The Greenwood Encyclopedia of Children's Issues Worldwide [6 volumes] Irving Epstein, 2007-12-30 From the skyrocketing AIDS rate in Haiti to the oppressive pollution in industrial China, from the violent street culture of Nigeria to the crippling poverty in Nicaragua, from child trafficking in Thailand to child marriages in India, this jam-packed six-volume set explores all these issues and more in an unprecedented look at the world's children at the dawn of the 21st century. In recent years, while many countries have enjoyed a higher standard of living and improved working conditions, others have been torn apart by war and incapacitated by famine, and are struggling to improve life for their children and their future. Recent concern over the world's children has resulted in a global attempt to define what constitutes an acceptable childhood. New attention has been paid, not only to healthcare and secondary education, but also to the right to play and increased access to technology. The UN's codification of children's rights has done much to expand our understanding of what is needed for healthy growth and development of children and youth. Organized by region, *The Greenwood Encyclopedia of Children's Issues Worldwide* is the first globally focused set of this magnitude, offering extensive, up-to-date coverage of these critical issues. Original chapters accessibly synthesize current data on key topics, including education, play and recreation, child labor, family, health, laws and legal status, religious life, abuse and neglect, and growing up in the 21st century.

What Motivates Faculty to Teach in Distance Education? Ruth Gannon-Cook, 2010-10-14 *What Motivates Faculty to Teach in Distance Education?* provides seminal data on what has been found to best motivate faculty to teach online. This information is critical to most universities because, in order to stay competitive, many will increase their online course offerings. Faculty will be needed to design and teach these programs.

Advanced Topics in Information Resources Management Mehdi Khosrow-Pour, 2005-01-01 *Advanced Topics in Information Resources Management* is a series of books, which feature the most current research findings in all aspects of information resources management. From successfully implementing technology change to understanding the human factors in IT utilization, these volumes address many of the managerial and organizational applications to and implications of information technology in organizations. *Advanced Topics in Information Resources Management, Volume 4* is a part of this series. *Advanced Topics in Information Resources Management, Volume 4* presents new concepts in handling and sharing information resources with organizations and individuals worldwide. This book provides insight into and assistance in learning how to successfully implement information resources and technology in the companies, schools, and homes of those who depend upon it.

Manual of Romance Languages in Africa Ursula Reutner, 2023-12-18 With more than two thousand languages spread over its territory, multilingualism is a common reality in Africa. The main official languages of most African

countries are Indo-European, in many instances Romance. As they were primarily brought to Africa in the era of colonization, the areas discussed in this volume are thirty-five states that were once ruled by Belgium, France, Italy, Portugal, or Spain, and the African regions still belonging to three of them. Twenty-six states are presented in relation to French, four to Italian, six to Portuguese, and two to Spanish. They are considered in separate chapters according to their sociolinguistic situation, linguistic history, external language policy, linguistic characteristics, and internal language policy. The result is a comprehensive overview of the Romance languages in modern-day Africa. It follows a coherent structure, offers linguistic and sociolinguistic information, and illustrates language contact situations, power relations, as well as the cross-fertilization and mutual enrichment emerging from the interplay of languages and cultures in Africa.

Transport Revolutions Richard Gilbert, Anthony Pearl, 2012-05-16 *Transport Revolutions: Moving People and Freight without Oil* sets out the challenges to our growing dependence on transport fuelled by low-priced oil. These challenges include an early peak in world oil production and profound climate change resulting in part from oil use. It proposes responses to ensure effective, secure movement of people and goods in ways that make the best use of renewable sources of energy while minimizing environmental impacts. *Transport Revolutions* synthesizes engineering, economics, environment, organization, policy and technology, and draws extensively on current data to present important conclusions. The authors argue that land transport in the first half of the 21st century will feature at least two revolutions. One will involve the use of electric drives rather than internal combustion engines. Another will involve powering many of these drives directly from the electric grid - as trains and trolley buses are powered today - rather than from on-board fuel. They go on to discuss marine transport, whose future is less clear, and aviation, which could see the most dramatic breaks from current practice. With its expert analysis of the politics and business of transport, *Transport Revolutions* is essential reading for professionals and students in transport, energy, town planning and public policy.

Computational Fluid Dynamics and Energy Modelling in Buildings Parham A. Mirzaei, 2022-11-14 **COMPUTATIONAL FLUID DYNAMICS AND ENERGY MODELLING IN BUILDINGS** A Comprehensive Overview of the Fundamentals of Heat and Mass Transport Simulation and Energy Performance in Buildings In the first part of *Computational Fluid Dynamics and Energy Modelling in Buildings: Fundamentals and Applications*, the author explains the fundamentals of fluid mechanics, thermodynamics, and heat transfer, with a specific focus on their application in buildings. This background knowledge sets the scene to further model heat and mass transport in buildings, with explanations of commonly applied simplifications and assumptions. In the second part, the author elaborates how the fundamentals explained in part 1 can be used to model energy flow in buildings, which is the basis of all commercial and educational building energy simulation tools. An innovative illustrative nodal network concept is introduced to help readers comprehend the basics of conservation laws in buildings. The application of numerical techniques to form dynamic simulation tools are then introduced. In general, understanding these techniques will help readers to identify and justify their choices when working with building energy simulation tools, rather than using default settings.

Detailed airflow information in buildings cannot be obtained in building energy simulation techniques. Therefore, part three is focused on introducing computational fluid dynamics (CFD) as a detailed modelling technique for airflow in buildings. This part starts with an introduction to the fundamentals of the finite volume method used to solve the governing fluid equations and the related challenges and considerations are discussed. The last chapter of this part covers the solutions to some practical problems of airflow within and around buildings. The key aspect of Computational Fluid Dynamics and Energy Modelling in Buildings: Fundamentals and Applications is that it is tailored for audiences without extensive past experience of numerical methods. Undergraduate or graduate students in architecture, urban planning, geography, architectural engineering, and other engineering fields, along with building performance and simulation professionals, can use this book to gain additional clarity on the topics of building energy simulation and computational fluid dynamics.

MATLAB Simulations for Radar Systems Design Bassem R. Mahafza, Atef Elsherbeni, 2003-12-17 Simulation is integral to the successful design of modern radar systems, and there is arguably no better software for this purpose than MATLAB. But software and the ability to use it does not guarantee success. One must also: Understand radar operations and design philosophy Know how to select the radar parameters to meet the design req

Constructing the Infrastructure for the Knowledge Economy Henry Linger, Julie Fisher, W. Gregory Wojtkowski, Wita Wojtkowski, Joze Zupancic, Kitty Vigo, Josie Arnold, 2013-03-09 Constructing the Infrastructure for the Knowledge Economy: Methods and Tools, Theory and Practice is the proceedings of the 12th International Conference on Information Systems Development, held in Melbourne, Australia, August 29-31, 2003. The purpose of these proceedings is to provide a forum for research and practice addressing current issues associated with Information Systems Development (ISD). ISD is undergoing dramatic transformation; every day, new technologies, applications, and methods raise the standards for the quality of systems expected by organizations as well as end users. All are becoming more dependent on the systems reliability, scalability, and performance. Thus, it is crucial to exchange ideas and experiences, and to stimulate exploration of new solutions. This proceedings provides a forum for just that, addressing both technical and organizational issues.

Competing with Knowledge Angela Abell, Nigel Oxbrow, 2006-04-28 Knowledge management (KM) is probably the first major management trend to identify information and its management as a crucial element in the success of an organization. In order for information professionals to participate fully in KM initiatives, or to be able to take advantage of the concept to improve the effective application of their skills, both the professionals and management need a good understanding of the KM approach and the information related roles within that framework. This book focuses on the potential role of the information professional in the KM environment and, using plenty of case studies, considers: the knowledge context - creating knowledge based environments in a range of sectors powering information: the role of information skills in KM. Readership: This book will make topical reading not only for those seeking career development through KM but for all information professionals wondering exactly what it is and how it will affect their work. LIS graduates and postgraduates will also be potential readers. Published in association with TFPL Ltd TFPL Ltd have been researching KM since 1996 and have monitored developments in Europe and the USA. They have recently completed an international research project looking at the skills required for the successful implementation of knowledge management.

Origin of the Solar System Dr. Milton M. Beck, 2023-07-24 This book contains the reasons why the author does not believe the accretion disk origin theory for our solar system. That theory might fit other system, but not ours. The author first shows reasons why the currently accepted theory doesn't fit. He goes from one facet of the accretion disk theory to another discrediting each in turn. The author then describes his own theory. The author has made a good effort to define a sequence of events that resulted in our solar system. How well his theory is accepted remains to be seen, but he asks for a fair chance for its evaluation. He presents an interesting idea.
