Disease Maps Tom Koch, 2011-06-30 In the seventeenth century, a map of the plague suggested a radical idea—that the disease was carried and spread by humans. In the nineteenth century, maps of cholera cases were used to prove its waterborne nature. More recently, maps charting the swine flu pandemic caused worldwide panic and sent shockwaves through the medical community. In *Disease Maps*, Tom Koch contends that to understand epidemics and their history we need to think about maps of varying scale, from the individual body to shared symptoms evidenced across cities, nations, and the world. *Disease Maps* begins with a brief review of epidemic mapping today and a detailed example of its power. Koch then traces the early history of medical cartography, including pandemics such as European plague and yellow fever, and the advancements in anatomy, printing, and world atlases that paved the way for their mapping. Moving on to the scourge of the nineteenth century—cholera—Koch considers the many choleras argued into existence by the maps of the day, including a new perspective on John Snow's science and legacy. Finally, Koch addresses contemporary outbreaks such as AIDS, cancer, and H1N1, and reaches into the future, toward the coming epidemics. Ultimately, *Disease Maps* redefines conventional medical history with new surgical precision, revealing that only in maps do patterns emerge that allow disease theories to be proposed, hypotheses tested, and treatments advanced.

Evaluating Participatory Mapping Software Charla M. Burnett, 2023-04-21 This volume provides a framework for evaluating geospatial software for participatory mapping. The evaluation is based on ten key indicators: ethics, cost, technical level, inclusiveness, data accuracy, data privacy, analytical capacity, visualization capacity, openness, and accessibility (i.e., mobile friendly or offline capabilities). Each application is evaluated by a user and cross analyzed with specific case studies of the software's real-world application. This framework does not discriminate against assessing volunteered geographic information (VGI) applications, as a form of participatory mapping, in circumstances that its application is spearheaded by underrepresented groups with the intent to empower and spark political or behavioral change within formal and informal institutions. Each chapter follows a strict template to ensure that the information

within the volume can be updated periodically to match the ever-changing technological environment. The book covers ten different mapping applications with the goal of creating a comparative evaluation framework that can be easily interpreted by convening institutions and novice users. This will also help identify gaps in software for participatory mapping which will help to inform application development in the future and updates to current geospatial software.

Biblical Studies on the Internet Roland H. Worth, Jr., 2008-09-18 The new edition includes more than 4,800 resources available at more

than 10,000 Internet sites that provide information on a range of biblical study topics including Bible translations in English and other languages, audio translations of the Bible in English and other languages, commentaries, dictionaries, and other resource materials including ones in Greek, Hebrew and other ancient languages. The author also has adopted a new method of referencing and cataloging the most widely used web pages to facilitate a major expansion of resources without increasing the physical length of the book itself. In cases when ten or more resources are listed on a single web page, the author has assigned the web page a three-digit code. The code is used to identify this web page as a major resource within the main text, while any needed instructions for use of the site are cross-referenced separately in the final chapter. In adopting this concise method, the author was able to add hundreds of additional or updated web resources, a surprising number of which can be downloaded onto a hard drive for immediate and continued use.

Social Studies Barbara Slater Stern, 2002 Introduces secondary social studies teachers to the goals and objectives of authentic instruction, a process in which the student is the active participant and the teacher a facilitator or guide, and provides lessons plans for themes related to the National Council of the Social Studies standards.

The Effects of Induced Hydraulic Fracturing on the Environment Matthew McBroom, 2013-12-07 This title includes a number of Open Access chapters. Hydraulic fracturing, or fracking as it is commonly known, refers to the practice of using liquids at very high pressures to fragment rock, thereby allowing natural gas to be harvested. This process increases energy resources but also has some negative environmental impacts as well. This book looks at the environmental

impact. The first section looks at fracturing and the water supply, the second section looks at ecosystems and wildlife, while the final section examines the possible effects on human ecosystems and human health.

Mapping the Risks John C. Baker,Beth E. Lachman,David R.

Frelinger,Kevin M. O'Connell,Alexander C. Hou,2004-04-02

Following the attacks of September 11, 2001, many agencies within the federal government began restricting some of their publicly available geospatial data and information from such sources as the World Wide Web. As time passes, however, decisionmakers have begun to ask whether and how such information specifically helps potential attackers, including terrorists, to select U.S. homeland sites and prepare for better attacks. The research detailed in this book aims to assist decisionmakers tasked with the responsibility of choosing which geospatial information to make available and which to restrict.

Introduction to the Applications of Mind Mapping in Medicine

José M. Guerrero, Pilar Ramos ,2015-01-02 This book is an

introduction to a group of techniques known as visual mapping and its application in medicine. The best known of these techniques is mind mapping (MM). Mind mapping is a very old technique that has been neglected in many professional areas. Our intention is to offer a book full of useful information to students and professionals of medicine in the application of mind mapping to their work, which we hope will stimulate greater use of this technique. We have been using mind mapping for more than twenty years in different fields, insurance, programming, banking, medicine, GIS, data visualization and, in general, in complex information analysis. Medicine is an important field where more applications are possible.

Mapping in Architectural Discourse Marc

Schoonderbeek,2021-11-29 This book explores the notion of mapping

in architectural discourse. First locating, positioning and theorizing mapping, it then makes explicit the relationship between research and design in architecture through cartography and spatial analysis. It proposes three distinct modalities: tool, operation and concept, showing how these methods lead to discursive aspects of architectural work and highlighting mapping as an instrument in developing architectural form. It emphasizes the importance of place and time as fundamental terms with which to understand the role of mapping. An investigation into architectural discourse, this book will appeal to academics and researchers within the discipline with a particular interest in theory, history and cartography.
