Theories of Mathematics Education Bharath Sriraman, Lyn English, 2009-10-13 *Advances in Mathematics Education* is a new and innovative book series published by Springer that builds on the success and the rich history of ZDM—The International Journal on Mathematics Education (formerly known as Zentralblatt für - daktik der Mathematik). One characteristic of ZDM since its inception in 1969 has been the publication of themed issues that aim to bring the state-of-the-art on central sub-domains within mathematics education. The published issues include a rich variety of topics and contributions that continue to be of relevance today. The newly established monograph series aims to integrate, synthesize and extend papers from previously published themed issues of importance today, by orienting these issues towards the future state of the art. The main idea is to move the field forward with a book series that looks to the future by building on the past by carefully choosing viable ideas that can fruitfully mutate and inspire the next generations. Taking inspiration from Henri Poincaré (1854-1912), who said “To create consists precisely in not making useless combinations and in making those which are useful and which are only a small minority.

Build a Co-Parenting Team Peter K. Gerlach, MSW, Peter K. Msw, 2003-03-24 Note: links below connect to the non-profit educational Break the Cycle! Web site (Formerly Stepfamily Information). Close the pages or use your browser's back button to return here. Typical multi-home stepfamilies are riddled with conflicts between three or more co-parents and their relatives over child discipline, nutrition, visitations, custody, hygiene, religion, schooling, holidays, loyalties, expenses, names, responsibilities, and other topics. The scope, complexity, and persistence of these disputes among ex mates, stepparents, and relatives can significantly contribute to eventual re/divorce. (The / notes it may be a stepparent's first union). This guidebook is part of a series intended to help co-parents and supporters overcome five common hazards that combine to (1) promote epidemic U.S. re/divorce, and (2) pass on significant psychological wounds to vulnerable children. The hazards are: co-parents' shared unawarenesses and ignorance of key information; plus... unseen psychological wounds from low-nurturance childhoods; plus... incomplete or blocked grief in kids and/or adults, which inhibits new bonds and adult intimacy; plus... courtship neediness and romantic illusions; plus... little informed stepfamily help in the media and local community. Typical nuclear stepfamilies include three or more co-parents (bioparents and stepparents) and several minor kids shuttling between two or more homes: Parenting effectively in this environment is far more complex than in traditional intact biological families - which catches typical co-parents and relatives by surprise. Why this book (and series)? Families exist to nurture - i.e. to fill key needs of their kids and adults. Most U.S. stepfamilies follow the divorce of one or both new mates, most of whom are parents. Divorce suggests that their kids weren't well nurtured in their first family, and have many concurrent developmental + special needs to fill in their complex stepfamily.

Handbook of Research on Entrepreneurship Policies in Central and Eastern Europe Friederike Welter, David Smallbone, 2011 This unique Handbook explores the role of government in the development of entrepreneurship in countries where twenty years ago private enterprise was illegal or barely tolerated. The expert contributors reveal that government policy is one of the key influences on the external environment in which businesses develop, particularly in countries where it has been necessary to redefine the role of the state in relation to business development. They outline how government policy can also act as an enabling and/or a constraining force with respect to entrepreneurship development, particularly in

relation to institutional change and the development of a market-based economy. This Handbook includes up-to-date information and analysis as to how entrepreneurship policies have evolved in the wider Europe, focusing on the challenges that arise in designing and implementing entrepreneurship policy. The Handbook of Research on Entrepreneurship Policies in Central and Eastern Europe excellently covers different facets of entrepreneurship policies in Central and Eastern Europe and will prove invaluable for academics, students and researchers of entrepreneurship and small business as well as policy studies. Policy makers will also find plenty of key insights and relevant information in this important resource.

The Internet Literacy Handbook Betsy Burdick, Chris Coakley, Janice Patricia Richardson, 2006-01-01 Over the past decade, Internet technology, now merging into that of mobile technology, has transformed the multiple facets of life in society across the world, changing work and leisure patterns, and placing greater demands on us as active, democratic citizens. The Internet literacy handbook, intended for parents, teachers and young people throughout Europe, is a guide to exploiting to the fullest this complex network of information and communication. The handbook is comprised of 21 fact sheets, each covering a particular topic on Internet use, from searching for information to setting up blogs through to e-shopping and e-citizenship. These fact sheets offer teachers and parents sufficient technical know-how to allow them to share young people's and children's voyages through communication technology. They highlight ethical and safety considerations, give insight into added value in education, provide ideas for constructive activities in class or at home, share best practice in Internet use, and provide a wealth of definitions and links to sites that give practical examples and further in-depth information.

Objectivism and the Corruption of Rationality Scott Ryan, 2003-01-27 Ayn Rand presented Objectivism as a philosophy of reason. But is it? That is the question Scott Ryan seeks to answer in this careful examination of the Objectivist epistemology and its alleged sufficiency as the philosophical foundation of a free and prosperous commonwealth. Sorting painstakingly through Rand's writings on the subject, Mr. Ryan concludes that the epistemology of Objectivism is incoherent and debases both the concept and the practice of rationality.

The Problems of Philosophy Bertrand Russell, 2010-06 *The Problems of Philosophy* is a 1912 book by Bertrand Russell, in which the author attempts to create a brief and accessible guide to the problems of philosophy. Bertrand Russell, in full Bertrand Arthur William Russell, 3rd Earl Russell of Kingston Russell, Viscount Amberley of Amberley and of Ardsalla, (born May 18, 1872, Trelleck, Monmouthshire, Wales--died February 2, 1970, Penrhyndeudraeth, Merioneth), British philosopher, logician, and social reformer, founding figure in the analytic movement in Anglo-American philosophy, and recipient of the Nobel Prize for Literature in 1950. Russell's contributions to logic, epistemology, and the philosophy of mathematics established him as one of the foremost philosophers of the 20th century. To the general public, however, he was best known as a campaigner for peace and as a popular writer on social, political, and moral subjects. During a long, productive, and often turbulent life, he published more than 70 books and about 2,000 articles, married four times, became involved in innumerable public controversies, and was honoured and reviled in almost equal measure throughout the world. Russell was born in Ravenscroft, the country home of his parents, Lord and Lady Amberley. His grandfather, Lord John Russell, was the youngest son of the 6th Duke of Bedford. In 1861, after a long and distinguished political career in which he served twice as prime minister, Lord Russell was ennobled by Queen Victoria, becoming the 1st Earl Russell. Bertrand Russell became the 3rd Earl Russell in 1931, after his elder brother, Frank, died childless. Russell's early life was marred by tragedy and bereavement. By the time he was age six, his sister, Rachel, his parents, and his grandfather had all died, and he and Frank were left in the care of their grandmother, Countess Russell. Though

Frank was sent to Winchester School, Bertrand was educated privately at home, and his childhood, to his later great regret, was spent largely in isolation from other children. Intellectually precocious, he became absorbed in mathematics from an early age and found the experience of learning Euclidean geometry at the age of 11 as dazzling as first love, because it introduced him to the intoxicating possibility of certain, demonstrable knowledge. This led him to imagine that all knowledge might be provided with such secure foundations, a hope that lay at the very heart of his motivations as a philosopher. His earliest philosophical work was written during his adolescence and records the skeptical doubts that led him to abandon the Christian faith in which he had been brought up by his grandmother. In 1890 Russell's isolation came to an end when he entered Trinity College, University of Cambridge, to study mathematics. There he made lifelong friends through his membership in the famously secretive student society the Apostles, whose members included some of the most influential philosophers of the day. Inspired by his discussions with this group, Russell abandoned mathematics for philosophy and won a fellowship at Trinity on the strength of a thesis entitled *An Essay on the Foundations of Geometry*, a revised version of which was published as his first philosophical book in 1897. Following Kant's *Critique of Pure Reason* (1781, 1787), this work presented a sophisticated idealist theory that viewed geometry as a description of the structure of spatial intuition.
