**An Approach to Assessing the Technical Feasibility and Market Potential of a New Automotive Device** Rand Zero Emission Fuel Saver Study Team, 2007 Save the World Air (STWA) has developed magnet-based devices, including its Zero Emission Fuel Saver (ZEFS), that it claims can improve vehicle fuel economy and reduce emissions. These devices are designed to be fitted as original equipment onto internal combustion engines or to be retrofitted onto existing engines. STWA asked the RAND Corporation to help develop a plan for assessing the technical basis required for successful commercialization of ZEFS. STWA also sought RAND's advice in examining potential market opportunities for ZEFS. This report summarizes RAND's analysis of these two issues, concluding the following. Application of magnetic fields has not been shown in the literature to lower the viscosity of automotive fuels. Along with empirical testing, establishing a theoretical basis underlying the effect of magnetic fields on fuel viscosity, surface tension, and atomization might provide useful information for developing and evaluating magnetic field-based fuel treatment devices. So far, the test results for use of the device are, at best, mixed. Should further laboratory analysis and in-use testing provide clearer and more positive outcomes, the market potential for the device will depend significantly on the advances realized from other technologies and

regulatory policies and on its cost-effectiveness relative to other outcomes.

Foundations of Information Technology in the Era of Network and Mobile

Computing is presented in two distinct but interrelated tracks: -Algorithms, Complexity and Models of Computation; -Logic, Semantics, Specification and Verification. This volume contains 45 original and significant contributions addressing these foundational questions, as well as 4 papers by outstanding invited speakers. These papers were presented at the 2nd IFIP International Conference on Theoretical Computer Science (TCS 2002), which was held in conjunction with the 17th World Computer Congress, sponsored by the International Federation for Information Processing (IFIP), and which convened in Montréal, Québec, Canada in August 2002.

**More Technology for the Rest of Us** Nancy D. Courtney,2010-02-26 In this valuable book, 11 chapters each overview a technology of interest to librarians working in the field today. From cloud computing to data curation to open-source software, the world of technology offers great opportunity—and potential frustration. Nancy Courtney and her team of IT experts have set out to enhance the former and alleviate the latter. More Technology for the Rest of Us: A Second Primer on Computing for the Non-IT Librarian follows up on Courtney's 2005 technology volume by tackling the most recent advances in IT. Each chapter describes a technology important to the library field, explains how it works in terms a non-IT professional can understand, and describes its uses. The essays in More Technology for the Rest of Us are not meant to make readers experts, but to provide a basic introduction to some of the current technologies impacting libraries and their patrons. Articles are brief and clearly written, and computer jargon is defined and explained. Each chapter lists references for further information, and there is a selected bibliography and glossary at the end of the book.

**Pro Web Gadgets for Mobile and Desktop** Sterling Udell,2010-04-06 The miniature web applications known as gadgets (or widgets) are a key component of the distributed web and an ideal way to publish your content far beyond the reach of your own web site. Packaging web content and functionality into a gadget enables it to be seen anywhere from iGoogle to the iPhone—wherever the user may be, on or off the traditional web. Everyone can access your content without having to visit your web site. This book is a practical guide to building gadgets that will work everywhere, from handheld devices to any site on the web. The core methodology is to develop a single code base that will run on all platforms, multiplying the syndication opportunities for maximum return on your development investment. Extending this approach is a technique of abstracting key API calls from the various gadget platforms into a single interface layer, implemented in the book as a compact JavaScript class, allowing your gadgets full access to every platform's power without your having to rewrite your code for each. Learn the key concepts for successfully syndicating web content via gadgets. Build platform-agnostic gadgets that run on all the major web portals. Deploy your gadgets to web-enabled handheld devices.

**Corporate Reputation** Ronald J. Burke, Graeme Martin, 2016-05-13 Increasing media scrutiny, global coverage and communication via the internet means corporate reputation can be damaged quickly, and failing to successfully address challenges to corporate reputation has consequences. Companies generally suffer almost ten times the financial loss from damaged reputations than from whatever fines may be imposed. According to Ernst & Young, the investment community believes up to 50 per cent of a company's value is intangible - based mostly on corporate reputation. So recognizing potential threats, or anticipating risks, emerges as a critical organizational competence. Organizations can regain lost reputations, but recovery takes a long time. Corporate Reputation contains both academic content along with practical contributions, developed by those serving as consultants or working in organizations in the area of corporate reputation and its management or recovery. It covers: why corporate reputation matters, the increase in reputation loss, threats to corporate reputation, monitoring reputation threats online and offline, the key role of leadership in reputation recovery, and making corporate reputation immune from threats. Any book that is going to do justice to a subject that is so complex and intangible needs imagination, depth and range, and this is exactly what the contributors bring with them.
