Windows XP Cookbook Robbie Allen, Preston Gralla, 2005-08-08 Each year, Windows XP is pre-installed on 30 million PCs sold in the U.S.--and 90 million worldwide--making it the world's most popular operating system, and proving to frustrated users everywhere that preponderance does not equate to ease of use. There are literally thousands of programs, tools, commands, screens, scripts, buttons, tabs, applets, menus, and settings contained within Windows XP. And it has only been in the last couple of years that Microsoft's documentation has actually been more of a help than a hindrance. But it still isn't enough. Windows XP users and administrators need a quick and easy way to find answers. Plenty of books go into detail about the theory behind a particular technology or application, but few go straight to the essentials for getting the job done. Windows XP Cookbook does just that, tackling the most common tasks needed to install, manage, and support Windows XP. Featuring a new twist to O'Reilly's proven Cookbook formula, this problem-solving guide offers multiple solutions for each of its 300-plus recipes. Solve dilemmas with the graphical user interface, the command line, through the Registry, or by using scripts. Each step-by-step recipe includes a discussion that explains how and why it works. The book is also among the first to cover Microsoft's XP Service Pack 2. With these practical, on-the-job solutions, Windows XP Cookbook will save you hours of time searching for answers. Windows XP Cookbook will be useful to anyone that has to use, deploy, administer, or automate Windows XP. But this isn't a typical end-user book; it covers the spectrum of topics involved with running Windows XP in both small and large environments. As a result, IT professionals and system administrators will find it a great day-to-day reference. And power users will find Windows XP Cookbook a great source for information on tweaking XP and getting the most out of their systems. The bottom line is that Windows XP Cookbook will make just about anyone who uses XP more productive.

Psychology of Decision Making in Legal, Health Care and Science Settings Gloria R. Burthold, 2007 In a fast-moving world, the necessity of making decisions, and preferably good ones, has become even more difficult. One reason is the variety and number of choices perhaps available which often are

not presented or understood. Alternatives are often unclear and complex paths to them confusing and misleading. Thus the process of decision making itself requires analysis on an ongoing basis. Decision making is often made based on cultural factors whereas the best alternative might be quite different. The subject touches ethical aspects as well as psychological considerations. This book presents important research on the psychology of decision making related to law and law enforcement, health care and science.

Global Standard Setting in Internet Governance Alison Harcourt,George Christou,Seamus Simpson,2020-01-31 The book addresses representation of the public interest in Internet standard developing organisations (SDOs). Much of the existing literature on Internet governance focuses on international organisations such as the United Nations (UN), the Internet Governance Forum (IGF) and the Internet Corporation for Assigned Names and Numbers (ICANN). The literature covering standard developing organisations has to date focused on organisational aspects. This book breaks new ground with investigation of standard development within SDO fora. The book lifts the lid on internet standard setting with detailed insight into a world which, although highly technical, very much affects the way in which citizens live and work on a daily basis. In doing this it adds significantly to the trajectory of research on Internet standards and SDOs that explore the relationship between politics and protocols. The analysis contributes to academic debates on democracy and the internet, global self-regulation and civil society, and international decision-making processes in unstructured environments. The book advances work on the Multiple Streams Framework (MS) by applying it to decision-making in non-state environments, namely SDOs which have long been dominated by private actors. The book is aimed at academic audiences in political science, computer science communications and science and technology studies as well as representatives from civil society, the civil service, government, engineers and experts working within SDO fora.
