its own. This volume contains the first half of St. Thomas's commentary on the *Metaphysics*, beginning with discussing the views of Aristotle's predecessors and moving towards a discussion of being--

Unraveling the Exposome Sonia Dagnino, Anthony Macherone, 2018-10-08 This volume presents a comprehensive overview of the science and application of the Exposome through seventeen chapters from leaders in the field. At just over ten years since the term was coined by Christopher Wild in 2005, this is the first, field-defining volume to offer a holistic picture of the important and growing field of Exposomics. The term "Exposome" describes the sum of all exposures (not only chemical) that an individual can receive over a lifetime from both exogenous sources (environmental contaminants, food, lifestyle, drugs, air, etc.) and endogenous sources (metabolism, oxidative stress, lipid peroxidation, chemicals synthesized by the microbiome, etc.). The first section of this book contains chapters that discuss how the Exposome is defined and how the concept fits into the fields of public health and epidemiology. The second section provides an overview of techniques and methods to measure the human Exposome. The third section contains methods and applications for measuring the Exposome through external exposures. Section four provides an

overview on statistical and computational techniques- including big data analysis - for characterizing the Exposome. Section five presents a global collection of case studies

The overall costs are staggering in terms of annual incidence and costs associated with treatment and survival, yet despite their significance as public health issues, there are few drugs and devices available for definitive treatment. The book focuses on novel therapies and the unique challenges their intended targets pose for the design and analysis of clinical trials. This volume provides neurologists, neuroscientists, and drug developers with a more complete understanding of the scientific and medical issues of relevance in designing and initiating clinical development plans for novel drugs intended for acute neuroscience populations. The editors provide the best understanding of the pitfalls associated with acute CNS drug development and the best information on how to approach and solve issues that have plagued drug development. Presents a comprehensive overview on clinical trials and drug development challenges in acute neuroscience populations Provides neurologists, neuroscientists and drug developers with a complete understanding of scientific and medical issues related to designing clinical trials Edited by leaders in the field who have designed and managed over 50 neuroemergency clinical trials
