Achieving Transformation and Renewal in Financial Services Rohit Talwar, 1999-05-20 The rules for survival and success have never been so unclear, the choice of strategies so uncertain and the pressure to act quickly so immense. *Achieving transformation and renewal in financial services* focuses on cases and concepts that describe how leading players in financial services have addressed the challenges of organizational transformation and renewal. It is a practical handbook providing a rich and diverse set of case examples on how companies have been rethinking and reshaping their business operations to ensure they remain competitive into the 21st century. Rohit Talwar also considers some of the strategic implications of competing in a continuously changing 'wired world' and how to survive and thrive in such a turbulent environment.

Internet Based Learning Deanie French, 1999 This book is for every teacher or trainer-- whose computer skills may be limited-- who wants to understand the Internet educationally, and use it in his or her courses. As institutional pressures mount to integrate the Internet into teaching, this book provides a framework and a hands-on introduction to what's involved, whether it's adapting materials and teaching styles for the Web, or designing a virtual course. This book provides: + an introduction to the key educational concepts needed to adapt teaching methods and materials to the medium of the Internet + an introduction to both basic and advanced Internet skills--from using e-mail to collaborative

conferencing + a framework for harnessing the Internet to achieve educational goals, and successfully exploiting its resources, features and applications to promote effective learning The framework starts from the premise that teachers should progressively apply Internet technology as their skills and confidence develop. It develops the concept of augmented teaching styles- supplementing traditional teaching with Internet based options; demonstrates how to use modules as the building blocks for Web-based learning; and shows how to use the Internet to deliver individualized learning, by enhancing personal communication between teacher and student, and addressing the diversity of learning styles. The book abounds with inspiring and thought-provoking examples of Internet course materials developed by a wide variety of teachers and trainers, including modules and forms created by the authors who have extensive experience in delivering Internet-based courses. A glossary of terms and directory of Internet sites and resources complete the book, which is also supported by a related Web site.

Net-working Kwok-Wing Lai,1999 To Ruth Dallas, words are as much a part of the natural world as are beech trees, seashells and mountains. It is no accident, therefore, that much of her work should be rooted in the New Zealand landscape, reflecting its rhythms, seasons, its benevolence and its harshness, and its effect on men and women.

The Subjective Self Harwood Fisher, 2001-01-01
For all their strides in understanding how we create and think about cultures, psychologists, linguists, and logicians have had difficulty explaining how we conceive our selves?how the self can, in fact, be both the object and the subjective originator of its surroundings. Harwood Fisher's purpose in this far-reaching, interdisciplinary book is to depict the subjective self in its true complex duality. In *The Subjective Self*, Fisher argues that the key to depicting both aspects of the self simultaneously and thus modeling it more holistically than before is to visualize the self in a logical space. From an origin point inside this space, the self tries out metaphors and launches categories to logically order what it wants, sees, and encounters. This is a creative cognitive process, metaphoric framing,

by which the self invents new forms and depicts new organizations of its experiences, impressions, and information. It is also a generative linguistic process, bracketing, by which the self can step outside its own expressed thoughts, gain new levels of awareness, re-position itself as an agent responsible for its ideas and statements, and, in short, empower its own identity. The framing sets in motion versatile mental categories?forms that are projected into mental space, where they become objectified. The bracketing sets in motion the logical bounds of the I, stabilizing the individual's identity and giving thrust to the subjective self's dynamic causal role. In elaborating this theory, Fisher extends the ideas of Kurt Lewin, Jean Piaget, and C. S. Peirce, among others. By drawing on each of these thinkers, he is able to bring their common themes of perspective and construction together in his portrait of the self as a creative iconic space.

Machines That Become Us James E. Katz, 2017-07-28
Social critics and artificial intelligence experts have long prophesized that computers and robots would soon relegate humans to the dustbin of history. Many among the general population seem to have shared this fear of a dehumanized future. But how are people in the twenty-first century actually reacting to the ever-expanding array of gadgets and networks at their disposal? Is computer anxiety a significant problem, paralyzing and terrorizing millions, or are ever-proliferating numbers of gadgets being enthusiastically embraced? *Machines that Become Us*

explores the increasingly intimate relationship between people and their personal communication technologies. In the first book of its kind, internationally recognized scholars from the United States and Europe explore this topic. Among the technologies analyzed include the Internet, personal digital assistants (PDAs), mobile phones, networked homes, smart fabrics and wearable computers, interactive location badges, and implanted monitoring devices. The authors discuss critical policy issues, such as the problems of information resource access and equity, and the recently discovered digital dropouts phenomena. The use of the word become in the book's title has three different meanings. The first suggests how people use these technologies to broaden their abilities to communicate and to represent themselves to others. Thus the technologies become extensions and representatives of the communicators. A second sense of become applies to analysis of the way these technologies become physically integrated with the user's clothing and even their bodies. Finally, contributors examine fashion aspects and uses of these technologies, that is, how they are used in ways becoming to the wearer. The conclusions of many chapters are supported by data, including ethnographic observations, attitude surveys and case studies from the United States, Britain, France, Italy, Finland, and Norway. This approach is especially valuable

American Buddhism Christopher Queen, Duncan Ryuken Williams, 2013-10-18 This is the first scholarly treatment of the emergence of American Buddhist Studies as a significant research field. Until now, few investigators have turned their attention to the interpretive challenge posed by the presence of all the traditional lineages of Asian Buddhism in a consciously multicultural society. Nor have scholars considered the place of their own contributions as writers, teachers, and practising Buddhists in this unfolding saga. In thirteen chapters and a critical introduction to the field, the book treats issues such as Asian American Buddhist identity, the new Buddhism, Buddhism and American culture, and the scholar's place in American Buddhist Studies. The volume offers complete lists of dissertations and theses on American Buddhism and North American

dissertations and theses on topics related to Buddhism since 1892.
