Maoism in India Bidyut Chakrabarty,Rajat Kumar Kujur,2009-12-04 The rise of Maoism as one of the organized political movement in India is the outcome of a historical situation. Both colonialism and the failure of the Indian state to implement land reforms more stringently in the aftermath of independence resulted in terrible sufferings of the marginalized, land- dependent, sections of society. Through historical analysis, this book assesses the ideological articulation of the contemporary ultra-left movement in India, including Maoism which is expanding gradually in India. The author provides answers to the following issues: Is Maoism reflective of the growing disenchantment of the people in the affected areas with the state? Is it a comment on ‘the distorted development planning’ pursued by the Indian state? Is this an outcome of the processes of ‘deepening of democracy’ in India? Using Orissa as a case study, the book raises questions on India’s development strategy. The author argues that Maoism provides critical inputs for an alternative paradigm for development, relevant for ‘transitional societies’ and that it is a still a powerful ideology for the poorer parts of the world although its ideological appeal has declined internationally.

Psychological Experiments on the Internet Michael H. Birnbaum,2000-04-18 Until recently, most psychological research was conducted using subject samples in close proximity to the investigators--namely university undergraduates. In recent years, however, it has become possible to test people from all over the world by placing experiments on the internet. The number of people using the internet for this purpose is likely to become the main venue for subject pools in coming years. As such, learning about experiments on the internet will be of vital interest to all research psychologists. Psychological Experiments on the Internet is divided into three sections. Section I discusses the history of web experimentation, as well as the advantages, disadvantages, and validity of web-based psychological research. Section II discusses examples of web-based experiments on individual differences and cross-cultural studies. Section III provides readers with the necessary information and techniques for utilizing the internet in their own research designs. Innovative topic that will capture the imagination of many readers Includes examples of actual web based experiments

By using cut-and-paste templates from familiar software programs, readers can create complex websites in short order—without learning confusing HTML coding. Three final chapters cover using style sheets, address the potential benefits of HTML5, and overview content management system based websites. By using this guidebook as a reference, even those without previous knowledge about web design will possess enough basic information to create a great web page—and, with a little practice, prepare a full library website.

Life Cycle Networks Frank-Louthar Krause,G. Seliger,2012-12-06 The globalisation of markets and the expansion of product responsibility into the entire product life cycle lead to an increasing competitive situation for nationally and internationally operating companies. Therefore, to win this competition the use of the most effective and efficient resources regarding the whole product life cycle is necessary. Since these resources are globally distributed the different tasks both within a phase of product life cycle and those spread over different phases are distributed as well. The global interference of these tasks requires a close multilateral co-operation of the companies concerned. Current information- and communication technologies and modern management concepts offer high potentials to meet these requirements. The international seminar of CIRP on Life Cycle Engineering titled Life Cycle Networks was a forum for the presentation and discussion of current research work and recent advancements on these strategic issues for current and future engineering. Complex requirements and innovative solutions to support and realise Life Cycle Networks has been revealed and summerised. The employment of information technology to support both specific phases of product life cycle and holistic approaches will be the main focus. This volume contains the papers presented at the seminar which provide opportunities to identify the state-of-the-art and address future needs. The parts in this volume correspond to the sessions of the seminar and are presented under the following headings: Life Cycle Management; Life Cycle Design; Design for Environment; Design for Recycling; Life Cycle Assessment; Disassembly; IT-Networks.

Global Perspectives on E-Learning Alison A. Carr-Chellman,2004-12-15 Global Perspectives on E-Learning: Rhetoric and Reality presents several cases of international online education and the rhetoric that surrounds this form of teaching and learning. Editor Alison A. Carr-Chellman examines the impact of online distance education throughout the world in an effort to understand more deeply the merits of such initiatives. Written from a critical perspective, the book sheds light on some of the problems faced by international distance educators. It particularly focuses on who benefits, and who does not, by the advance of international e-learning and how we can respond to the needs of the disenfranchised. This book is intended to supplement what has to this point been largely a positive, how-to literature in distance education. It offers a balanced perspective on the problems and possibilities of distance education worldwide.

Educational Media and Technology Yearbook Michael Orey,V. J. McClendon,Robert Maribe Branch,2009-05-28 The Educational Media and Technology Yearbook has become a standard reference in many libraries

and professional collections. Examined in relation to its companion volumes of the past, it provides a valuable historical record of current ideas and developments in the field. Part I, “Trends and Issues,” presents an array of chapters that develop some of the current themes listed above, in addition to others. Part II, “Library and Information Science,” concentrates upon chapters of special relevance to K-12 education, library science education, school learning resources, and various types of library and media centers—school, public, and academic among others. In Part III, “Leadership Profiles,” authors provide biographical sketches of the careers of instructional technology leaders. Part IV, “Organizations and Associations in North America,” and Part V, “Graduate Programs in North America,” are, respectively, directories of instructional technology-related organizations and institutions of higher learning offering degrees in related fields. Finally, Part VI, the “Medi- raphy,” presents an annotated listing of selected current publications related to the field. For a number of years we have worked together as editors and the sixth with Dr. Michael Orey as the senior editor. Last year as the senior editor, Orey decided to try and come up with a list of the top programs rather than just the list of all the programs. This has proven to be problematic. First of all, bias exists when we are rating a field in which our program is within those to be rated.

Intern Programs as a Human Resources Management Tool for the Department of Defense Susan M. Gates, Christopher Paul, 2004 The Department of Defense faces a challenge: how to replace a large number of retiring civilian workers and provide the larger civilian workforce likely to be needed for the impending U.S. military transformation's new force structure. One goal in meeting this challenge is to find effective recruitment methods. The authors offer policy recommendations for DoD intern programs based on interviews with managers of public- and private-sector intern programs, literature reviews, and personnel data analyses.

Animal Health at the Crossroads National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Assessing the Nation's Framework for Addressing Animal Diseases, 2005-12-17 The confirmed case of mad cow disease (BSE) in June 2005 illustrates the economic impact of disease outbreaks, as additional countries closed their markets to U.S. beef and beef products. Emerging diseases also threaten public health—11 out of 12 of the major global disease outbreaks over the last decade were from zoonotic agents (that spread from animals to humans). *Animal Health at the Crossroads: Preventing, Detecting, and Diagnosing Animal Diseases* finds that, in general, the U.S. animal health framework has been slow to take advantage of state-of-the-art technologies being used now to protect public health; better diagnostic tests for identifying all animal diseases should be made a priority. The report also recommends that the nation establish a high-level, authoritative, and accountable coordinating mechanism to engage and enhance partnerships among local, state, and federal agencies, and the private sector.

The Guidebook of Federal Resources for K-12 Mathematics and Science, 1998 Contains directories of federal agencies that promote mathematics and science education at elementary and secondary levels; organized in sections by agency name, national program name, and state highlights by region.
