Psychoanalytic Energy Psychotherapy Phil Mollon,2018-03-26 People like to talk. We know that talking to an attentive and thoughtful listener can be helpful in clarifying conscious and unconscious feelings, thoughts, and motivations. But is talk enough? The complex physiology of anxiety and traumatic stress reactions is often stubbornly persistent, despite therapeutic exploration in both conscious and unconscious areas of the mind. In the case of severe trauma, talking can stir up the emotions and associated bodily disturbance without providing any resolution - sometimes leaving clients feeling worse. The developing field of energy psychology offers an entirely new perspective and gamut of techniques for locating where these traumatic patterns are encoded. They are not in the mind - but in the energy system at the interface of psyche and soma. By addressing these realms concurrently, a powerful therapeutic synergy emerges that allows rapid and deep shifts in the patterns of distress that drive the psychosomatic system.

Killing Our Oceans John Charles Kunich, 2006-05-30 In his *Ark of the Broken Covenant*, Kunich showed that Earth's species are concentrated in 25 zones of ecological significance known as biodiversity hotspots, and maintained that we'd go a long way toward saving many species from extinction if we'd focus our protective laws and regulations on these zones. In *Killing Our Oceans* he extends this analysis to the extraordinary pockets of life in the oceans that are similarly threatened. In his *Ark of the Broken Covenant*, Kunich showed that Earth's species are concentrated in 25 zones of ecological significance known as biodiversity hotspots, and that we'd go a long way toward saving many species from extinction if we'd focus our protective laws and regulations on these zones. In *Killing Our Oceans* he extends this analysis to the extraordinary pockets of life in the oceans that are similarly threatened. From coral reefs to recently discovered hydrothermal vents, the oceans contain vast numbers of endangered species. We are rapidly losing these unique, irreplaceable treasures, due in part to an appalling lack of efficacious safeguards. What's in it for us if we intervene to halt this mass extinction? Quite possibly the greatest medical, nutritional, and scientific breakthroughs in all of human history, just waiting to be discovered and harnessed—or forever lost along with the dying species that hold the keys to these secrets. Kunich examines in detail the applicable international laws as well as domestic laws of the nations with key marine resources, and demonstrates the abject failure of these measures to prevent or halt a mass extinction in our oceans. He concludes with a set of legal proposals that could start us down the road to preserving the marine hotspots and, with them,

most of Earth's biodiversity. Legal solutions are not the only answer, but they are a beginning.
