Why Grow Here Kathryn Chase Merrett,2015-08-26 "A visitor from down south stared at my apple tree and said: 'Those don't grow here you know. It's too cold.' If the apricot tree in Highlands knew it couldn't live here, it might stop scattering white blossoms over three lawns." – Bert Almon Edmonton has a rich and diverse horticultural history. Vacant lot gardeners, rose gardeners, and horticultural societies have all contributed to the beautification of the capital city of Alberta, and through the enthusiasm of florists, seedsmen, and plant breeders the city has developed a distinct horticultural character. In this collection of nine essays, each with a different theme, Kathryn Chase Merrett depicts the development of Edmonton's social, cultural, and physical landscape as it has been shaped by champions of both nature and the garden. Edmontonians and all urbanites interested in gardening and local history, as well as professors and students of history, cultural studies, and urban design, will delight in the colourful storytelling of Why Grow Here.

Multiscale Modelling of Organic and Hybrid Photovoltaics David Beljonne,Jerome Cornil,2014-08-12 The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. Review articles for the individual volumes are invited by the volume editors. Readership: research chemists at universities or in industry, graduate students.

9/11-Enemies Foreign and Domestic Edward Hendrie,2011 Hendrie proves beyond a reasonable doubt that the U.S. government's conspiracy theory of the attacks on September 11, 2001, is a preposterous cover story. The evidence proves that powerful Zionists ordered the 9/11 attacks, which were perpetrated by Israel's Mossad, aided and abetted by treacherous high officials in the U.S. government.

Environmental Success Stories Frank Dunnivant,2017-03-21 Unlike many titles on environmental issues that portend a dark future, Environmental Success Stories delves into the most daunting ecological and environmental challenges humankind has faced and shows how scientists, citizens, and a responsive public sector have dealt with them successfully. In addition to presenting the basic chemical and environmental science underlying problems like providing clean drinking water, removing DDT and lead from agriculture and our homes, and curtailing industrial pollution, this book also discusses the political actors, agency regulators, and community leaders who have collaborated to enact effective legislation. Sharing the stories of the people, organizations, and governments who have addressed these problems successfully, Frank M. Dunnivant explains how we might confront the world's largest and most complex environmental crisis: climate change. Now is the time for rededicated scientific exploration and enlightened citizen action to save our environment, and Dunnivant's book offers a stirring call to action.

Power and Time Dan Edelstein,Stefanos Geroulanos,Natasha Wheatley,2020-12-11 Time is the backdrop of historical inquiry, yet it is much more than a featureless setting for events. Different temporalities interact dynamically; sometimes they coexist tensely, sometimes they clash violently. In this innovative volume, editors Dan Edelstein, Stefanos Geroulanos, and Natasha Wheatley challenge how we interpret history by focusing on the nexus of two concepts—"power" and "time"—as they manifest in a wide variety of case studies. Analyzing history, culture, politics, technology, law, art, and science, this engaging book shows how power is constituted through the shaping of temporal regimes in historically specific ways. Power and Time includes seventeen essays on human rights; sovereignty; Islamic, European, Chinese, and Indian history; slavery; capitalism; revolution; the Supreme Court; the Anthropocene; and even the Manson Family. Power and Time will be an agenda-setting volume, highlighting the work of some of the world's most respected and original contemporary historians and posing fundamental questions for the craft of history.
