The Nursing Informatics Implementation Guide Eleanor Callahan Hunt,Sara Breckenridge Sproat,Rebecca Rutherford Kitzmiller,2013-03-09 Health institutions are investing in and fielding information technology solutions at an unprecedented pace. With the recommendations from the Institute of Medicine around information technology solutions for patient safety, mandates from industry groups such as Leapfrog about using infor mation systems to improve health care, and the move toward evidence based practice, health institutions cannot afford to retain manual practices. The installation of multi-million dollar computerized health systems repre sents the very life blood of contemporary clinical operations and a crucial link to the financial viability of institutions. Yet, the implementation of health information systems is exceptionally complex, expensive and often just plain messy. The need for improvement in the art and science of systems implemen tation is clear: up to 70-80% of information technology installations fail. The reasons are multi-faceted, ranging from the complexity of the diverse workflows being computerized, the intricate nature of health organizations, the knowledge and skills of users to other reasons such as strategies for obtaining key executive support, weaving through the politics peculiar to the institution, and technical facets including the usability of systems. Thus, the art and science of successfully implementing systems remains deeply layered in elusiveness. Still, given the pervasiveness of system implementa tions and the importance of the outcomes, this is a critical topic, especially for nurses and informatics nurse specialists.

  Human Resource Development and Information Technology Catherine M. Sleezer,Tim L. Wentling,Roger L. Cude,2012-12-06 Technology, people, e-workplaces: these are the elements that fast moving organizations use to meet changing business requirements by using technology to invent new business processes, to re-align organizational structures, and to implement new management practices. Moreover, it has become apparent in today's global information economy, the most critical-indeed the primary-resource that distinguishes market leaders from everyone else is human talent! Countries, communities, and organizations are suddenly very interested in developing the human capacities that will allow them to compete in a networked world. Successful growing organizations have placed the combined development of information technology and human resources as their top priority. With the help of human resource professionals, organizations must grasp the pertinent aspects of both people and technology issues to create an effective e-workplace. These issues occur at the intersection of the

disciplines of computer science, operation research, and human resource development. Because these issues are complex, they can best be understood through cross-disciplinary collaboration among experts who approach them from a range of perspectives. Human Resource Development and Information Technology: Making Global Connections presents just such a collaborative effort from leaders in the field. This book describes the changes that are occurring as technology plays a more central role in human resource development. It compares methods and tools that organizations can use to create their own practices for developing their most critical resource-people! In addition, the authors pose a set of interesting research questions that will help us further explore how countries, local communities, and organizations build dynamic systems for developing a sustained competitive advantage with human talent.
