Cases on Research-Based Teaching Methods in Science Education de Silva, Eugene, 2014-08-31 While the great scientists of the past recognized a need for a multidisciplinary approach, today's schools often treat math and science as subjects separate from the rest. This not only creates a disinterest among students, but also a potential learning gap once students reach college and then graduate into the workforce. *Cases on Research-Based Teaching Methods in Science Education* addresses the problems currently facing science education in the USA and the UK, and suggests a new hands-on approach to learning. This book is an essential reference source for policymakers, academicians, researchers, educators, curricula developers, and teachers as they strive to improve education at the elementary, secondary, and collegiate levels.

Paths to Learning Barbara F. Tobolowsky, 2014-09-17 Higher education institutions are more diverse than ever before, as are the students they serve. Because of this great diversity, there is no silver bullet—one approach—that will work for teaching all students in all circumstances. This book offers a succinct description of several pedagogical paths available to faculty that can actively engage all students. In addition to providing the most recent information on learning and assessment, individual chapters tackle different approaches, including critical pedagogy, contemplative pedagogy, strengths-based teaching, and cooperative/collaborative learning. While the discussion is grounded in theory, authors present examples of applying these approaches in physical and virtual learning environments. *Paths to Learning* is a valuable overview of engaging pedagogies for educators seeking to sharpen their teaching skills, which in turn, will help students become more confident and successful learners.

Psychoanalytic Energy Psychotherapy Phil Mollon, 2018-03-26 People like to talk. We know that talking to an attentive and thoughtful listener can be helpful in clarifying conscious and unconscious feelings, thoughts, and

motivations. But is talk enough? The complex physiology of anxiety and traumatic stress reactions is often stubbornly persistent, despite therapeutic exploration in both conscious and unconscious areas of the mind. In the case of severe trauma, talking can stir up the emotions and associated bodily disturbance without providing any resolution – sometimes leaving clients feeling worse. The developing field of energy psychology offers an entirely new perspective and gamut of techniques for locating where these traumatic patterns are encoded. They are not in the mind – but in the energy system at the interface of psyche and soma. By addressing these realms concurrently, a powerful therapeutic synergy emerges that allows rapid and deep shifts in the patterns of distress that drive the psychosomatic system.
