Environmental and Criminal Geoforensics D. Pirrie,A. Ruffell,L.A. Dawson ,2013-12-05 Geological techniques are widely used in two aspects of serious criminal investigations: (1) the search for clandestine burial sites, based on near-surface geophysics or through the detection of decomposition signals and (2) the analysis of trace evidence to identify its source location or test the possible association between the trace evidence and a known location of an offence. Although geoforensics is used in such investigations world-wide there are still considerable gaps in the published literature. In addition, there is increasing concern regarding the illegal release of wastes either into the atmosphere, water courses or on to the land surface, and a growing realization that the techniques used in criminal forensics are equally useful in the investigation of environmental crime. This book bridges the gap between environmental and criminal geoforensics with conceptual, methodological and case study contributions. This demonstrates the significant potential that geoforensics holds for investigating and regulatory officers.

Sustainable Human Development in the Twenty-First Century - Volume II Ismail Sirageldin, 2008-12-31 Sustainable Human Development in the Twenty-First Century is a component of Encyclopedia of Human Resources Policy, Development and Management in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty Encyclopedias. The volume of Human Development examines the state and nature of human development and identifies factors that determine its promotion for the twenty-first century. A general goal, since the ultimate goal for human development is to enhance the quality of human life. However, the concept "quality of human life" is not well defined. It is determined by a set of interrelated factors that cut across many disciplines with varied perspectives and paradigms. These include the prevailing culture, health status, economic performance, technological development, political and social conditions, the building of human capacity and capabilities, and institutional development on the local and global levels. For example, in an environment characterized by a better quality of human life, it is expected that people will be able to lead long and productive lives. They are also expected to enjoy good health, have access to knowledge and educational opportunities, and be treated by all with respect, in a socially equitable and dignified manner. In the sphere of political economy, they are expected to have the opportunity to participate in governance decisions that affect their lives and the community in which they live; and to have the potential to earn sufficient income to supply themselves with adequate nutrition, shelter, and other material and aesthetic needs. Furthermore, people are expected to maintain a sustainable environment and equitable social contracts across space and generations, especially in the context of the evolving global governance. The volume of "Sustainable Human Development in the Twenty-First Century" is

divided into five topics which are then expanded into multiple subtopics, each as a chapter presented in two volumes. The first is “Major issues in Human Development” and provides an over view of the Topic with emphasis on the sociological foundation of human development. The second Topic, “Diversity and Historical Processes” reviews the historical and technological processes which have led to the present state of human diversity and differentiation. The third Topic, “Causes of Global Change” focuses on whether it is possible in the present global environment to enlarge people's capabilities so that economic progress may be translated into a multidimensional human happiness. The fourth Topic, “Consequences of Global Change” examines global change not in the narrow sense of short-term economic change, but rather as historical waves of long-term development. The fifth Topic on Planning Strategies reviews current practice and projects challenges in the next century. These two volumes are aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers, and Decision Makers and NGOs.

Embedded Systems Handbook Richard Zurawski,2005-08-16 Embedded systems are nearly ubiquitous, and books on individual topics or components of embedded systems are equally abundant. Unfortunately, for those designers who thirst for knowledge of the big picture of embedded systems there is not a drop to drink. Until now. The Embedded Systems Handbook is an oasis of information, offering a mix of basic a

Performance Based Logistics: A Program Manager's Product Support Guide ,2005 Performance Based Logistics (PBL) is the preferred Department of Defense (DoD) product Support strategy to improve weapons system readiness by procuring performance, which capitalizes on integrated logistics chains and public/private partnerships. The cornerstone of PBL is the purchase of weapons system sustainment as an affordable, integrated package based on output measures such as weapons system availability, rather than input measures, such as parts and technical services. The Quadrennial Defense Review (QDR) and /the Defense Planning Guidance (DPG) directed the application of PBL to new and legacy weapons systems. PBL Implementation is also mandated by DoD Directive 5000.1, The Defense Acquisition System, May 12, 2003. This guide is a tool for Program Managers (PMs) and Product Support Managers (PSMs) as they design product support strategies for new programs or major modifications, or as they re-engineer product support strategies for existing fielded systems. It presents a method for implementing a PBL product support strategy. PBL delineates outcome performance goals of systems, ensures that responsibilities are assigned, provides incentives for attaining these goals, and facilitates the overall life cycle management of system reliability, supportability, and total owner ship costs. It is an integrated acquisition and logistics process for providing weapons system capability.

As America Has Done to Israel John P. McTernan,2008-03-04 Is America on a collision course with God? There is a direct correlation between the alarming number of massive disasters striking America and her leaders pressuring Israel to surrender her land for “peace.” Costing hundreds of lives and causing hundreds of billions of dollars’ damage, dozens of disasters including devastating earthquakes, raging fires, hurricanes, floods, tsunamis, and violent tornadoes have hit America—and always within twenty-four hours of putting pressure on Israel. What can you do as an individual—and what can America do—to change the direction of our country in relation to Israel and prevent the increasing number of calamities?
