<u>Internet Domain Names, Trademarks and Free Speech</u> Jacqueline D. Lipton,2010-01-01 As the first form of truly rivalrous digital property, Internet domain names raise many challenges for law and policy makers. Analyzing the ways in which past disputes have been decided by courts and arbitrators, Jacqueline Lipton offers a comprehensive, global examination of the legal, regulatory and policy issues that will shape the future of Internet domain name governance. This comprehensive examination of domain name disputes involving personal names and political and cultural issues sheds light on the need to balance trademark policy, free speech and other pressing interests such as privacy and personality rights. The author stresses that because domain names can only be registered to one person at a time, they create problems of scarcity not raised by other forms of digital assets. Also discussed are the kinds of conflicts over domain names that are not effectively addressed by existing regulations, as well as possible regulatory reforms. Internet Domain Names, Trademarks and Free Speech brings pivotal new insights to bear in intellectual property and free speech discourse. As such, policymakers, scholars and students of intellectual property, cyber law, computer law, constitutional law, and e-commerce law will find it a valuable resource.

At present, the concept of cyberspace sovereignty is still very strange to many people, so it needs to be thoroughly analyzed. This book will not only help scientific and technical workers in the field of cyberspace security, law researchers and the public understand the development of cyberspace sovereignty at home and abroad, but

also serve as reference basis for the relevant decision-making and management departments in their work.

  Blindsight Peter Watts,2006-10-03 Hugo and Shirley Jackson award-winning Peter Watts stands on the cutting edge of hard SF with his acclaimed novel, Blindsight Two months since the stars fell... Two months of silence, while a world held its breath. Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a biologist so radically interfaced with machinery that he sees x-rays and tastes ultrasound. You send a pacifist warrior in the faint hope she won't be needed. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. And you send a synthesist—an informational topologist with half his mind gone—as an interface between here and there. Pray they can be trusted with the fate of a world. They may be more alien than the thing they've been sent to find. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
