Internet Guide to Knowledge Management and Intellectual Capital Sabine Pekarz, 2002-03-07 Inhaltsangabe: Abstract: This survey has shown that, although the internet is full of information, it is difficult to find the information required fast. Before starting an internet survey, it is essential to be conscious of the intention of the search and the expected results and to translate this into one or more keywords. The intention of the keyword searches knowledge management and intellectual capital was to find out how the topic is treated on different pages. The categorization by content has shown that a main part of the links can be assigned in the advertisement categories. This is the case for both, the hits of MetaCrawler and those of Umap. A further community of the results of the two search instruments is that the categories knowledge base and best practices only take a small part whereas the categories content discussion and collection of resources are relatively well-attended. Great importance has been attached to the category content discussion in the index and chapter 6 is fully dedicated to interesting links concerning the content. This is because the discussion of the topics, combined with definitions and explanations, is the background and the basis for the rest of the categories. As the assignment to the category content discussion does not declare anything about the quality of the discussions, the index in chapter 4 has to be included in the study. Strictly speaking, a great part of those links is dedicated to advertisement and gives some explanations concerning the topics. It has been detected that most of the pages with content discussion give only a short introduction into the topic. The pages that examine the topics more closely are an exception to the rule. Five links of this minority are introduced in chapter 6. Two of them are very interesting pages concerning the content. They are listed at top position, because different opinions concerning knowledge management and intellectual capital are introduced, the topics are treated in great detail and the explanations are good and quite easy to duplicate. In order to find out, if the results are capable to represent the totality, the reliability of the categorization, built up with Umap (artificial intelligence) and that built by human intelligence have been analyzed with the means of hypotheses. The test of the hypotheses, that are based on a comparison of the results and processes of the categorizations, has shown that the categorization by [...]

Inventing the Cloud Century Marcus Oppitz, Peter Tomsu, 2017-08-03 This book combines the three dimensions of technology, society and economy to explore the advent of today's cloud ecosystems as successors to older service ecosystems based on networks. Further, it describes the shifting of services to the cloud as a long-term trend that is still progressing rapidly. The book adopts a

comprehensive perspective on the key success factors for the technology – compelling business models and ecosystems including private, public and national organizations. The authors explore the evolution of service ecosystems, describe the similarities and differences, and analyze the way they have created and changed industries. Lastly, based on the current status of cloud computing and related technologies like virtualization, the internet of things, fog computing, big data and analytics, cognitive computing and blockchain, the authors provide a revealing outlook on the possibilities of future technologies, the future of the internet, and the potential impacts on business and society.

Japan's Nationalist Right in the Internet Age Jeffrey J. Hall,2021-04-07 Japan's nationalist right have used the internet to organize offline activism in increasingly visible ways. Hall investigates the role of internet-mediated activism in Japan's ongoing historical and territorial disputes. He explores the emergence of two right-wing activist organizations, Nihon Bunka Channel Sakura and Ganbare Nippon, which have played a significant role in pressure campaigns against Japanese media outlets, campaigns to influence historical memorials, and campaigns to assert Japan's territorial claim to the Senkaku/Diaoyu Islands. Taking a multi-disciplinary approach, he analyses how activists maintained cohesion, raised funds, held protests that regularly drew hundreds to thousands of participants, and

used fishing boats to land activists on disputed islands. Detailing events that took place between 2004 and 2020, he demonstrates how skilled social actors built cohesive grassroots protest organizations through the creation of shared meaning for their organization and its supporters. A valuable read both for scholars seeking insight into the dynamics surrounding Japan's history disputes and territorial issues, as well as those seeking to compare Japanese right-wing internet activism with its counterparts elsewhere.

The "Hidden" Prehistory of European Research Networking Olivier Martin, 2012-06-18 The main purpose of this book, which mostly covers the period 1984-1993, is about the history of European research networking. In particular, it strives to throw some light on some lesser known, sometimes forgotten, aspects of the European research networking history, as the EARN and EASInet initiatives from IBM but also DEC (EARN/OSI), thanks to operational pan-European networks, which were built during the period 1984-1990 thus allowing the start of operational European academic and research networking services in a very effective and swift manner. A secondary purpose of this article is to make a critical assessment of the political and technical achievements of the European NRENs and especially those of DANTE, the company set up by these same NRENs to build and operate a pan-European backbone interconnecting their national networking infrastructures as well as establishing international connections to other NRENs worldwide.

La vie privée à l'ère du numérique REY Bénédicte,2012-09-05 La démocratisation de l'informatique, puis des usages de l'internet, de la téléphonie mobile, ou plus récemment d'autres objets communicants génèrent une profusion de traces numériques gardant en mémoire les actions des usagers. Approuvé par certains qui y voient l'opportunité d'améliorer la sécurité publique, la relation marchande ou encore leur propre confort quotidien, ce constat fait craindre à d'autres l'avènement d'une société de la surveillance érodant le respect de la vie privée. Cet ouvrage étudie la notion d'espace privé à l'ère du numérique. Il montre comment les changements technologiques, de services et d'usages redéfinissent l'acceptation traditionnelle de la vie privée fondée sur des normes, et comment, en complément du dispositif normatif existant, des modalités de régulation appropriables par les individus sont envisagées.
