Artificial Intelligence Applications and Reconfigurable Architectures Anuradha D. Thakare,Sheetal Umesh Bhandari,2023-03-21 ARTIFICIAL INTELLIGENCE APPLICATIONS and RECONFIGURABLE ARCHITECTURES The primary goal of this book is to present the design, implementation, and performance issues of AI applications and the suitability of the FPGA platform. This book covers the features of modern Field Programmable Gate Arrays (FPGA) devices, design techniques, and successful implementations pertaining to AI applications. It describes various hardware options available for AI applications, key advantages of FPGAs, and contemporary FPGA ICs with software support. The focus is on exploiting parallelism offered by FPGA to meet heavy computation requirements of AI as complete hardware implementation or customized hardware accelerators. This is a comprehensive textbook on the subject covering a broad array of topics like technological platforms for the implementation of AI, capabilities of FPGA, suppliers' software tools and hardware boards, and discussion of implementations done by researchers to encourage the AI community to use and experiment with FPGA. Readers will benefit from reading this book because It serves all levels of students and researcher's as it deals with the basics and minute details of Ecosystem Development Requirements for Intelligent applications with reconfigurable architectures whereas current competitors' books are more suitable for understanding only reconfigurable architectures. It focuses on all aspects of machine learning accelerators for the design and development of intelligent applications and not on a single perspective such as only on reconfigurable architectures for IoT applications. It is the best solution for researchers to understand how to design and develop various AI, deep learning, and machine learning applications on the FPGA platform. It is the best solution for all types of learners to get complete knowledge of why reconfigurable architectures are important for implementing AI-ML applications with heavy computations. Audience Researchers, industrial experts, scientists, and postgraduate students who are working in the fields of computer engineering, electronics, and electrical engineering, especially those specializing in VLSI and embedded systems, FPGA, artificial intelligence, Internet of Things, and related multidisciplinary projects.

Computational Science and Its Applications -- ICCSA 2013 Beniamino Murgante, Sanjay Misra, Maurizio Carlini, Carmelo Maria Torre, Hong-Quang Nguyen, David Taniar, Bernady O. Apduhan, Osvaldo Gervasi, 2013-06-22 The five-volume set LNCS 7971-7975 constitutes the refereed proceedings of the 13th International Conference on Computational Science and Its Applications, ICCSA 2013, held in Ho Chi Minh City, Vietnam in June 2013. The 248 revised papers presented in five tracks and 33 special sessions and workshops were carefully reviewed and selected. The 46 papers included in the five general tracks are organized in the following topical sections: computational methods, algorithms and scientific applications; high-performance computing and networks; geometric modeling, graphics and visualization; advanced and emerging applications; and information systems and technologies. The 202 papers presented in special sessions and workshops cover a wide range of topics in computational sciences ranging from computational science technologies to specific areas of computational sciences such as computer graphics and virtual reality.

A Technological History of Cold-War India, 1947- 1969 William A.T. Logan,2021-11-01 This book provides a technological history of modern India, in particular the Nehruvian development in the context of the Cold War. Through a series of case studies about military modernization, transportation infrastructure, and electric power, it examines how the ideals of autarky and technological indigenization conflicted with the economic and political realities of the Cold War world. Where other studies tend to focus on the political leaders and economists who oversaw development, this book demonstrates how the perspective of the engineers, government bureaucrats, and aid workers informed and ultimately implemented development.

Disaster Management Handbook Jack Pinkowski,2008-01-22 Record breaking hurricane seasons, tornados, tsunamis, earthquakes, and intentional acts of mass-casualty violence, give lie to the delusion that disasters are the anomaly and not the norm. Disaster management is rooted in the fundamental belief that we can protect ourselves. Even if we cannot control all the causes, we can prepare and respond. We

Online Distance Education Margaret Gorts Morabito,1999 Many educators and the public are interested in online distance education, in particular Internet-based schooling. The underlying assumption is that this is a new and untested fad in education. This is due in part to a lack of documentation within academia of the early development of online distance education, and, in part, to a shortage of experienced, practicing online schools. On the Internet, one may become confused by the flurry of activity and by the various claims from organizations that they are providing a revolutionary method of instruction--online teaching. Furthermore, many people are unaware of the long and distinguished history of distance education itself that is the root of current day Internet-based schooling. Despite the uncertainty, the public is clearly demanding online distance education. This dissertation helps to resolve these problems. This study fills various needs for the purpose of showing the effective application of online distance education. Educational administrators, teachers, and the public must be assured that online distance teaching is a valid and proven instructional method. Furthermore, administrators and teachers need to know what to expect when planning, operating, and teaching in an online school. Through historical analysis and the presentation of a practicing Internet-based school, this study fills these needs. This dissertation results from fifteen years of independent study and research by the author, combined with professional experience in the field of online distance education, including Internet-based school design and operation. Conclusions result from published studies in distance education; from research conducted in the 1980s concerning publicly available online distance education; and from experience in developing, administrating, and teaching in an international, Internet-based school that has been in continual operation online since 1986. The author concludes that: (1) online distance education has a proven track record; (2) there is continual demand from the global community for Internet-based instruction, as well as a public demand for traditional institutions to accept this nontraditional method of study; and (3) administrators and teachers can economically create and operate an effective Internet-based school that is accessible to and affordable for individual learners using low-cost personal computers.

Open Access Neil Jacobs,2006-07-31 This book brings together many of the worlds leading open access experts to provide an analysis of the key strategic, technical and economic aspects on the topic of open access. Open access to research papers is perhaps a defining debate for publishers, librarians, university managers and many researchers within the international academic community. Starting with a description of the current situation and its shortcomings, this book then defines the varieties of open access and addresses some of the many misunderstandings to which the term sometimes gives rise. There are chapters on the technologies involved, researchers, perspectives, and the business models of key players. These issues are then illustrated in a series of case studies from around the world, including the USA, UK, Netherlands, Australia and India. Open access is a far-reaching shift in scholarly communication, and the book concludes by going beyond today's debate and looking at the kind of research world that would be possible with open access to research outputs. Chapters by leading experts in the field, including Professor Jean-Claude Guéhen, Clifford Lynch, Stevan Harnad, Peter Suber, Charles Bailey, Jr., Alma Swan, Fred Friend, John Shipp and Leo Waaijers Discussion of open access from a wide range of perspectives Country case studies, summarising open access in the USA, UK Netherlands, Australia and India
