Achieving Airport-compatible Land Uses and Minimizing Hazardous Obstructions in Navigable Airspace Jocelyn Waite, 2012 This report discusses airport compatible land use requirements, the legal issues related to achieving airport compatible land use, and legal issues particular to eliminating hazardous obstructions to airspace. The report concludes by reviewing the major legal issues of concern in achieving airport-compatible land use. While general legal principles relevant to airport land use are well established, they are often applied on a case by case basis, particularly in the context of regulatory takings and inverse condemnation. This ad hoc analysis introduces, if not an element of unpredictability, at least some variation in the law by jurisdiction. The need for greater predictability highlights the significance of including airport zoning as part of comprehensive land use planning. This report should be helpful to airport administrators, attorneys, board members, financial officers, community members in the vicinity of airports, realtors, and city and county zoning officials.

*The SAGE Handbook of Spatial Analysis* A Stewart Fotheringham, Peter A Rogerson, 2008-12-22 The widespread use of Geographical Information Systems (GIS) has significantly increased the demand for knowledge about spatial analytical techniques across a range of disciplines. As growing numbers of researchers realise they are dealing with spatial data, the demand for

specialised statistical and mathematical methods designed to deal with spatial data is undergoing a rapid increase. Responding to this demand, The Handbook of Spatial Analysis is a comprehensive and authoritative discussion of issues and techniques in the field of Spatial Data Analysis. Its principal focus is on:

- why the analysis of spatial data needs separate treatment
- the main areas of spatial analysis
- the key debates within spatial analysis
- examples of the application of various spatial analytical techniques
- problems in spatial analysis
- areas for future research

Aimed at an international audience of academics, The Handbook of Spatial Analysis will also prove essential to graduate level students and researchers in government agencies and the private sector.

**On-line Virtual Museums: an application of on-line VR Museum for the Parthenon Marbles. Internet: a means of cultural repatriation** Kleio

Tzanaki, 2004-12-16 Among the most debated archaeological problems is the repatriation of cultural objects that have been removed from the country of origin and then dispersed in Museums around the world. The need for the return of cultural objects to their homelands is not only derived from the people they belong to, but also from those they appreciate their value and have archaeological interest in them. However, there are a number of problems revolved around most cases, which prohibit the cultural repatriation to be achieved. The case of the Parthenon Marbles is one of the best-known claims for the repatriation of cultural property, as its sculptures, which constitute an integral part of it, have been removed from the temple and are stored in different Museums. Towards the problem of cultural repatriation, Parthenon Marbles case study is used to research to what extent the Internet can be introduced as a means of providing a form of cultural repatriation through the idea of a Virtual Museum. The argument is supported by the conception, design and construction of a Virtual Museum for the Parthenon Marbles. The web site is a pilot application implementing some sides of the

temple, while providing guidelines and techniques for completion of the rest. The development of the web site also provided an opportunity for evaluating tools and techniques used in virtual museums. Finally, the VR Museum concept as a means of repatriation is evaluated, discussing the areas where such an application would be beneficial and also the level of information that can provide for the specified repatriated object(s) according to specific user groups and needs.
