**Corruption and Realism in Late Socialist China** Jeffrey Kinkley, 2006-10-26 As China's centrally planned economy and welfare state have given way to a more loosely controlled version of late socialism, public concern about economic reform's downside has found expression in epic novels about official corruption and its effects. While the media shied away from dealing with these issues, novelists stepped in to fill the void. Anti-corruption fiction exploded onto the marketplace and into public consciousness, spawning popular films and television series until a clampdown after 2002 that ended China's first substantial realist fiction since the 1989 Beijing massacre. With frankness and imagination seldom allowed journalists, novelists have depicted the death of China's rust-belt industries, the gap between rich and poor, social unrest—i.e., riots—and the questionable new practices of entrenched communist party rulers. *Corruption and Realism* examines this rebirth of the Chinese political novel and its media adaptations, explaining how the works reflect contemporary Chinese life and how they embody Chinese traditions of social criticism, literary realism, and contemplation of taboo subjects. This is the first book to investigate such novels and includes excerpts from personal interviews with China's three most famous anticorruption novelists.

**The Matthew's Bible** John Rogers, 2009 The Matthew's Bible brings together the work of two giants of sixteenth century English Bible translation. William Tyndale and Myles Coverdale shared a vision of making the scriptures available to ordinary believers concerned that their authority might be undermined in a time when kings and clerics alike opposed translating them into English. William Tyndale's New Testament (1526) was the first English translation made from the original language, and it made the most of the emerging English tongue. Knowing neither Hebrew nor Greek, Myles Coverdale consulted Latin, English and German sources to guide his work. The vocabulary of Tyndale, John Wycliff, and other appears in the Coverdale Bible (1535), which was the first complete Bible in English. John Rogers combined Tyndale's and Coverdale's texts -- supplying some translation work of his own -- to create the Matthew's Bible. It was attributed to a fictitious Thomas Matthew, concealing the inclusion of Tyndale's text so King Henry VIII would license the volume's publication. So popular became the Matthew's Bible that bishops were encouraged to order copies for their parishes. This book is a facsimile of one of the finest existing copies of the Matthew's Bible. It features clear, legible type and faithfully reproduced, color pages with a new introduction by Dr. Joseph W. Johnson. -- Back cover

*In the Nation's Compelling Interest* Institute of Medicine, Board on Health Sciences Policy, Committee on Institutional and Policy-Level Strategies for Increasing the Diversity of the U.S. Health Care Workforce, 2004-07-29 The United States is rapidly transforming into one of the most racially and ethnically diverse nations in the world. Groups commonly referred to as minorities—including Asian Americans, Pacific Islanders, African Americans, Hispanics, American Indians, and Alaska Natives—are the fastest growing segments of the population and emerging as the nation's

majority. Despite the rapid growth of racial and ethnic minority groups, their representation among the nation's health professionals has grown only modestly in the past 25 years. This alarming disparity has prompted the recent creation of initiatives to increase diversity in health professions. In the Nation's Compelling Interest considers the benefits of greater racial and ethnic diversity, and identifies institutional and policy-level mechanisms to garner broad support among health professions leaders, community members, and other key stakeholders to implement these strategies. Assessing the potential benefits of greater racial and ethnic diversity among health professionals will improve the access to and quality of healthcare for all Americans.

**Security, the Environment and Emancipation** Matt McDonald,2012-01-30 This book offers an examination of the role of emancipation in the study and practice of security, focusing on the issue of environmental change. The end of the Cold War created a context in which traditional approaches to security could be systematically questioned. This period also saw a concerted attempt in IR to argue that environmental change constituted a threat to security. This book argues that such a notion is problematic as it suggests that a universal definition of security is possible, which prevents a recognition of security as a site of contestation, in which a range of actors articulate alternative visions of who or what is in need of being secured. If security is understood and approached in traditional terms - as the territorial preservation of the nation-state from external threat - then it is indeed difficult to see how environmental issues would benefit from being placed on states' security agenda. If, however, security is defined in terms of the emancipation of the most vulnerable individuals from contingent structural oppressions, then drawing a relationship between environmental change and security may be beneficial for redressing those environmental issues and prioritising the needs of those most at risk from the manifestations of global environmental change. This book takes the limitations of contemporary approaches to the relationship between the environment and security as its starting point, and seeks to do two things. First, it aims to illustrate the ways in which arguments over approaches to environmental issues can be viewed as contestation over the meaning of 'security' in particular political contexts. Central here is the composition and assumptions of the dominant security discourse to emerge regarding those issues: a framework of meaning for the most important forms of action on behalf of a particular group, defining the terms for meaningful contestation and negotiation about security itself within that group. As such, the book attempts to illustrate the dynamics of competition over the meaning of security with reference to environmental issues, particularly focusing on instances of political change in the dominant security discourse through which that issue is approached. In the process the author points to the central role of these dominant security discourses in underpinning the most practically significant actions regarding environmental issues such as deforestation and global climate change. The book employs methodological tools that enable a focus on how particular frameworks of meaning are constituted and become dominant; how they provide a lens through which various issues are approached; and how discourses most consistent with redressing environmental change and the suffering of the most vulnerable might come to provide the framework through which security is viewed in particular contexts. This book will be of much interest to students of Critical Security Studies, geography, sociology, IR and Political Science in general.
