Investing in Innovation William Lazonick,2023-06-30 Business corporations interact with household units and government agencies to make investments in productive capabilities required to generate innovative goods and services. When they work harmoniously, these three types of organizations constitute 'the investment triad'. The Biden administration's Build Back Better agenda to restore sustainable prosperity in the United States has focused on investment in productive capabilities by government agencies and household units. Largely absent from the Biden agenda have been policy initiatives to ensure that, given government and household investment in productive capabilities, the governance of major U.S. business corporations supports investment in innovation. This Element explains how corporate financialization, manifested by predatory value extraction in the name of 'maximizing shareholder value', undermines investment in innovation in the United States. It concludes by outlining a policy framework, beginning with a ban on stock buybacks, that confronts predatory value extraction and puts in place social institutions that support sustainable prosperity.

Andy Grove Richard S. Tedlow,2007 Brilliant, brave, and willing to defy conventional wisdom, Andy Grove, the CEO of Intel during its years of explosive growth, is on the shortlist of America's most admired businesspeople. Grove gave Tedlow unprecedented access to his private papers, along with wide-ranging interviews and access to friends and key business associates. The result is not just a life story but a fascinating analysis of how Grove attacks problems. Born a Hungarian Jew in 1936, András István Gróf survived the Nazis only to face the Soviet invasion of his country. He fled to America at age twenty, studied engineering, and arrived in Silicon Valley just in time to become the third employee of Intel. As talented as he was as an engineer, Grove became an even better manager. Tedlow shows us exactly how the penniless immigrant taught himself to lead a major corporation through some of the toughest challenges in the history of business.--From publisher description.

Measuring and Accounting for Innovation in the Twenty-First Century Carol Corrado, Jonathan Haskel, Javier Miranda, Daniel Sichel, 2021-05-12 Measuring innovation is a challenging task, both for researchers and for national statisticians. This task is timely and valuable given that policy and public interest in innovation has become increasingly intense in this era of digital revolution, yet National GDP Accounts and other economic statistics do not fully account for the wide range of innovative activity that is plainly evident in everyday experience. Indeed, innovation has in many ways changed the structure of an increasingly digitized marketplace, from cloud computing to the gig economy. The papers collected in this volume, *Measuring and Accounting for Innovation in the Twenty-First Century*, address many different dimensions of this challenge, ranging from how to best to define GDP to the fundamental question of what is an innovation and how to collect data at the level of an individual innovation. Taken together, the volume provides a comprehensive overview of the cutting-edge of this widely varied but thematically-connected research that draws on multiple methodologies and data. The editors and authors consider how measurement frameworks could be expanded to enhance our understanding of innovative activity; new approaches and evidence that could account for innovation's economic impact; innovation's effect across the economy, from production processes to labor markets and financial activities; and what practical adjustments could be made to current measurements that would better capture innovation. The distinctive stance of this volume makes clear that the challenge of measuring innovation and understanding its implications has become increasingly complex as the economy has evolved. The editors and authors show that the limitations of our existing measurement system significantly hinder researchers, analysts, and policymakers. Better measures of innovative activity are necessary to interpret the consequences of innovation in daily life and to inform policies that best promote the attendant benefits, including distribution of income, trademark protections, and more. Now, in an era of fake news and alternative facts, it is more important than ever to push for accuracy in basic economic facts--

Hydrogen Energy Paul Ekins, 2010-08-12 Hydrogen could be a significant fuel of the future, with the potential to make a major contribution to the resolution of pressing social and environmental problems such as carbon emissions, energy security and local air pollution. This book, based on four years of detailed research, subjects the promise and potential of hydrogen to searching, in-depth socio-economic analysis. It discusses the different technologies for the production, distribution, storage and use of hydrogen, and analyses the economics of these technologies and their current market prospects. It also describes various experiences with aspects of a hydrogen economy in two parts of the world – the UK and Canada – and then assesses the nature of different hydrogen futures that might develop depending on how the technology, economics, social acceptance and policy frameworks play out in different contexts. The book ends by setting out the policy drivers and levers which could stimulate a virtuous circle of research and development, innovation and investment that might ultimately generate a sustainable hydrogen economy. This is essential reading for economists, engineers, business leaders, investors, policy makers, researchers and students who are interested in the future of the energy system and the part that hydrogen might play in it.

Chip War Chris Miller, 2022-10-04 An epic account of the decades-long battle to control what has emerged as the world's most critical resource—microchip technology—with the United States and China increasingly in conflict. You may be surprised to learn that microchips are the new oil—the scarce resource on which the modern world depends. Today, military, economic, and geopolitical power are built on a foundation of computer chips. Virtually everything—from missiles to microwaves—runs on chips, including cars, smartphones, the stock market, even the electric grid. Until recently, America designed and built the fastest chips and maintained its lead as the #1 superpower, but America's edge is in danger of slipping, undermined by players in Taiwan, Korea, and Europe taking over manufacturing. Now, as *Chip War* reveals, China, which spends more on chips than any other product, is pouring billions into a chip-building initiative to catch up to the US. At stake is America's military superiority and economic prosperity. Economic historian Chris Miller explains how the semiconductor came to play a critical role in modern life and how the U.S. became dominant in chip design and manufacturing and applied this technology to military systems. America's victory in the Cold War and its global military dominance stems from its ability to harness computing power more effectively than any other power. But here, too, China is catching up, with its chip-building ambitions and military modernization going hand in hand. America has let key components of the chip-building process slip out of its grasp, contributing not only to a worldwide chip shortage but also a new Cold War with a superpower adversary that is desperate to bridge the gap. Illuminating, timely, and fascinating, *Chip War* shows that, to make sense of the current state of politics, economics, and technology, we must first understand the vital role played by chips.
