Industrial Perspectives of Safety-critical Systems Felix Redmill,Tom Anderson,2012-12-06 This book contains the Proceedings of the 6th Safety-critical Systems Symposium, the theme of which is Industrial Perspectives. In accordance with the theme, all of the chapters have been contributed by authors having an industrial affiliation. The first two chapters reflect half-day tutorials - Managing a Safety-critical System Development Project and Principles of Safety Management - held on the first day of the event, and the following 15 are contributed by the presenters of papers on the next two days. Following the tutorials, the chapters fall into five sub-themes - the session titles at the Symposium. In the first of these, on 'Software Development Technology', Trevor Cockram and others report on the industrial application of a requirements traceability model, Paul Bennett on configuration management in safety-critical systems, and Brian Wichmann on Ada. The next 5 chapters are on 'Safety Management'. In the safety domain, the fundamental business of management is increasingly being addressed with respect not merely to getting things done, but also to controlling the processes by which they are done, the risks involved, and the need not only to achieve safety but to demonstrate that it has been achieved. In this context, Gustaf Myhrman reveals recent developments for safer systems in the Swedish Defence, and Shoky Visram reports on the management of safety within a large and complex Air Traffic Control project.

Computational Science – ICCS 2003 Peter M.A. Sloot,David Abramson,Alexander V. Bogdanov,Jack J. Dongarra,Albert Y. Zomaya,Yuriy E. Gorbachev,2003-08-03 Some of the most challenging problems in science and engineering are being addressed by the integration of computation and science, a research field known as computational science. Computational science plays a vital role in fundamental advances in biology, physics, chemistry, astronomy, and a host of other disciplines. This is through the coordination of computation, data management, access to instrumentation, knowledge synthesis, and the use of new devices. It has an impact on researchers and practitioners in the sciences and beyond. The sheer size of many challenges in computational science dictates the use of supercomputing, parallel and distributed processing, grid-based processing, advanced visualization and sophisticated algorithms. At the dawn of the 21st century the series of International Conferences on Computational Science (ICCS) was initiated with a first meeting in May 2001 in San Francisco. The success of that meeting motivated the organization of the second meeting held in Amsterdam April 21–24, 2002, where over 500 participants pushed the research field further. The International Conference on Computational Science 2003 (ICCS 2003) is the follow-up to these earlier conferences. ICCS 2003 is unique, in that it was a single event held at two different sites almost opposite each other on the globe – Melbourne, Australia and St. Petersburg, Russian Federation. The conference ran on the same dates at both locations and all the presented work was published in a single set of proceedings, which you hold in your hands right now.

Personalisation Peter Beresford,2014-03-01 Personalization has become a social policy buzzword in the twenty-first century as many organizations move steadily away from one-size-fits-all models of service. In this provocative book, Peter Beresford is joined by other top academics to challenge the personalization agenda. Although critical of one-size-fits-all approaches, they contend that personalization turns service users into consumers who are shopping in a care market. This does not facilitate better attunement to user needs, they argue, but an increased commodification of care that actually channels large profits toward a decreasing number of providers at the expense of service quality. A timely debate in an era when public programs are deeply embattled, Personalisation is a careful work of critical policy assessment.

Everyday Law for Individuals with Disabilities Ruth Colker,Adam A. Milani,2015-11-17 If you are an individual with a disability and believe you have been discriminated against, it is often hard to find a lawyer to help remedy your situation. Accordingly, 'self-help' may often be your most, or your only, viable strategy. But how to proceed? This book serves as a badly needed practical guide to disability discrimination law. Covering a wide range of issues faced by individuals with different kinds of disabilities, it not only describes those individuals' legal rights but also suggests solutions to disability discrimination issues that are more practical and less expensive than filing a lawsuit. Written by two disability law experts, Ruth Colker, whose son is developmentally disabled, and Adam Milani, who is paralyzed from the chest down, this book is informed by their scholarly expertise but is also based on their collective practical experience from years of navigating issues of disability discrimination. *Everyday Law for Individuals with Disabilities* is the first in a series of practical guides to the law, organized by series editors Richard Delgado and Jean Stephancic, packed with useful overviews and advice for the people who need it most and can least afford it.
