**Shared Print Repositories** Karen S. Fischer, Faye A.

Chadwell, 2015-09-07 The chapters in this book address the growing endeavours of shared print repositories and programs in academic libraries, representing a global perspective with authors from Canada, Australia, Great Britain, and the United States. This book illustrates the complicated processes and challenges of coordinating selection, determining storage agreements (distributed or shared), ownership concerns, business models, and a host of collection maintenance issues. These efforts entail immense collaboration, regardless of the size of the project. Luckily, librarians are good at collaboration, but not always good at forging ahead into an uncertain future with regard to print collections. As echoed by authors in this book, the future is indeed uncertain, but undoubtedly libraries who partner together to address print archiving dilemmas will be better prepared for whatever the future holds. This book was originally published as a special issue of Collection Management.

*Who Owns the World's Media?* Eli M. Noam, The International Media Concentration Collaboration, 2015-12-07 Media ownership and concentration has major implications for politics, business, culture, regulation, and innovation. It is also a highly contentious subject of public debate in many countries around the world. In Italy, Silvio Berlusconi's companies have dominated Italian politics. Televisa has been accused of taking cash for positive coverage of politicians in Mexico. Even in tiny Iceland, the regulation of media concentration led to that country's first and only public referendum. *Who Owns the World's Media?* moves beyond the rhetoric of free media and free markets to provide a dispassionate and data-driven analysis of global media ownership trends and their drivers. Based on an extensive data collection effort from scholars around the world, the book covers thirteen media industries, including television, newspapers, book publishing, film, search engines, ISPs, wireless telecommunication and others, across a ten to twenty-five year period in thirty countries. In many countries--like Egypt, China, or Russia--little to no data exists and the publication of these chapters will become authoritative resources on the subject in those regions. After examining each country, Noam and his collaborators offer comparisons and analysis across industries, regions, and development levels. They also calculate overall national concentration trends beyond specific media industries, the market share of individual companies in the overall national media sector, and the size and trends of transnational companies in overall global media. This definitive global study of the extent and impact of media concentration will be an invaluable resource

for communications, public policy, law, and business scholars in doing research and also for media, telecom, and IT companies and financial institutions in the private sector.

Mac OS X has become the dominant OS on the Macintosh platform and is currently the default OS on all new Macintosh computers. One of the book's major strengths is the extensive coverage of iTunes, iPhoto, iDVD, and iMovie. QuickTime and QuickTime Pro are also covered. *Ethical Decision Making in School Mental Health* James C. Raines, Nic T. Dibble, 2010-09-30 Ethical predicaments are endemic for mental health professionals working in a host setting like schools. New interventions, evolving technologies, and a patchwork of ethical guidelines and legal codes create a constant stream of new ethical dilemmas. Quick answers and simple solutions are rare, but with the seven-stage model presented here, readers will learn to apply an ethical decision-making process that minimizes their liability while better protecting their students. Beginning with an introduction to the moral, legal, and clinical foundations that undergird ethical practice, the authors outline an ethical decision-making process to handle conundrums that includes seven major steps: know yourself, analyze the dilemma, seek consultation, identify courses of action, manage the clinical concerns, enact the decision, and reflect on the

process. Each chapter describes these steps in detail, provides case examples to illustrate their application, and presents exercises that encourage readers to integrate them into their everyday practice. This handy guide is written for the school social workers, school psychologists, school nurses, and school counselors who are responsible for acting in their students' best interests, as well as post-secondary students studying to enter one of these professions. It will be a trusted resource for school services professionals seeking clear but nuanced guidance in resolving thorny ethical issues.

**What is a Crime?** Law Commission of Canada, 2004 We all have notions of what it means to commit a crime. Most of us are very much aware of the behaviours which, by law, constitute crime. Rarely, however, do we stop to consider why certain activities and behaviours are deemed criminal and others are not. A brilliant and provocative volume, *What Is A Crime?* forces us to reconsider both how we define criminal conduct in contemporary society, and how we respond to it once it has been identified. Drawing from diverse scholarly traditions -- including law, sociology, criminology and socio-legal studies -- contributors to this collection reflect on the processes of defining crime, and consider the varied and complex implications of our decisions to criminalize certain unwanted behaviour. Employing various case studies, the contributors reflect on the social processes that inform definitions of crime, criminal law, and its enforcement, while illuminating the subjective nature of crime and questioning the role of law in dealing with complex social issues. Collectively, the authors provide a critical dialogue on law and governance in contemporary society. *What Is A Crime?* will be of interest to a broad spectrum of readers with an interest in the governance of crime and its control in contemporary society. Students and scholars of law, sociology, political science, philosophy, and criminology will find this book invaluable in furthering their understanding of the processes of defining and responding to crime and criminal behaviour. It will also hold sway with policymakers, criminal justice practitioners, and anyone with a stake in our current approaches to crime.

**Medical Professionalism in the New Information Age**  
David J. Rothman, David Blumenthal, 2010-08-19 With computerized health information receiving unprecedented government support, a group of health policy scholars analyze the intricate legal, social, and professional implications of the new technology. These essays explore how Health Information Technology (HIT) may alter relationships between physicians and

patients, physicians and other providers, and physicians and their home institutions. Patient use of web-based information may undermine the traditional information monopoly that physicians have long enjoyed. New IT systems may increase physicians' legal liability and heighten expectations about transparency. Case studies on kidney transplants and maternity practices reveal the unanticipated effects, positive and negative, of patient uses of the new technology. An independent HIT profession may emerge, bringing another organized interest into the medical arena. Taken together, these investigations cast new light on the challenges and opportunities presented by HIT.

*Handbook of Electronic Security and Digital Forensics* Hamid Jahankhani, 2010 The widespread use of information and communications technology (ICT) has created a global platform for the exchange of ideas, goods and services, the benefits of which are enormous. However, it has also created boundless opportunities for fraud and deception. Cybercrime is one of the biggest growth industries around the globe, whether it is in the form of violation of company policies, fraud, hate crime, extremism, or terrorism. It is therefore paramount that the security industry raises its game to combat these threats. Today's top priority is to use computer technology to fight computer crime, as our commonwealth is protected by firewalls rather than firepower. This is an issue of global importance as new technologies have provided a world of opportunity for criminals. This book is a compilation of the collaboration between the researchers and practitioners in the security field; and provides a comprehensive literature on current and future e-security needs across applications, implementation, testing or investigative techniques, judicial processes and criminal intelligence. The intended audience includes members in academia, the public and private sectors, students and those who are interested in and will benefit from this handbook.
