**Using Performance Information to Facilitate Decisionmaking in Transportation Logistics** James Shuler,2009-09-08 This book assesses whether, and to what extent, senior logistics executives use performance information when making logistics-related decisions. The research examines the performance management and measurement systems and processes within three major government organizations; determines what conditions, if any, affect logistics processes and how the organizations measure them; and explores whether senior officials use this information in their decisionmaking. Case studies were conducted on the United States Department of Defense (DOD), the United States Postal Service (USPS), and the United States Department of Energy (DOE). Based on 12 critical practices that the United States General Accounting Office has identified for federal agencies to use in assessing compliance with the Government Performance and Results Act of 1993 (GPRA), 28 evaluation factors were used to assess the use of performance information at four logistical levels within each agency.

**Injury Research** Guohua Li,Susan P. Baker,2012-01-07 Injury is recognized as a major public health issue worldwide. In most countries, injury is the leading cause of death and disability for children and young adults age 1 to 39 years. Each year in the United States, injury claims about 170,000 lives and results in over 30 million emergency room visits and 2.5 million hospitalizations. Injury is medically defined as organ/tissue damages inflicted upon oneself or by an external agent either accidentally or deliberately. Injury encompasses the undesirable consequences of a wide array of events, such as motor vehicle crashes, poisoning, burns, falls, and drowning, medical error, adverse effects of drugs, suicide and homicide. The past two decades have witnessed a remarkable growth in injury research, both in scope and in depth. To address the tremendous health burden of injury morbidity and mortality at the global level, the World Health Organization in 2000 created the Department of Injury and Violence Prevention, which has produced several influential reports on violence, traffic injury, and childhood injury. The biennial World Conference on Injury Control and Safety Promotion attracts a large international audience and has been successfully convened nine times in different countries. In the United States, the National Center for Injury Prevention and Control became an independent program of the federal Centers for Disease Prevention and Control in 1997. Since then, each state health department has created an office in charge of injury prevention activities and over a dozen universities have established injury control research centers. This volume will fill an important gap in the scientific literature by providing a comprehensive and up-to-date reference resource to researchers, practitioners, and students working on different aspects of the injury problem and in different practice settings and academic fields.

**Building Power to Change the World** James Muldoon,2020-11-18 The German council movements arose through mass strikes and soldier mutinies towards the end of the First World War. They brought down the German monarchy, founded several short-lived council republics, and dramatically transformed European politics. Building Power to Change the World reconstructs how participants in the German council movements struggled for a democratic socialist society. It examines their attempts to democratize politics, the economy, and society through building powerful worker-led organisations and cultivating workers' political agency. Drawing from the practices of the council movements and the writings of theorists such as Rosa Luxemburg, Anton Pannekoek and Karl Kautsky, Building Power to Change the World returns to their radical vision of a self-determining society and their political program of democratization and socialization. It presents a powerful argument for renewed attention to the political theories of this historical period and for their ongoing relevance for democratic politics today.

**English - A Changing Medium for Education** Constant Leung,Brian V Street,2012-07-25 In this volume a range of authors from different international contexts argue that the notion of communicative competence in English, hitherto largely referenced to metropolitan native-speaker norms, has to be expanded to take account of diverse contexts of use for a variety of purposes. It also discusses the popular belief that language and literacy should simply be regarded as a technical 'skill' which confers universal benefits and that it should be replaced with a social practice view that recognises situated variations and diversity. This volume, we believe, provides a reference point for extended research and practice in these areas that will be of interest to wide range of people engaged in language and literacy education.

**North Korean Nuclear Operationality** Gregory J. Moore,2014 Leading Asian and security studies experts consider the question: What would happen if North Korea goes nuclear? and their answers are critical. Scholars and policymakers alike need to understand the implications not only for northeast Asian regional security, but also for the international nuclear non-proliferation regime. Moore's contributors evaluate political, economic, and security issues including: how South Korea, China, Japan, and Russia would react to such an event, and the possibility of a regional arms race; what diplomatic

and strategic options the U.S. has; and how the global community's expectations regarding nuclear non-proliferation would be effected. Given the instability and mystery surrounding North Korean politics, scholarship on the implications of the country's nuclear capability is critical, which makes this volume with its unique focus a timely addition to the East Asian security studies field--

**Corporate Power and Ownership in Contemporary Capitalism** Susanne Soederberg,2009-09-14 Despite the influence corporations wield over all aspects of everyday life, there has been a remarkable absence of critical inquiry into the social constitution of this power. In analysing the complex relationship between corporate power and the widespread phenomenon of share ownership, this book seeks to map and define the nature of resistance and domination in contemporary capitalism. Drawing on a Marxist-informed framework, this book reconnects the social constitution of corporate power and changing forms of shareholder activism. In contrast to other texts that deal with corporate governance, this study examines a diverse and comprehensive set of themes, from socially responsible investing to labour-led shareholder activism and its limitations. Through this ambitious and critical study, author Susanne Soederberg demonstrates how the corporate governance doctrine represents an inherent feature of neoliberal rule, effectively disembedding and depoliticising relations of domination and resistance from the wider power and paradoxes of capitalism. Examining corporate governance and shareholder activism in a number of different contexts that include the United States and the global South, this important book will be of interest to students and scholars of international political economy, international relations and development studies. It will also be of relevance to a wider range of disciplines including finance, economics, and business and management studies. Winner of the Davidson/Studies in Political Economy Award.

**The Cardamom Conundrum** Timothy J. Killeen,2012-02-01 A conundrum is a puzzle whose solution requires the resolution of a paradox. In this instance, the paradox lies in two widely held and conflicting assumptions: that the pathway to a modern economy requires exploiting and monetizing a country's natural resources, and that the long-term prosperity of a nation depends on the conservation of those same resources. This book consciously seeks to avoid the mentality of trade-offs, where pro-development advocates view conservation efforts as impediments and conservationists are convinced that development inevitably leads to a loss for nature. Instead, through an evaluation of opportunities in the still pristine forests of the Cardamom Mountains and surrounding landscapes, the author seeks to demonstrate that wise management of a nation's renewable natural resources will facilitate economic growth. Resolving the Cardamom Conundrum demands an economic model that provides robust growth, and that alleviates poverty over the short term and eradicates it over the medium term. Any other solution is impractical and morally unacceptable. The author points the way by indentifying innovative options linked to climate finance and low carbon development strategies that span the economic, social and environmental dimensions of sustainable development.

*Mobile Information Systems* Elaine Lawrence,Barbara Pernici,John Krogstie,2006-01-20 Mobility is perhaps the most important market and technological trend within information and communication technology. With the advent of new mobile infrastructures providing higher bandwidth and constant connection to the network from virtually everywhere, the way people use information resources is predicted to be radically transformed. Over the last years, a new breed of information systems, referred to as mCommerce systems or mobile information systems, has appeared to address this emerging situation. In 2000, the IFIP 8.1 WG decided to look into establishing a task group to look closer at this area, and the idea was adopted and extended by IFIP TC8 the following year. After the arrangement of several workshop, this task group has been the driving force behind the arrangement of MOBIS (IFIP TC 8 Working Conference on Mobile Information systems) held in Oslo, Norway, 15-17 September 2004. The objective of the working conference was to provide a forum for researchers and practitioners interested in planning, analysis, design, construction, modification, implementation, utilization, evaluation, and management of mobile information systems to meet, and exchange research ideas and results. Specifically, we tried to use the working conference to • Clarify differences and similarities between the development of mobile vs. more traditional information systems • Investigate organizational impact of mobile information systems • Investigate mobile commerce applications combined with the advantages of mobile communications technologies X Mobile Information Systems • Evaluate existing and newly developed approaches for analysis, design, implementation, and evolution of mobile information systems.

*Who Wins in a Digital World?* MIT Sloan Management Review,2019-03-19 How organizations can adapt to a constantly changing business environment by being flexible but focused, embracing change, and moving fast. In the new digital world, the unknowns are never-ending. Our ability to embrace the demands of change has become a prerequisite for success. It's not easy. We don't work the way we did last year. Next year, it will all change again. If an organization doesn't embrace the realities of change, it will be under siege from those that do. *Who Wins in a Digital World* explains how organizations can adapt to a constantly changing business environment by being flexible but focused, embracing change in all its messiness, and moving fast. In articles that originally appeared in MIT Sloan Management Review, experts from business and academia discuss digital adaptability, explaining how both organizations and individuals need the ability to excel in what their roles will become as technology and their competitive ecosystem evolve. They highlight strategies and mindsets that can foster change, including boldness in the face of digitization, a focus on collaboration, and an artificial intelligence game plan. And they explore the need for speed, with one contributor declaring: "Implement first, ask questions later (or not at all)." Once an organization accepts the fact that technological change is ongoing and inevitable, it becomes more about opportunity and less about challenge. This book shows that change can be stimulating, exhilarating, and something to be welcomed. Contributors Stephen J. Andriole, Jacques Bughin, Thomas H. Davenport, Nathan Furr, Lynn J.
