Creating Web Sites: The Missing Manual Matthew MacDonald,2005-10-26 Think you have to be a technical wizard to build a great web site? Think again. For anyone who wants to create an engaging web site--for either personal or business purposes--Creating Web Sites: The Missing Manual demystifies the process and provides tools, techniques, and expert guidance for developing a professional and reliable web presence. Like every Missing Manual, you can count on Creating Web Sites: The Missing Manual to be entertaining and insightful and complete with all the vital information, clear-headed advice, and detailed instructions you need to master the task at hand. Author Matthew MacDonald teaches you the fundamentals of creating, maintaining, and updating an effective, attractive, and visitor-friendly web site--from scratch or from an existing site that's a little too simple or flat for your liking. Creating Web Sites: The Missing Manual doesn't only cover how to create a well-designed, appealing, smart web site that is thoroughly up to date and brimming with the latest features. It also covers why it's worth the effort by explaining the rationale for creating a site in the first place and discussing what makes a given web site particularly aesthetic, dynamic, and powerful. It further helps you determine your needs and goals and make well informed design and content decisions. Creating Web Sites: The Missing Manual includes a basic primer on HTML, working with JavaScript, and incorporating services like Paypal's shopping cart, Amazon's associate program, and Google AdSense and AdWords. It delivers advanced tricks for formatting, graphics, audio and video, as well as Flash animation and dynamic content. And you'll learn how to identify and connect with your site's audience through forms, forums, meta tags, and search engines. This isn't just another dry, uninspired book on how to create a web site. Creating Web Sites: The Missing Manual is a witty and intelligent guide for all of you who are ready to make your ideas and vision a web reality.

Xhtml Jitendra Patel,2013-05-22 XHTML XHTML is a markup language for Web pages from the W3C(World Wide Web Consortium). XHTML combines HTML and XML into a single format (HTML 4.0 and XML 1.0). Like XML, XHTML can be extended with proprietary tags. Also like XML, XHTML must be coded more rigorously than HTML. Over the years, HTML coders have become sloppy, because Web browser software was originally written to tolerate many variations in HTML coding, but, with XHTML, coders must conform to the XML rules. In one sentence we can say that XHTML is a superset of HTML, but unlike HTML it is stricter to rules and requires a document to follow XML rules. Whereas HTML is an application of SGML, a very flexible markup language, XHTML is an application of XML, a more restrictive subset of SGML. Because they need to be well-formed, true XHTML documents allow for automated processing to be performed using standard XML tools unlike HTML, which requires a relatively complex, lenient, and generally custom parser. XHTML can be thought of as the intersection of HTML and XML in many respects, since it is a reformulation of HTML in XML.

Structure from Motion in the Geosciences Jonathan L. Carrivick,Mark W. Smith,Duncan J. Quincey,2016-07-15 Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and, with multi-temporal data, to detect elevation, position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including

available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment and includes case studies that have been contributed by experts from around the world.

Blazing Star, Setting Sun Jeffrey Cox,2020-06-25 From popular Pacific Theatre expert Jeffrey R. Cox comes this insightful new history of the critical Guadalcanal and Solomons campaign at the height of World War II. Cox's previous book, Morning Star, Rising Sun, had found the US Navy at its absolute nadir and the fate of the Enterprise, the last operational US aircraft carrier at this point in the war, unknown. This second volume completes the history of this crucial campaign, combining detailed research with a novelist's flair for the dramatic to reveal exactly how, despite missteps and misfortunes, the tide of war finally turned. By the end of February 1944, thanks to hard-fought and costly American victories in the first and second naval battles of Guadalcanal, the battle of Empress Augusta Bay, and the battle of Cape St George, the Japanese would no longer hold the materiel or skilled manpower advantage. From this point on, although the war was still a long way from being won, the American star was unquestionably on the ascendant, slowly, but surely, edging Japanese imperialism towards its sunset. Jeffrey Cox's analysis and attention to detail of even the smallest events are second to none. But what truly sets this book apart is how he combines this microscopic attention to detail, often unearthing new facts along the way, with an engaging style that transports the reader to the heart of the story, bringing the events on the deep blue of the Pacific vividly to life.
