A Manager's Primer on e-Networking Dragan Nikolic, 2012-09-10 The implementation of Enterprise Networks or e-Networking is of paramount importance for organisations. Enterprise-wide networking would warrant that the components of information architecture are organised to harness more out of the organisation's computing power on the desktop. This would also involve establishment of networks that link the various but important subsystems of the enterprise. Our firm belief is that in order to gain a competitive edge the organisations need knowledge and sound strategy. This conviction is particularly true today, considering the pressures from international competition, environmental concerns and complicated ethical issues. This book, entitled A Manager's Primer on e-Networking, negotiates the hyper dimensions of the Internet through stories from myriad of Web sites with its fluent presentation and simple but chronological organisation of topics highlighting numerous opportunities and providing a solid

starting point not only for inexperienced entrepreneurs and managers but anyone interested in applying information technology in the business. I sincerely hope the book will help as well many small and medium size companies and organisations to launch corporate networking successfully in order to attain their strategic objectives. **Advances in Modeling and Management of Urban Water Networks** Alberto Campisano, Enrico Creaco, 2021-01-06 The Special Issue on Advances in Modeling and Management of Urban Water Networks (UWNs) explores four important topics of research in the context of UWNs: asset management, modeling of demand and hydraulics, energy recovery, and pipe burst identification and leakage reduction. In the first topic, the multi-objective optimization of interventions on the network is presented to find trade-off solutions between costs and efficiency. In the second topic, methodologies are presented to simulate and predict demand and to simulate network behavior in emergency scenarios. In the third topic, a methodology is presented for the multi-objective optimization of pump-as-turbine (PAT) installation sites in transmission mains. In the fourth topic, methodologies for pipe burst identification and leakage reduction are presented. As for the urban drainage systems (UDSs), the two explored topics are asset management, with a system upgrade to reduce flooding, and modeling of flow and water quality, with analyses on the transition from surface to pressurized flow, impact of water use reduction on the operation of UDSs, and sediment transport in pressurized pipes. The Special Issue also includes one paper dealing with the hydraulic modeling of an urban river with a complex cross-section.

**Applied Microbial Systematics** F.G. Priest, Michael Goodfellow, 2012-12-06 Modern approaches to microbial classification and identification, particularly those based on nucleic acid analysis, have raised the awareness and interest of microbiologists in systematics during the past decade. The extended scope of the subject has revolutionized microbial ecology with the demonstration of uncultivable microorganisms as a major component of the biosphere and evolution, with the ribosomal RNA phylogenetic tree as the basis of current classifications. However, advances in microbial systematics have also had enormous impact on other, diverse aspects of microbiology such as animal pathogenicity, plant-microbe interactions and relationships with food. In this book, we survey and discuss in depth the contribution of modern taxonomic approaches to our understanding of the microbiology of these various systems. The book does not concentrate on methods - these have been well reported elsewhere - instead it provides a unique insight into the application and value of modern systematics in diverse branches of microbiology. It will be of value to microbiologists at both research and technical levels who need to appreciate the range of organisms with which they work and the diversity within them. It will also be of value to teachers and students of microbiology courses who want to understand how systematics can enhance microbiology beyond the routine of classification, nomenclature, and identification.

Conventions, Treaties And Other Responses To Global Issues - Volume II Gabriela Maria Kutting, 2009-08-25 Conventions, Treaties and other Responses to Global Issues is a component of Encyclopedia of Institutional and Infrastructural Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. This theme Conventions, Treaties and other Responses to Global Issues deals with the issue of international resource regimes. These are formal responses by states to the threats posed by trans-boundary pollution or the distribution of resources. In the past thirty years the number of international environmental agreements has steadily risen to reach record numbers and these agreements have secured a firm place in the hierarchy of international affairs. There is a loose assumption that this is a good thing and that this rise has resulted in a commensurable improvement in environmental protection and resource allocation. But is this actually the case? In fact, is there a positive correlation at all? Or are there negative correlations? What are the connections between environmental diplomacy and environmental protection and how can environmental protection be achieved? These are just a few of the questions that will be addressed in this theme, whilst at the same time giving an overview of the most important international resource regimes and the most influential international

organizations having an environmental impact. The theme takes the following shape: the first section introduces issues of international environmental law and its history, showing that international law can take many different forms. Here we explain what policy tools states have in drafting responses to global environmental issues. The second section deals with the most prominent international environmental agreements and gives a state of the art overview of existing regimes. The third and last section of this theme introduces the key actors in the international arena besides states, such as international organizations and civil society actors, such as pressure groups. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.
